This transition—the switch from manual to automated production—will take place rapidly in the years ahead—the displacement and realinement will be extensive and sudden. And this suddenness makes the problem acute. To survive this change, the vast majority of the thousands of workers involved in it must receive more formal education as well as new kinds of occupational training. Evidence of this is already appearing in the current listings by the Department of Labor of jobs which are now in short supply. Of the 60 skills for which there is a shortage of qualified candidates, each of them requires a high school education.

The evidence is abundant and clear that education and job skills are the keys to steady employment. Records of the Labor Department[6] show that the rate of unemployment among unskilled workers in industry is more than five times that of professional and technical workers.

Concurrently with the dramatic changes occurring in science and technology, and tied in closely with them, have come equally rapid and extensive changes in longstanding patterns of home and family living in America. Child-parent relationships, relationships between individuals and groups, between institutions and government, and between the citizen and the community are becoming increasingly complex. The same individuals who find themselves caught in the swirl of technological revolution and who need reeducation as workers also find themselves increasingly in need of reeducation as individuals, as parents, and as citizens as well. This, then, is the third dimension of the educational task ahead. Happily, we know that industry as well as other community agencies and organizations will help greatly with it through stepped-up programs of in-service education and training. They are already doing a great deal of this. But the nature and scope of the problem are such as to make it a public responsibility; the welfare of manifold thousands of individual citizens requires this; the Nation's economy demands it.

Many other aspects of this problem are crying for better statesmanship than we have hitherto given them, but time permits me to mention but one other. This has to do with the changing composition of our population and with the aged who constitute an increasing percentage of it. In my early childhood, when the total population of this country was 76 millions, the number of people over 65 years of age was slightly more than 3 million. By 1950, the total population had doubled, but the number of people over 65 had more than quadrupled—to over 12 million. Today, the number of people over 65 exceeds 15 millions and is increasing at the rate of more than 300,000 a year. By 1975, we shall have more than 21 million people over 65 years of age.

Advances in medical science, better control of communicable diseases, improved nutrition, and generally higher standards of living are making us a nation of older and older people. The record of man's life expectancy in the United States clearly shows how this is true. In the year 1800, man's life expectancy at birth in the United States was 30 years. In 1900, it was 47 years. By 1960, it had jumped to well above 70 years. Thus, during our lifetime, man's life expectancy in the United States has increased over 33 years. Many scientific investigators are predicting that by the year 2000 (40 years from now) life expectancy in the United States will be 100 years, and that the normal life span of civilized man may well approach 150 years.

Footnotes at end of speech.

With the encouraging predictions of an ever-increasing life expectancy, and with the prospect of a 24- to 30-hour workweek, it may well be that in the years ahead leisure and not labor will be the chief problem in our lives. The preparation of people of all ages for worthy use of this greatly increased amount of nonworking time and the retention of older individuals in socially useful roles, constitutes a great challenge for education.

Another aspect of this is the fact that down through the years the older group in our adult population has consistently been the less educated group. This is understandably so, and until recent years it was of little public concern.

Now, however, it is a different matter. In an age of change such as we now find ourselves, it is essential that public policy be responsive to and give direction to this change if we are to avoid its hazards and realize the greatest benefit from it as a Nation and as a people. The aged, particularly the less educated, tend to resist change. With a larger and larger proportion of our adult population falling into the older age brackets, it is inevitable that public policy will increasingly be influenced by the older segment of our population. Herein lies one of the greatest challenges of all for American education. Enlightened public policy is a product of an enlightened people. In the space age ahead, neither the young nor the old can expect to be enlightened without continuing education.

The sum total of everything I have said thus far is this: To an extent that we may fail to recognize or be unwilling to admit, many an American citizen is in trouble. In many cases, his occupational skills have become outmoded in a wave of technological change without parallel in human history. He is being forced to live a new kind of life, equipped only with old patterns of behavior. Material splendor and increased leisure time have not always brought him social tranquility or personal peace of mind—they have only given him more time to ponder his dilemma. This, I realize, is not a pleasant picture. But there is entirely too much truth in it for us as educators to remain comfortable much longer.

Mr. Khrushchev, on several occasions recently, has stated emphatically that he intends to outstrip us economically, productionwise and otherwise. The Soviet economy is being geared toward these ends. This is their dedicated and avowed purpose. The Soviet Government recognizes in a very realistic way the importance of education to this purpose. Dr. Robert Luke of the NEA who has recently returned from Russia tells us that they have already stamped out adult illiteracy, and that the education of adults academically, vocationally, and culturally, is now an organized, systematic and determined effort on the part of the Soviet Government. They have a purpose and they know what it is—they want to be the No. 1 world power—and they are driving hard toward that objective.

In a free society which is dedicated to the worth and dignity of the individual and to the growth and development of the human personality, the very process of education becomes an end into itself. This is implicit in our dedication to the cause of freedom. Ignorance and human dignity are incompatible. This fact, in and of itself, should be sufficiently compelling to establish throughout America the concept that continuing education for all citizens, regardless of age, is a public necessity and a public responsibility. The words of Premier Khrushchev add to these motivations the question of our very survival as a nation. This is real. It is crucial. And time is important.

Last year I read a statement by John Gardner, president of the Carnegie Corp. in which he said: "If we believe what we profess concerning the worth of the individual, then the idea of individual fulfillment within a framework of moral purpose must become our deepest concern, our national preoccupation, our passion, our obsession."[7] I heartily concur in this feeling, and for that reason I think that every State in this Nation should have a legal framework within which adult education can function as an integral part of its public educational system. It is essential that it be given integral status, for only by weaving it into the very fabric of State school law will there ever be a sufficient public commitment to it, and financial support of it, to assure its continuation and the fulfillment of its purpose. Such a step is both logical and inevitable. Adult education is, in reality, the fourth level of public education into which elementary, secondary, and higher education lead. It is the remaining major step that we must take to round out our educational needs as a nation and as a people. Never before in our history has the urgency of this step been so great as it is at the present time. And the first step in that direction is for the profession itself to recognize this fact and get busy. It is both disturbing and difficult to understand reports which occasionally come to me to the effect that progress toward the addition of adult education service to our public school program is being inhibited by professional educators themselves who in their shortsightedness fear that such a step would weaken the public effort toward the education of children to which we have long been committed. On this point, I should like to share with you a recent statement by Gov. LeRoy Collins of our State who has, throughout his public career, demonstrated a strong personal commitment to education at all levels:

"Perhaps we have not been too clear in our understanding of the function of adult education and of its relationship to programs for the education of children. It is the adult population that is immediately facing the problems of adjustment to changing agricultural, industrial, commercial, economic, and cultural conditions. They are the voting citizens and upon their wisdom depends the fate of our political life. Is there not then a possibility that a program of reeducation for them is an economy measure, instead of an expense, inasmuch as it should add immediately to their productivity, health, and effectiveness as citizens? Is it not possible that reeducated adults will give to their children richer cultural advantages which will be reflected in the quality and quantity of learning which our children will obtain in their regular schooling? The relationship between the cultural level of a community and the educational outcomes of schooling is a well-known fact."

My experience convinces me that enactment of the kind of legislation we have suggested, legislation which will make it possible for every community in every State to provide a well-rounded program of education for all of its citizens who desire it and who can benefit from it, depends in large measure upon professional leadership working in cooperation with organized groups of lay citizens. This professional leadership must exist at all levels—national, State, and local—if we hope to get the job done. The chief State school officer in every State is a key individual in this effort. With a strong commitment on his part, and a willingness to voice it, progress will be easier.

These are our larger needs—our overall objectives. What are our responsibilities along the way?

Wherever public school adult education programs are in operation, or wherever new ones are initiated, there are certain responsibilities which a local superintendent of schools has which deserve serious consideration. The first of these has to do with the selection and assignment of competent, professionally trained leaders for these programs. The organization, planning, and day-to-day administration of educational programs involving mature, voluntary participants requires specialized skills which come only through specialized professional training. The effectiveness of adult programs in terms of their fundamental purposes will inevitably be in proportion to the quality of leadership we select and assign to them. For us to foist off on the adult citizens of our communities who seek to continue their education the misfits and the unsuccessful administrators and teachers from other parts of the school system, is not only an admission of weakness on our part as chief school officers in the communities we serve—it is the surest way I know of undermining and weakening public support of our entire school program. After all, these people whose intelligence we insult by assigning to them the castoffs and misfits are the very same people who must vote the taxes to support our schools. It is their children we teach in the daytime. How better can we expect to receive their enthusiastic support of and willingness to pay for a good overall school program than by giving them good school experiences themselves? And how quicker can we expect to lose their support than to make their personal experiences unrewarding?

As school administrators we must unify our efforts toward getting the higher institutions to give greater attention to the need for more highly trained administrators and teachers for these programs. We need more professors in colleges of education who have outstanding abilities as administrators and teacher trainers for the expanding public school adult education programs throughout the Nation. The need is not limited to that of preparing full-time adult education administrators and teachers which is customarily and properly carried on at the graduate levels. Far from it. The majority of the thousands of teachers in adult education are part-time teachers, and most of these are regular, full-time day teachers of our children and youth. They need special orientation and preparation, however, to be good teachers of adults. Is it not logical and desirable, therefore, that in the course of their professional preparation programs at our colleges and universities, they should at least be given a good basic orientation to the particular skills and requirements for this kind of service? Superintendents of schools can exert great influence toward bringing this about.

My observation indicates that local superintendents frequently overlook one of the most natural and effective ways of interpreting their total school program to their communities. This is one of the many ways in which adult education can serve all of education. Through specially arranged seminars, forums, lecture series, discussion groups, and other special activities dealing with educational issues, particularly those with local orientation, the local adult education program can render an extremely valuable service in keeping the public informed about their schools. Professionally trained adult educators are expert at identifying and tapping community resources for education. Here is a means by which the school system can involve as both leaders and learners many citizens of the community, and through cosponsorship of educational activities, it can involve many organized community groups in overall support of the community school program.

An important responsibility of the superintendent of schools, both at the State level as well as at the local level, is that of providing an organizational structure within which adult education can function effec-

---

Footnotes at end of speech.

tively. Its organizational setting should be such as will facilitate the development and effectiveness of the program, and give it the visibility and status it deserves as a major segment of the total school program.

The superintendent also has the responsibility for the formulation and establishment of appropriate policies and priorities which serve to guide the development of adult education programs. He has the responsibility for establishing a proper framework of operating policies which will assure an overall cohesiveness and continuity of his total educational program. Staff coordination and planning are essential to these ends, and where adult education programs operate under public school auspices, it is important that the director of this program, as a member of the superintendent's staff, participate in the same manner and on a level of comparable responsibility and status as those of his colleagues representing other levels of the educational program. In addition to this, the superintendent has the continuing responsibility of working with his director of adult education and with advisory groups of lay citizens in the formulation and establishment of adult education program priorities, and in the development of appropriate criteria by which the priority classification and method of financing of specific program offerings may be determined. The superintendent holds the final responsibility to assure that his adult program activities are in the public interest and are characterized by substantial educational content, widespread application, and social usefulness. This is essential to the development of local programs if they are to be truly attuned to community needs and receive community support and participation.

In conclusion, I feel that I must comment on a certain word that appeared in the title of the topic assigned to me this evening. The word is "adequate." We have discussed the changing nature of our society and the demands this places upon individuals of all ages and in all walks of life to continue the systematic pursuit of knowledge. We have discussed some of the apparent dimensions of the task of providing opportunities for continued learning for all of our citizens. We have mentioned certain responsibilities which school administrators have, particularly superintendents of schools, for providing adequate programs of adult education. But what is an adequate program, you may ask.

I would not presume to be able to tell you what constitutes an adequate program of adult education for your community. Such a program is one which must grow out of the needs of individual citizens of the particular community it serves, and at the same time it must provide the kinds of education which our society requires of these citizens for its own growth and improvement. Obviously, the educational needs of individuals vary from one community to another, and also the priorities assigned to specific needs will vary because of variations in the intensity of individual needs between communities. The result is, therefore, that no program of adult education can be adequate unless tailored specifically to fit the community it seeks to serve.

An inherent desire toward self-improvement and a better life is a basic motive of man. As individuals, our preoccupations tend to be those of improving our physical well-being and enjoyment of life, resolving our psychic disturbances, and enhancing our relationships with others. Adult education programs must be geared to these broad areas of human interest and need by providing program activities which are designed to help adults in an educational way to improve themselves as individuals, as parents, as workers, and as citizens.

To meet the challenge of the space age, the curriculum of adult education will have to provide studies in subjects as current as the morning headlines and as old as organized knowledge; as functional as the skills of a new job and as rewarding as the humanities; as vital as pending legislation and as sensitive as human relations; as close as a community problem and as remote as a missile's orbit; as intimate as family living and as public as international peace; as elementary as the three R's and as advanced as the educational needs of the adult community it proposes to serve.

If we are willing to consolidate our resources and put forth the effort, we can make it so.

Have you ever had the experience of seeing a man 60 years old, upon the realization that he could read and write for the first time, stand before you with tears of satisfaction streaming down his cheeks?

I have.

Have you ever attended a banquet of prison inmates who were members of an agriculture class specializing in ornamental horticulture, where the toastmaster was a young man who had been sentenced to death and had served 32 months in the death house before having his sentence commuted to life imprisonment?

I have.

Have you ever visited a class of adults between the ages of 21 and 55—with most of these men having families, but exhibiting the courage to attend school late in the afternoons or at nights to complete third-grade work?

I have.

I would like to paraphrase a statement made by Eddie Rickenbacker, after his miraculous rescue from what seemed certain death at sea during the last World War, when he said, "If you have not had any experience with God in your life, my advice is to get busy and get yourself one."

If you, as an educator, have not had experience with all types of adults in education, my advice is to get busy and get yourself such experience.

Then you will provide adequate adult education in your school system.

ROTC in High Schools

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. STEED. Mr. Speaker, under leave to extend my remarks, I introduce an editorial from the Stillwater (Okla.) News-Press of February 10, by Mr. Marsden Bellatti, suggesting the possible expansion of the ROTC program in high schools:

BETTER PLAN

Although there is every valid reason to oppose Federal aid to education there is a way to have the socialistic feature without the socialistic overtones and resulting Central Government control.

If Members of Congress are truly concerned about the youth of the Nation and the lack of proper training there is a readymade program available that can be adapted to serve the Nation's best interests. Too few high schools offer the ROTC program. Congress could enact legislation agreeing to pay rent and upkeep for high school that make the ROTC part of the regular training for high school boys. The instructors could be drawn from the ranks of the Reserve and the men and officers teaching would receive credit for advancement and retirement. Surely men in the Reserve would be glad to give an hour or two a week to a ROTC program in their hometown high school.

The worth of the ROTC has been established beyond a shadow of a doubt but the only trouble is that it does not reach enough of the Nations' youth. A minimum of 3 hours of class work plus 2 hours of drill in a week would do a great deal toward inculcating in the Nation's youth the worth of military defense and pride in Nation. The summer camps could be held on the university campuses with dormintory space that is normally vacant in the summer months.

The cost of the ROTC program in the high schools would not be excessive and the local schools that want to take rent money from the Armed Forces could use those funds as the school boards desired. Probably a great deal of the funds would go into salaries for teachers, and that would be fine just so long as there is no Federal control over school boards and teachers.

Letters Concerning American-Flag Aircraft Carriers

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I submit herewith two letters I have received from one of my constituents.

These letters clearly show the adverse situation in which American-flag aircraft carriers have been placed.

I sincerely commend these letters to the attention of my colleagues:

SARATOGA, CALIF., *January 21, 1960.*

Representative CHARLES S. GUBSER,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE GUBSER: I have been an airline pilot employed by Pan American Airways for the past 5 years. During this period, I have witnessed a continuing deterioration of my employer's position in international aviation. In spite of my chat with President Eisenhower a few weeks ago on television, the most reliable source at my disposal informs me that I am to enter the era of the "rosy 60's" without a job.

Had this situation arisen from my company's inability to survive in a competitive

free enterprise system, I would not be addressing you at this time. Pan Am has been a leader in the industry since its inception and its list of "firsts" are second to none. Its eagerness to continue is evidenced by an investment of nearly $300 million in jet transports. My concern over Pan Am's list of "lasts" is motivating this letter to you. Particularly being last after all foreign airlines to receive equitable consideration by my own Government.

A basic precept of the Civil Aeronautics Act of 1938, restated in the Federal Aviation Act of 1959, calls for the Government to "encourage and develop an air transportation system adapted to the present and future needs of the foreign and domestic commerce of the United States, of the postal service, and of the national defense." By any stretch of the imagination, can you reconcile this statement of purpose with the following facts:

1. U.S.-flag airlines carried 73 percent of the North Atlantic traffic in 1947, and carried 46 percent in 1958.

2. Of the airlines that have routes circling the globe, two are allowed to cross the United States from San Francisco to New York—Australia's Quantas and Britain's BOAC.

3. In 1945, nine carriers served Latin America. In 1958, approximately 60 were in the race.

4. Air France, Alitalia, BOAC, Iberia Air Lines KLM, Lufthansa, Quantas, REAL Airlines, Sabena Belgian World Airlines, and Swissair are either negotiating or already flying from coast to coast in the United States while Pan American has been repeatedly denied the right to do so.

Not only does my Government allow and encourage foreign airlines growth at my company's expense, but they do so without regard to an equitable bilateral agreement. An example of this is the concession given to KLM in flying to New York. In 1956, Pan Am's total revenue from Amsterdam amounted to nearly $108,000—KLM's total revenue out of New York for that same period was in excess of $12 million. I've been told that the Civil Aeronautics Board recognizes this inequity and has before its members a proposal to extend KLM's route to include Houston and Los Angeles.

It would be tolerable if all my company had to do was to compete with foreign airlines, largely owned by their respective governments and flown without regard to a profit-and-loss statement. But to have my company compete with these foreign governments plus my own government is absurd.

In the middle of this hodgepodge of international aviation routes we encounter the world's largest airline, the Military Air Transport Service. MATS with its 1,400 airplanes and a yearly operating budget of $700 million does 90 percent of its flying over routes already served by scheduled U.S.-flag carriers. These carriers could assume nearly all of the operations performed by MATS at no greater cost to the taxpayer. Obviously there is a need for a military transport system, but the system has been allowed to grow way out of proportion to the need. Aviation Week magazine, September 21, 1959, describes the overwhelming size of this system. "U.S.-flag carriers handled 6.8 percent of all worldwide international air freight during 1958 as compared with 56.7 percent carried by MATS, 36.5 percent by foreign-flag lines. MATS handled 9.8 percent of all international passenger traffic during that year as compared with 15 percent by U.S.-flag airlines, 75.2 percent by foreign-flag lines."

In view of the above, is it any wonder that to a degree, I hold my Government responsible for the fact that my job is in jeopardy? Fortunately, there is a movement in Washington aimed at taking some of the necessary steps at regaining American prestige in international aviation. Senator MONRONEY is planning to introduce his "Air Merchant Marine" bill during this session of Congress. I urge you to consider and support this bill when it appears.

Any support you can lend to a reorientation of State Department policy in bilateral negotiations with foreign-flag airlines would be greatly appreciated.

I would also appreciate hearing your views and intentions concerning international aviation. I'm interested in knowing if my Government intends to continue its trend of nonsupport to its own flag carriers; if so, my most advantageous move is to join a foreign-flag airline.

Sincerely,

RICHARD L. ZARONES.

SARATOGA, CALIF., *February 19, 1960.*
Representative CHARLES S. GUBSER,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE GUBSER: Thank you for your letter of January 25 and the interest shown toward the pilots of Pan American. Realizing that my individual effort would be greatly augmented, I would appreciate your inserting my letter into the CONGRESSIONAL RECORD.

During the past weeks, a few items have come to my attention which I believe should interest you.

MATS, in an effort to justify the size of their aircraft fleet, is transporting nonessential and unbelievable cargo by air. An example: MATS No. 80406, C-97 type, transited Wake Island on December 9, 1959, carrying a cargo entirely made up of 94-pound sacks of portland cement.

Japan is engaged in applying Government pressure to inhibit Pan Am's jet operation in the Pacific. The Japanese Government has already approached the U.S. Embassy on this issue. This is the sort of action that in the past has led to Government intervention which has curtailed my advancement and is presently placing my job in jeopardy.

Recently, the State Department denied KLM the privilege of a Polar route operation from Amsterdam to Los Angeles. I believe this is the first time that the State Department has seen the inequalities inherent in such proposed bilateral trade agreements and has taken a definite stand. Now I understand that the individuals involved in the decision are under pressure of attack from various quarters of the political arena. I urgently petition you and your colleagues to support and command such action as the State Department took. A passive position will only allow the United States to be relegated to a secondary position in international air commerce comparable to that of our maritime industry.

I mention these events in order to give you a little more background and inspiration for some corrective action. I deeply appreciate what you are doing at present and hope that you can provide some relief for the frustration being dealt to me by my Government.

Sincerely,

RICHARD L. ZARONES.

Health of the Aged—H.R. 4700

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. FORAND. Mr. Speaker, under leave to extend my remarks I include a letter that appeared in the San Francisco Chronicle, of February 11, 1960.

It is my belief that the writer of this letter, Mrs. Leah Lachenbruch, views the Forand bill in the proper perspective. The letter follows:

HEALTH OF THE AGED

EDITOR: Our experience bears out the truth of Mr. Kuplan's statement, quoted in your editorial, "Health of the Aged," that "a pitifully small percentage of the aged are covered by any health insurance" and "that a pitifully large number cannot afford to buy the medical care they need."

We believe the Forand bill is the logical extension of the Social Security Amendment of 1956 which provided disability insurance. At present, many persons receiving OASI, when needing hospitalization or nursing home care, must either go without it or apply for public assistance, thus diminishing State and county welfare funds and overcrowding county hospitals and nursing homes.

The Forand bill is not socialized medicine. Under its terms, patients are free to choose their own hospitals, nursing homes and surgeons. In no place does the bill propose establishing Government hospitals or using doctors paid by the Government.

Furthermore, as the cost of medical care of all kinds continues to increase, more and more OASI beneficiaries will be considered medically indigent and entitled to care in county hospitals, etc. It seems to us that payment of medical care out of Government tax funds is more socialistic than the purchase of medical care by beneficiaries with OASI insurance funds.

MRS. LEAH LACHENBRUCH,
Chairman of Legislation, Santa Clara Chapter, Association of Social Workers
MENLO PARK.

Jewish Memorial Hospital Community Mental Health Program

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ZELENKO. Mr. Speaker, it is with pride that I inform the Congress of the initiation of a new and vital project in the district which I have the honor to represent. Cognizant of the need of service in the field of mental health, two great institutions, supported and maintained solely by the voluntary contributions of dedicated citizens have joined in providing this vital health service to our community. It is an example which could well be emulated throughout the country.

The background and aims of the project were ably recorded in the New York Post of February 12, 1960. The article follows:

UPTOWN Y, HOSPITAL JOIN IN MENTAL HEALTH PROGRAM

An expanded mental health program that will set a new pattern in community teamwork is being launched in the Upper Manhattan-Riverdale area through the cooperation of Jewish Memorial Hospital, 196th Street and Broadway, and the neighboring Washington Heights and Inwood YM-YWHA, 54 Eagle Avenue.

The project, which provides for use of Y facilities for out-patients of the hospital's

mental health clinic and for referral by the Y of those in need of such services, was announced jointly by Dr. Hans L. Epstien, executive director of the Y, and by Louis Miller, director of the hospital.

The plan for the expanded program was conceived when Jewish Memorial Hospital found it had inadequate room to handle the out-patients who came to its rapidly growing clinic. The board of trustees of the Y offered the use of the adjacent Y building to the hospital, as a service to the community.

BOTH OVER 50 YEARS OLD

Both institutions have been in the uptown community for more than 50 years. The Washington Heights-Inwood Y, founded 51 years ago, which occupies a building constructed 3 years ago, is affiliated with the Federation of Jewish Philanthropies. Jewish Memorial, a voluntary, nonsectaria institution, observes its 55th anniversary this year.

Space will be made available at the Y for adult and children's group counseling, play therapy and psychological testing. Jewish Memorial's psychiatrists, psychologists, and social service workers will staff the clinic. The services of the clinic will be available to adults and children from the community on a nonsectarian basis.

Dr. Epstein and Mr. Miller observed that this was "the first joint venture in the mental health field involving a hospital and a community center in this area." They regard it as setting a precedent for further cooperative activities among the health and community institutions of northern Manhattan.

THREE HUNDRED THOUSAND IN AREA

"This cooperative program," said Miller, "has been developed out of our awareness of the inadequate facilities for mental health care for residents of the big area that Jewish Memorial Hospital serves. As our health clinic developed over the years, we found it necessary to enlarge the space allotted for this program, as well as to devise procedures for making its services more readily accessible in a growing community of over 300,000 people."

Dr. Epstein explained that it has been the practice of the Y to work cooperatively with the Jewish Family Service and the Jewish Board of Guardians in meeting the mental health needs of its people, adding:

"We of the Washington Heights-Inwood Y have long been conscious of the need for people in this neighborhood to have access to mental health consultation and care within the community. This project will enable us to broaden our mental health services in association with a hospital that has long been active in this field."

Information about the new service may be obtained from the social service department of Jewish Memorial Hospital.

New York Mirror's National Outdoor Exposition

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call the attention of my colleagues to an event which is taking place in New York at this time.

The New York Daily Mirror should be congratulated for establishing what has now become a national institution. I refer to the National Outdoor Exposition currently on view at the Coliseum in New York City.

Without doubt this is the finest sports, travel, vacation, and outdoor show ever assembled. It has so many great attractions that it would be difficult to list them all. Not only has one of America's great newspapers taken the initiative to stage this great showcase of the pleasurable facets of the American way of life; but it has philanthropically permitted all the proceeds to go to the Mirror's Youth Welfare Fund which in itself has and will continue to provide a fine public service in an area where assistance is needed most—to guide and mold the youth of our Nation into better future adult citizens of our beloved country.

I sincerely wish that such an exhibition as the New York Mirror's National Outdoor Exposition could be sent abroad to the free countries as well as those behind the Iron Curtain. Our neighbors could then realize that what we live and work for here in the United States is worthwhile and that the kind of enjoyment we earn with the fruits of our labor is one of the greatest dimensions of human freedom.

I invite my colleagues in the Congress to come to New York City over the weekend, the show runs through February 28, and enjoy themselves as much as I did at the National Outdoor Exposition.

This is the perfect place to turn for a respite from the many weighty problems that concern us all.

As the Mirror points out:

Never before have we found ourselves with so much time on our hands. It's estimated we now have 2,229 hours each year in which to do nothing but enjoy ourselves. Every third day for average family is a play day. With incomes at alltime highs, average working hours meshed to the 5-day week and vacations extended to 3 weeks, countless more American families today can afford the leisure they like best.

I am sure each Congressman will find something of his home territory represented in the National Outdoor Exposition. The Mirror has said that the show has something for everyone. It certainly does and if I were to choose the "something" I saw there, I would say it is "Americanism at its very best."

Statement of Attorney General A. S. Harrison Jr., of Virginia

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. ABBITT. Mr. Speaker, the Senate Rules and Administration Committee has been holding hearings on certain so-called civil rights bills. In my opinion this is a great misnomer.

On February 5, 1960, the Honorable A. S. Harrison, Jr., attorney general of Virginia, filed with the committee a most forceful and outstanding statement in opposition to the proposal of the Attorney General of the United States to amend the Civil Rights Act of 1957 by providing for court appointment of U.S. voting referees, and for other purposes. The statement points out cogently the many dangers to our people and the sovereignty of our States of the new proposal.

General Harrison is highly regarded and recognized as one of the ablest constitutional lawyers of Virginia.

I commend the statement to every Member of this House and urge that you read it carefully and with an open mind so that you may know what the Attorney General of the United States of America is trying to foist upon the people of this Nation. If enacted, the legislation will result in carpetbag rule not only in the South but in the entire Nation in years to come.

Mr. Speaker, under leave to extend my remarks, I include the statement of the Honorable A. S. Harrison, Jr., attorney general of Virginia, which is as follows:

STATEMENT OF ATTORNEY GENERAL A. S. HARRISON, JR., OF VIRGINIA, SUBMITTED TO THE RULES AND ADMINISTRATION COMMITTEE OF THE U.S. SENATE, WASHINGTON, D.C., FEBRUARY 5, 1960, IN OPPOSITION TO THE PROPOSAL OF THE ATTORNEY GENERAL OF THE UNITED STATES TO AMEND THE CIVIL RIGHTS ACT OF 1957 BY PROVIDING FOR COURT APPOINTMENT OF U.S. VOTING REFEREES, AND FOR OTHER PURPOSES

Mr. Chairman, and members of the Rules and Administration Committee of the Senate, my name is A. S. Harrison, Jr., and I am the attorney general of the Commonwealth of Virginia. I am presently serving a 4-year term which began on January 11, 1958. Prior to that time I was a member of the Senate of Virginia for 10 years. I regret that because of a recent illness I was unable to testify in person before this committee, and thank you for the opportunity you have given me to submit this statement.

On January 26, 1960, the Attorney General of the United States made public the text of a bill prepared by the Department of Justice to deal with alleged racial discrimination in both Federal and State elections. Technically, the bill in question would amend the Civil Rights Act of 1957 by adding a new subsection to 42 U.S.C.A. 1971, as amended. Essentially, the proposed amendment would authorize Federal district courts, acting in voting rights cases instituted by the Attorney General under the provisions of 42 U.S.C.A. 1971(c), to appoint voting referees to determine whether or not certain persons making application to them are qualified to vote in any election and to certify as such all persons found by the referees to be so qualified.

The report of a voting referee, unless "clearly erroneous," would be binding upon the court, which would then be required to issue a supplementary decree specifying that the persons named therein are entitled to vote. In addition, the court is empowered to direct the voting referees, or such other person or persons as it may appoint, to attend any election at which a person named in the court's decree is entitled to vote, and report to the court whether any such person has been denied the right to vote or to have his vote properly counted. Certified copies of the court's original decree and any supplementary decrees would be transmitted by the Attorney General to the appropriate election officials of the State, and any officer who, with notice of such decree, refuses to permit any person named therein to vote at any election covered thereby, or to have the

vote of any such person properly counted, may be proceeded against for contempt.

The legislation proposed by the Attorney General is subject to constitutional objection on two readily apparent grounds. Initially, it should be noted that the bill in question authorizes the voting referees to ascertain whether or not certain persons "are qualified to vote at any election," without prescribing any standards by which this decision is to be made. Determination of "qualified" electors is thus left to the unfettered discretion of the voting referees. It should require no particularized citation of judicial authority to demonstrate that the exercise of legal rights may not be exposed, by so vague and indefinite legislation as this, to curtailment or denial at the whim or caprice of individual public officers.

Secondly, and far more fundamentally, the proposed amendment—to the extent that it authorizes voting referees to determine who are qualified to vote in both State and Federal elections—clearly exceeds the powers vested in Congress by the Constitution of the United States and infringes the rights simultaneously secured to the States by that instrument. The right to prescribe the qualifications of electors and to determine, in light of such qualifications, which of its citizens is entitled to vote in State elections, is one resting exclusively within the province of the individual States. In this connection, the Supreme Court of the United States has declared that a State is free to conduct its elections and limit its electorate as it may deem wise, except as its action may be affected by the prohibitions of the Federal Constitution or in conflict with powers delegated to and exercised by the National Government, and that the power of Congress to legislate at all upon the subject of voting in State elections rests upon the 15th amendment and extends only to the prevention by appropriate legislation of the discrimination forbidden by that amendment. *Smith* v. *Allwright*, 321 U.S. 649; *United States* v. *Reese*, 92 U.S. 214.

It is apparent at a glance that the present bill is not limited to the prevention of racial discrimination in the enjoyment of the elective franchise condemned by the 15th amendment. The authority of the voting referees envisioned by the instant legislation is not circumscribed to determining the narrow question of whether or not a citizen's right to vote has been denied or abridged by a State on account of race, color, or previous condition of servitude. On the contrary, the bill in question authorizes voting referees to investigate the qualifications of electors, to determine—by some unknown standard—which citizens are qualified to vote and to certify to the court the names of all persons deemed by the referee to be so qualified. Manifestly, the proposed amendment infringes the right of the individual States to determine who may vote in State elections and exceeds the power vested in Congress to enforce the prohibition of the 15th amendment by appropriate legislation. Indeed, eminent judicial authority may be marshaled to support the view that an attempt to vest in Congress such broad power over the conduct of State elections, even by means of an amendment to the U.S. Constitution, would merit instant condemnation. On this precise point, no less a constitutional authority than Judge Story has observed:

"If a clause were introduced in the national Constitution to regulate the State election of members of the State legislature it would be deemed a most unwarrantable transfer of power, indicating a premeditated design to destroy the State government. It would be so flagrant a violation of principle as to require no comment. It would be said, and justly, that the State governments ought to possess the power of self-existence and self-organization, independent of the pleasure of the National Government."

Contemporaneously with his release of the proposed bill, the Attorney General of the United States issued a statement in which he declared:

"Our bill would not fragmentize the election process. It would leave the election procedures in the States where they have always been. At the same time it would operate within established judicial procedures to prevent discrimination in all elections, as the Constitution of the United States intends."

A mere reading of its provisions discloses beyond cavil that the proposed bill would have an effect diametrically opposite to that claimed for it by the Attorney General. If enacted and made operative, this bill would "fragmentize the election process" by establishing separate agencies to pass upon the qualification of electors and fractionate the electorate into two distinct classes; one class embracing those found qualified to vote by State officials applying State-established criteria governing qualifications for voting, and the other class comprising those found qualified to vote by court-appointed voting referees administering criteria—established by no one—and known only to the voting referee, if known at all. The invidious result of a scheme which establishes such a dichotomy in the electorate is not difficult to imagine. In his speech in the House of Representatives on January 26, 1890, the Honorable Henry St. George Tucker, a Representative from Virginia, commenting upon the then pending bill to amend and supplement the election laws of the United States, denounced its divisive effects in the following language:

"I object to another provision of the bill, Mr. Speaker. I do not believe in the supervision feature, as a matter of expediency, looking to the true interests of our State and Federal systems. I think the only logical position for Congress to take in regard to the elections of Representatives, if the time ever comes when under the Constitution it can take charge of the elections, is this: Either to give it absolutely into the hands of the States or absolutely into the hands of the Federal Government. Do not have any mixture of the two. It is, and will be, a source of serious trouble, dispute, and clashing of interests, as well as clashing of authority, if Congress assumes control of a part of the machinery and the States take charge of another portion of it."

Aside from its illegality and its necessarily divisive consequences, the historically demonstrable inutility of the present bill is alone sufficient to deprive it of any fundamental merit. A canvass of the legislative history upon the subject of Congressional elections discloses that, with the exception of some 24 of the 171 years since the National Government was founded, the policy has been to leave the regulation of such elections almost entirely to the States, whose representatives Congressmen are. For more than 50 years after the National Government was organized, no congressional action whatever was taken until, in 1842, a law was enacted requiring Representatives to be elected by districts, thus attempting to eliminate the practice which then prevailed in some States of electing on a single ticket all of the Members of Congress to which the State was entitled. Twenty-four years more elapsed before further action upon this subject was taken, when Congress provided for the time and method of electing United States Senators. In 1870, for the first time, a comprehensive system for dealing with congressional elections was enacted by laws which remained in force until their repeal in 1894.

These laws provided extensive regulations for the conduct of congressional elections. They made unlawful false registration, bribery, voting without legal right, making false returns of votes cast, interfering in any manner with officers of election, and the neglect by any such officer of any duty required of him by State or Federal law; they provided for appointment by circuit judges of the United States of persons to attend at places of registration and at elections, with authority to challenge any person proposing to register or vote unlawfully, to witness the counting of votes, and to identify by their signatures the registration of voters and election tally sheets; and they made it lawful for the marshals of the United States to appoint special deputies to preserve order at such elections, with authority to arrest for any breach of the peace committed in their view.

In *United States* v. *Gradwell*, 243 U.S. 476, the Supreme Court of the United States, commenting upon the history of the regulation of congressional elections and the experience gained thereby, pointed out:

"It will be seen from * * * these enactments that Congress by them committed to Federal officers a very full participation in the process of the election of Congressmen, from the registration of voters to the final certifying of the results, and that the control thus established over such elections was comprehensive and complete. It is a matter of general as of legal history that Congress, after 24 years of experience, returned to its former attitude toward such elections, and repealed all of these laws with the exception of a few sections not relevant here.

"The policy of thus intrusting the conduct of elections to State laws, administered by State officers, which has prevailed from the foundation of the government to our day, with the exception, as we have seen, of 24 years, was proposed by the makers of the Constitution, and was entered upon advisedly by the people who adopted it, as clearly appears from the reply of Madison to Monroe, in the debates in the Virginia Convention, saying that:

"'It was found impossible to fix the time, place, and manner of election of Representatives in the Constitution. It was found necessary to leave the regulation of these, in the first place, to the State governments as being best acquainted with the situation of the people, subject to the control of the general Government, in order to enable it to produce uniformity and prevent its own dissolution. * * * Were they exclusively under the control of the State governments, the general Government might easily be dissolved. But if they be regulated properly by the State legislatures the congressional control will probably never be exercised. The power appears to me satisfactory, and as unlikely to be abused as any part of the Constitution.'"

The striking similarity between the principal features of the pending bill and those of the election laws of the United States in force between the years 1870 and 1894 indisputably stamp the proposed legislation as the modern day progeny of the same thinking which fostered the ill-advised attempt on the part of Congress to "purify" Congressional elections by entrusting their regulation to officials appointed by Federal courts. In light of the deplorable results engendered by former Congressional legislation in this field, it is unimaginable that any present day legislative proposal could possibly trace its lineage to a more inauspicious origin. In 1893, reporting on the reprehensible conditions prevailing under the Federal election laws which had then been in force for almost a quarter of a century, the Select Committee of the House of Representatives to Inquire into the Supervision and Administration of Election Laws by Officers of the United States in the City, County and State of New York advised the House of Representatives (H. Rept. 2365, 52d Cong., 2d sess.):

"It is assumed by the committee that the administration and results of such laws would nowhere appear more clearly or in a better light than in the city of New York.

"It is believed that in the largest city in the country, where every class of our voting population is fully represented and where the respective parties have for years made their principal headquarters at important elections, and under the constant publicity given by the best organized and most effective newspaper press of the world, the actual workings of these laws and their good or evil results can be more clearly seen and appreciated and more intelligently judged than is possible anywhere else.

"Your committee, after a very careful study of the operations of the Federal election laws before election and on election day in the city of New York, are of the opinion that all of these laws have entirely failed to produce any good results in the direction of the purity of elections or the protection of the ballot box, and have been productive of such serious and dangerous results that they ought at once to be repealed.

"The reasons for our recommendation for the repeal of these laws, based on our study of their operation and results in New York, may be classed under four heads. They ought to be repealed—

"First. Because they result in no conviction of offenders, and are therefore useless to prevent or punish crime.

"Second. Because they cause great expense and are fruitful of constant and continuing frauds upon the Treasury.

"Third. Because they are designed to be used and are used only as part of the machinery of a party to compensate voters who are friendly to it, and to frighten from the polls the voters of the opposing party.

"Fourth. Because under and by virtue of these laws the gravest interference with the personal rights and liberty of citizens occur, and voters are punished by arrest and imprisonment for their political opinions."

This report of the select committee served to bear out with a vengeance the unequivocal prediction made on June 26, 1890, by the Honorable Henry St. George Tucker in his speech in opposition to the then pending bill to amend the Federal election laws:

"In conclusion, let me say, gentlemen, that while this bill in my opinion is unconstitutional, and Congress has no power to pass it, that the provisions of it are hideous, and that they ought not to be entertained by this House or this Congress; that even if it passes it will never accomplish the purpose 'whereunto it is sent.' You may rely upon that. As was said in the discussion here today, if there be fraud and corruption in the country the only way to correct them is by an enlightened public sentiment which will frown them down, so that a man who deals in fraud, bribery, or corruption will not be countenanced in the community."

This forceful statement by the Representative from Virginia upon the proper as well as the improper method of controlling abuses in the conduct of elections was echoed by President Coolidge in language which reflects a philosophy of government fundamentally at variance with that of the sponsor of the pending bill:

"It is too much to assume that because an abuse exists it is the business of the National Government to provide a remedy. The presumption should be that it is the business of local and State governments. Such national action results in encroaching upon the salutary independence of the States and by undertaking to supersede their natural authority fills the land with bureaus and departments which are undertaking to do what it is impossible for them to accomplish, and brings our whole system of government into disrespect and disfavor.

"The Nation is inclined to disregard altogether too much both the functions and the duties of the State. They are much more than subdivisions of the Federal Government. They are also endowed with sovereignty in their own right."

In addition to the objections which may be lodged against the bill in question upon the grounds of illegality and inutility, a canvass of existing law clearly reveals that the proposed amendment is altogether unnecessary. Title 42 U.S.C.A., 1971(a), derived from the Civil Rights Act of 1870, declares that all citizens otherwise qualified to vote in any election shall be allowed to vote in such elections without regard to race, color, or previous condition of servitude. The Civil Rights Act of 1957 amended this section of the United States Code by adding provisions which declare that no person shall intimidate, threaten, or coerce another for the purpose of interfering with his right to vote in any election in which a Federal officer is to be selected; authorizes the Attorney General of the United States to institute proper proceedings for preventive relief whenever any person has deprived or is about to deprive another of rights secured by section 1971; vests jurisdiction of such proceedings in Federal district courts without requiring an aggrieved party to exhaust State administrative or judicial remedies, and establishes contempt proceedings which provide for the rights of individuals cited for contempt of an order issued in an action instituted under the statute in question.

The existence of these laws lends abundant support to the dissent registered by the Honorable John S. Battle, a former Governor of Virginia, and a former member of the United States Commission on Civil Rights, to the Commission's proposal for the Presidential appointment of temporary registrars. This dissent is couched in language which is equally applicable to the pending proposal of the Attorney General:

"I concur in the proposition that all properly qualified American citizens should have the right to vote but I believe the present laws are sufficient to protect that right and I disagree with the proposal for the appointment of a Federal registrar which would place in the hands of the Federal Government a vital part of the election process so jealously guarded and carefully reserved to the States by the Founding Fathers."

Illegal, useless, and unnecessary, the pending proposal, if enacted, cannot but be productive of incalculable mischief. History has demonstrated in conclusive fashion the detrimental effects upon Federal-State relationships which legislation of this character must produce, without any countervailing benefits to the electoral process. Fewer public interests have a higher claim upon the informed discretion of Congress than the avoidance of needless friction between the Federal and State governments, and a scrupulous regard for the rightful independence of State governments and the smooth working of our federated system should at all times actuate the National Legislature.

An obvious characteristic of the bill in question is its palpable direction at the Southern States, and an even more insidious, but no less inevitable, consequence of its passage will be its reprehensible appeal to long dormant regional animosities. Enactment of the bill proposed by the Attorney General will herald the return of those flagrant abuses of the electoral process which obtained during the period in which congressional elections were conducted under Federal supervision, extend the reach of such abuses to State elections, subvert the independence of State governments by encroaching upon rights reserved to them by the Constitution, disrupt harmonious relationships between the Federal and State governments, resurrect the specter of sectional hatred, and impede rather than facilitate a constructive solution to the problem sought to be redressed.

I know of no statement more suited to the pending proposal than that uttered by Senator William E. Borah, of Idaho, speaking in the Senate on January 7, 1938, in opposition to a measure similar in nature. With reference to the Southern States, the Senator from Idaho declared:

"These States are not to be pilloried and condemned without a full presentation of the nature of the task which fate and circumstances imposed upon them, and not without a complete record as to the weight and difficulty of the task, what has been done, and with what good faith it has been met. I shall contend that the southern people have met the race problem and dealt with it with greater patience, greater tolerance, greater intelligence, and greater success than any people in recorded history, dealing with a problem of similar nature."

The situation which the proposed amendment seeks to remedy was in the process of progressive and constructive solution in a spirit of mutual good will and in promotion of amity and concord between the two races. The course which this legislation will shape and direct will destroy much of the salutary gain already made and accentuate and stimulate the gravity and difficulty of a solution in the days ahead.

For the reasons stated, I oppose passage of the legislation recommended by the Attorney General and renew the eloquent appeal made under similar circumstances by the Honorable Henry St. George Tucker to the House of Representatives in 1890:

"I only ask that this House will do no act that will disturb the harmony * * * of the State and the Federal Governments, that beautiful system which, when kept in its perfect symmetry, is the admiration of the world, but when jostled or gotten out of gear will work destruction to the people for whose welfare it was intended."

Respectfully,

A. S. HARRISON, Jr.,
Attorney General of Virginia.

Foreign Aid and Flood Control

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. LEVERING. Mr. Speaker, on a number of occasions, I have raised objection to what seems to be more and more an established policy on the part of the administration to the effect that we have enough of everything for foreign peoples but not enough for our own. We have been generous with surplus foods for those abroad, and I think this is the way to obtain good will in a foreign aid program, but our Secretary of Agriculture has refused to put into effect the food stamp plan which the Congress enacted last year to make available surplus commodities to the needy in this country where we have 6 million families with unbalanced diets.

Just a few days ago the President vetoed the pollution control bill which provides Federal assistance to local municipalities in cleaning up water contamination in the interest of the Na-

tion's health wherein the Federal contribution is about one-fourth of the cost, and yet the Congress is being asked to vote for funds to supply the same kind of program to more than 50 foreign countries wherein Uncle Sam picks up the entire tab. As a matter of fact, Mr. Speaker, the total in American dollars spent abroad for health and sanitation projects for the fiscal years 1955 through 1959 was $48,539,797.

Further, Mr. Speaker, despite the fact that my congressional district, the 17th of Ohio, last year suffered one of the most devastating floods in its history, where money damages ran into several million dollars not to mention the untold human suffering involved, and despite the fact that our President declared a certain part of the flooded area a disaster area, despite the fact that the Army Engineers and the Public Works Committee of the House recommended that flood studies should be made on four different river systems, the Bureau of the Budget has to date not seen fit to include the sum of $32,000 in order that the studies can be made in fiscal 1960. But yet, the Congress is being asked for another recordbreaking foreign aid appropriation amounting to more than $4 billion which includes moneys for flood-control projects of all types in many nations abroad.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a fine editorial from the February 22 edition of the Mount Vernon News, published in Mt. Vernon, Ohio, which I believe is representative of the resentment of our people against the policies I have referred to today:

FOREIGN AID AND FLOOD CONTROL

President Eisenhower spoke out last week with some asperity against those who, as he phrased it, want to make a whipping boy out of foreign aid. Specifically, he was defending his request to Congress for $4,175 million in foreign aid.

The President took the stand that no program is more essential to the Nation's security than mutual assistance to America's allies and to underdeveloped countries.

The President may be right, but the American taxpayer is of the opinion that a great deal of the money which has been spent in foreign aid has gone down a rat hole. For years we have had a steady flow of money wasted on projects which are useless in the nations which they are expected to help. We who pay the taxes are convinced that our foreign aid program can use a thorough overhauling and a hardheaded reexamination. Most Americans probably also feel that the total amount we are doling out to other nations can be sharply reduced without eliminating any really essential works—if the program is planned and administered efficiently.

In defending his aid program request, the President went on to say that everybody who wants a dam built somewhere is making a whipping boy out of foreign aid.

That strikes close to home. Residents of the Kokosing River watershed want a couple of dams built. Not huge and costly affairs, but relatively small and inexpensive headwater dams which will help protect our low lying areas against a repetition of the destructive and costly flood of January 21, 1959.

We as taxpayers believe we are entitled to consideration from our Federal Government in this matter and we believe it is more important than, for example, an agricultural school in Bolivia which is far more elaborate and expensive than the people of the community can possibly utilize; to mention just one recent instance of wasteful use of foreign aid money.

We are not opposed to foreign aid, as such, but we believe that home projects can be just as important.

Positive Action on Arab Boycott

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. PELLY. Mr. Speaker, my bill, H.R. 10580, was one of several similar bills intended to stop our Government from canceling agreements with vessel owners in the event one of their vessels was prevented from loading or discharging cargo in any port by the local authorities because of that vessel having previously traded with Israel. Up until recently the United States in effect has been aiding and abetting in the blacklisting of American ships. Officially this involved the so-called Haifa clause inserted by our Military Sea Transportation Service in its tanker charters. The clause was an outgrowth of an incident in 1957, when port officials in Saudi Arabia refused to load a tanker called the *National Peace* when it was discovered that the same vessel had previously, under its former name of SS *Memory*, traded with Israel. As is widely known, the member nations of the United Arab Republic boycott the loading or unloading of any vessel putting into their ports having operated in trade with Israel.

Those of us who introduced legislation such as my bill wanted to make it clear that the United States does not directly or indirectly, overtly or tacitly, endorse or enforce the Arab boycott of ship operators who trade with Israel.

Mr. Speaker, in the light of Members of Congress having introduced proposed bills and in response to our protests and widespread public indignation the U.S. Navy has rescinded its policy of holding the operators of chartered ships which have traded with Israel responsible for any delay occasioned by an Arab boycott. However, even though the offensive clause in Navy agreements has been removed I would hope the matter is not ended there. As I see it, Congress should indicate in a positive way that we oppose the united Arab blockade restrictions against Israel in the Suez Canal as a national moral obligation since the Israeli withdrawal from the Gaza Strip 3 years ago.

Affirmative action on legislation such as H.R. 10580 would demonstrate to the world that the Congress abhors rather than abets the Arab boycott. The sudden recanting of a Department rule is hardly the way a great nation should seek peaceful conformity with international law on nonmilitary cargo. Let us not by our inaction and silence become a partner in the Suez Canal ship transit discrimination. Each day that passes of such official neutralism detracts from our National stature and leadership among the nations of the world.

I hope a hearing on H.R. 10580 can be scheduled promptly.

Bayonne's National Merit Scholarship Finalists

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. GALLAGHER. Mr. Speaker, a distinct honor has been accorded to my district. Two boys from Bayonne, Robert A. Margulies and Marc J. Roberts, have become the first students from Bayonne High School ever to reach the finals of the national merit scholarship program.

These boys certainly have brought honor to their family, school, and city and are to be commended for their outstanding efforts.

It is a privilege for me to take note of this and I would like to include as part of my remarks the excellent editorial from the Bayonne Times of February 17, 1960, along with an article from the Times of February 16:

[From the Bayonne Times, Feb. 17, 1960]

BAYONNE'S MERIT FINALISTS

It's good that Bayonne people should be critical of educational standards in local schools, and fight at hearings against reduction of school budgets here, because improvement comes from discontent. At the same time, it is good to see that the products of Bayonne schools are doing well in extremely difficult competition. It has just been announced, for example, that Robert Margulies and Marc Roberts of the present senior class at the high school have been named finalists in the national merit scholarship program. This is a very respectable showing, and regardless of the obvious talent of both boys it speaks well for the school where they have received their training.

The same conclusion follows from the experience of other graduates of Bayonne High School. Many of them go on to colleges that have the pick of the country, and they find themselves working in the same classrooms with the best prepared students in the United States. They do well, as they demonstrate by the Phi Beta Kappa keys they win, by the graduate schools they enter, and by the records they make after they win their degrees.

So let's go on believing that Bayonne schools need improvement and need the best support the city can provide; let's continue to criticize any inadequacies we might discover or suspect in our schools, and let's go right on thinking of ways to make our schools better. But in the meantime let's remember Marc and Robert and so many others before them who have combined their own intelligence and industry with what their teachers have brought them in Bayonne schools to make records of which they and the city can be proud. Discontent is excellent and should continue, bringing improvements as it goes. But it is not amiss to pause occasionally for a round of ringing applause.

[From the Bayonne Times, Feb. 16, 1960]

ROBERTS AND MARGULIES IN MERIT SCHOLAR FINALS

Robert A. Margulies and Marc J. Roberts have become the first students from Bayonne High School ever to reach the finals of the national merit scholarship program, Alex O'Connor, principal of the school, said today. Margulies is the son of Mr. and Mrs. Max Margulies, 655 Avenue C, and Roberts is the son of Mr. and Mrs. W. Roberts, 41 West 33d Street.

IN TOP .006 PERCENT

The boys, both seniors, were named as a result of their scores on two tests used in the national merit competition. About six-tenths of 1 percent of the seniors in each State and a total of 10,000 students received the certificates of merit for reaching the finals.

The merit scholars will be selected from these 10,000 and will be announced about April 27. Over 110 organizations join to provide the merit scholars with several million dollars in scholarship aid.

Margulies is cocaptain of the track team, a representative for Boys' State, a member of the National Honor Society, the student congress, and the student ring committee. He is a sports reporter for the school paper, the Beacon, and writes a column for the Bayonne Times.

Roberts is Governor of Boys' State this year, a member of the National Honor Society, treasurer of the New Jersey Federation of Youth Temples, president of the Youth League of the Jewish Community Center, the senior class, and the debating club. He is a member of the student congress and edits the Beacon. Roberts 2 years ago won the American Legion oratorical contest. O'Connor described him as one of the finest boys the high school has every had.

Merit scholars finally chosen will receive 4-year awards carrying stipends that range from $100 to $1,500 a year. The selection of the winners will be made by the merit scholar selection committee, a panel of experts in academic selection, and by special judging teams convened by various donors of merit scholarships. Grades, leadership, citizenship, and extracurricular activities are considered, as well as test scores.

The Importance of Antisubmarine Warfare

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. EDMONDSON. Mr. Speaker, Space/Aeronautics magazine for January 1960 contained an interesting and most informative special report on "Undersea Weapons Systems" which is most important to an understanding of our national defense.

The subject of antisubmarine warfare, particularly in the light of Russia's tremendous emphasis on submarines, is one which holds keen interest for all persons interested in our national security.

In view of this fact, I should like to insert in the RECORD at this point two of the four parts of this revealing special report on "Undersea Weapon Systems":

UNDERSEA WEAPON SYSTEMS 2—NEW SYSTEMS CONCEPTS DEVELOPING FOR UNDERSEA WEAPONS

(By Victor de Biasi, associate editor and project leader)

Not too long ago, only a few people dared to predict that missiles would ever have the tremendous effect on our defense structure and the aerospace industry that they actually have had. Yet those few visionaries were right. Today, the military and the industry are confronted by a comparable daring new "vision"—undersea warfare.

The full technical potential of undersea warfare is still hard to pin down. But there is little argument about the grave military threat of an attack launched from under the ocean. It is this threat actually that has prompted most of what limited scientific work has been done on undersea-warfare problems.

It is understandable that our efforts right now should be concentrated on better defenses against submarines. But why stop at this point? There is no technical reason we could not develop whole families of underwater attack vehicles and weapons just as we have in the air. And there's a lesson we can drawn from the history of aviation: If we had concentrated on the development of antiaircraft warfare and neglected the aircraft themselves, even the supersonic plane would probably still have to be developed.

It is entirely conceivable that some day missiles and space stations may become so effective that they virtually will put aircraft and surface ships out of business. If that happens, the submarine may be the only other vehicle that can carry out military missions with any success (assuming, of course, that submarine developments stay one step ahead of detection and interception techniques).

So long as a non-air-breathing sub moves quietly, it can remain invisible. Any experienced Navy man will tell you that it is practically impossible to pinpoint an uncooperative, deep submarine—even when you know its general area location.

Their cloak of invisibility gives high performance underwater vehicles an awesome potential. Imagine what a mach 2 bomber or fighter could do if there were no such thing as radar to detect it!

Suppose then that, instead of the submarine as we know it, we had small recon, medium-size interceptor, and giant bomber subs. Suppose we armed them with external missiles or gave them drone escorts. Eventually, they might even be backed up by unmanned satellite stations or ocean-bottom armories to carry out preprogramed missions upon command.

Blue-sky thinking does not solve today's problem, though. The Navy is boxed in by almost overwhelming responsibilities. It has a huge surface fleet to maintain, an air arm, and now an underwater arm of steadily increasing size. What it doesn't have is enough money.

Actually, the Navy has more of a management problem on its hands than a technical problem. It simply cannot keep doing business as usual and meet all its obligations.

Several courses of action are possible. One would be to cut the undersea-warfare branch adrift and let Congress fund it on an equal footing with the traditional services. This approach might work, but it would not make many people happy. You also lose the inhouse effectiveness of integrating the submarine with surface and airborne forces.

Another solution would be to limp along and patch up the present system on the basis of continuously shifting priorities. This stifles technical growth but will work as long as the enemy does the same.

CHANGE ALL THE VARIABLES AT ONCE?

A more drastic approach would be to consider the effects of changing all the variables at once. Analyze the entire Navy's operation as though it were to be set up from scratch and study the implications of possible organizational and operational changes in the light of the latest technological developments. This tack, of course, offers the least chance of success, because the opposition will be fierce. But it might be worth a paper study.

Assume the Navy finds it could carry out its major missions with three basic types of vehicles, all of which actually are already under development; hovercraft, hydrofoils vehicles, and subs. Assume further that each of these three types could be built at minimum cost in three size ranges to perform different missions.

Perhaps we could develop standard integrated control systems, powerplants, weapons, accessories, and support equipment. In short, consider changes not only in vehicles but also in equipment and operation.

Our study might show that we cannot maintain our present equipment and also make the most of new discoveries and developments. In that event, it might pay to deemphasize current production, depend on our allies to hold the line, and go on to the next generation—much the same as the Russians are believed to have proceeded in the case of their missile program.

Many will feel it presumptuous of anyone outside the Navy to make suggestions of this kind. But it should be rather obvious that nothing is more important for us today than finding some way of exploiting whatever technical leads we have at a cost we can afford.

The decision must be made now. By 1965, most of our present ships will be ready for retirement. And 5 years certainly isn't too much leadtime for research, development, and production of new systems.

The aerospace industry's weapon-systems approach may be just what we need if we want to come up with mission-bred, integrated undersea vehicle designs. Right now it takes as many as 116 men to operate subs that carry less of a weapon payload than the B–36. With integrated subsystems and automatic control, it might be possible to cut the crew to 10 or 12 men. One hundred men less make a tremendous difference in payload, size, supplies, cost, and expendability.

Why not design ships so that the entire powerplant can be replaced as a section, much as an engine in a plane? If a sub gets into trouble, why not have the crew "bail out" in a control capsule?

Experienced shipbuilders and Navy oldtimers smile tolerantly at suggestions of this kind. These proposals obviously run counter to the Navy doctrine of self-sufficiency afloat, which says you should be able to repair anything from a fire control system to a leaky head. But there is no reason why this doctrine cannot and should not change.

One thing the Navy's departments will not stand for is having individuals or companies barge in and tell them how to run their shop. If companies in the aerospace industry are to make any contributions in the development of undersea vehicles and weapons, they would be ill-advised to become impatient with the way the shipbuilders and the Navy operate. They must learn to understand the problems of the Navy and to work with the Navy in finding solutions for them.

The Navy is used to working with companies that have had its interests at heart for many years, companies that know the Navy's problems intimately and have an outstanding record of accomplishments. It will take a little time before any "newcom-

ers" are fully accepted—especially since in some Navy quarters they are slightly (and rather unreasonably) resented for "trying to cash in on a good thing."

What are the fundamentals of undersea defense? Surveillance, detection, identification, tracking, intercept, and kill—the same as in air defense. Attack can mean anything from launching long-range ballistic missiles to send up short-range homing missiles.

A number of truly advanced defense systems appears to be feasible. Reportedly, we are already working on lining our continental shelf with transducers to detect oncoming enemy subs at long range. Another idea would be to carry sonar detection sites to the enemy. Skimmer-type hovercraft and hydrofoil vehicles moving at 100-knot speeds could cover a giant grid quite effectively. At the grid site, such a craft would settle in the water and lower a string of transducers to sample several depths. (Over very rough waters, a skimmer could use its air cushion at the expense of hovering endurance.) In this way, you could get a three-dimensional fix on suspected targets. After positive target identification, missile-carrying skimmers and hydrofoil craft would come in for the kill.

SUBS ATTACK WITHOUT LOCAL HELP

Submarine attack in enemy water or under enemy-controlled skies will have to be carried out without local surface help. It seems reasonable to expect that different types of subs will be developed to carry out different missions. Several types could then be teamed to make up a fighting force.

Polaris-type submarines are in a class of their own—they are designed to operate as lone wolves. But you could visualize several small, defensively armed recon subs operating in teams of two well forward of a large missile attack submarine to spot likely victims.

Once a target is positively identified, the recon team would have to reveal its presence by communicating with the missile sub. This might be done by transmitting on a transducer lowered to a preselected deep sound channel or by raising an antenna. In either case, chances are the communication will alert the enemy. But by then he would no longer have time to escape.

Bearing data on the target and a common reference would enable the missile sub to calculate the target's coordinates. The reference might be a sound transmitter released by one of the recon subs in the direction of the missile sub. The transmitter could send out timed pulses, one horizontally and the other bounced off the ocean floor. Meanwhile the recon subs would be sending bearing data on the reference and the target. Knowing the time interval between transmitted pulses and the time delay in their reception, the missile sub could determine the range of the reference and go on to lay out the target coordinates.

In a matter of seconds, a missile could be launched into the atmosphere to land in the general vicinity of the target. During the missile's water entry trajectory, the recon subs would focus active sonar on the target, so that the missile could home in on the reflected energy.

The advantages of such a system are that the recon subs could be small and elusive. They could be built in great numbers and fairly cheaply and they could be as expendable as aircraft. They might even be ferried by hydrofoil vehicles or missile-armed convoys.

The trend in submarine performance is to go deeper and faster. Missiles launched from deeper and faster subs will have to withstand terrific pressures (or else the sub will have to change levels for launching). The same will hold true for any missile designed to seek out these subs. Below certain depths it will probably pay to carry external armament rather than to attempt leakproof openings in the hull. In such an arrangement, the missiles probably will have to be filled with oil to keep them from being crushed under compressive loading.

UNDERSEA WEAPON SYSTEMS 3—CATCHING UP WITH THE SUBMARINE

(By Paul Cohen, Antisubmarine Warfare Section, Sperry Gyroscope Co.)

Nuclear power has given today's submarine endurance and mobility orders of magnitude beyond that of its snorkeling, diesel-powered predecessors. The solid propellant ballistic missile with a nuclear warhead has given it a destructiveness without precedent in naval warfare. In fact, a single Polaris sub can carry more explosive energy than has been used in all the wars of the world.

It's not hard to see that today the submarine threat is frighteningly greater than at any time in the past. And things are not getting better—the rate of technical progress in antisubmarine warfare (ASW) is slow compared to that of the submarine itself.

We cannot blame lack of funds or of talent for the slow development of ASW. The physical effects on which ASW equipment depends have been examined again and again in the light of every little advance made in instrumentation. New information on processing theories and sophistications in circuitry are quickly brought to the attention of ASW engineers. No, the major obstacle to ASW progress is that the physical world itself seems to conspire to protect the submarine.

We desperately need a breakthrough to solve the basic problem of ASW: finding a submerged submarine. Not that this is impossible. A sub creates a multitude of secondary effects as it moves through the water (see "State of the Art: Undersea Detection," p. 57). Someday, measurement techniques may become sensitive enough to seize on these effects, even at a considerable distance, as dependable clues to the presence of a submarine. When that happens, it may easily put the submarine back on the defensive. But it hasn't happened yet. For the present, therefore, the outlook for ASW is gloomy.

The primary defense of the submarine is its invisibility. It can hide under the surface of the oceans, which are very large, very deep, and virtually opaque to all electromagnetic radiation. The immensity of the oceans, which cover 70 percent of the earth's surface, is the first deterrent to effective ASW. Right now we have no scanning technique giving enough range so that a practical number of scanning vehicles (surface ships, aircraft, submarines) could guard a moderately large oceanic area like the Bay of Biscay, let alone a major ocean.

In World War II, airborne radar could rapidly scan large ocean areas for subs lying on the surface to recharge their batteries. Today, the battery sub can use snorkels to reduce their radar-reflecting surface to a few square feet. In a few years, even these slight above-water projections will be rarely used—nuclear subs, whose powerplants need no oxygen, can stay submerged indefinitely.

OCEAN IS CONTINUALLY IN MOTION

Another natural deterrent to detection is that the oceans are rarely calm. Each of the many forms of bad weather—fog, storm, snow, rain, and so on—in its own way hampers ASW. (Even good weather isn't necessarily good for ASW—brilliant sunshine interferes with infrared detection.)

Weather is a problem even before you get to the actual ASW equipment. If we ignore hydrofoil craft, which have yet to prove their sea-keeping capabilities, a ship must have at least 1,000 tons displacement to keep at sea under a wide range of weather conditions. Winter seas in the North Atlantic, to take an example, average about state 5—about half the time, the waves are 10 feet high or higher. Even if a ship can take this kind of weather, its efficiency as an ASW unit falls off a good deal as the crew tire under successive days of continuous ship motion.

Nor are aircraft much better off. By and large, only the larger ones have all-weather capability. Helicopters, the ideal ASW aircraft, are quite dependent on weather and light conditions.

In contrast, a sub couldn't care less about weather. Submerged below the regions appreciably affected by wave action, it can always achieve its rated performance. This is why, in heavy seas, an 18-knot submarine can outrun a 35-knot destroyer.

Not surprisingly, submarine designers and crews are not disposed to give up the advantages of invisibility. Rather they have what amounts to a phobia about radiating signals into the environment. As much as possible, a sub operates only on passive information in detecting and tracking both surface and submerged targets.

Surface ships, on the other hand, can't hide as easily. If their target is submerged and quiet, only active sonar will reveal it at long range.

LARGEST SONARS COMPARE WITH RADARS

Today's largest sonar transducers and circuits (which include continuous wave, frequency modulation, and Doppler types) can handle about as much average power as can radars. Wavelengths are comparable, but sonar pulses for many reasons are much longer than radar pulses. Some sonars are so large that it almost takes a cruiser to mount them.

High frequency sonars far above the audible range give reasonably good resolution but they have only a short range and are quite sensitive to turbidity. Low frequency sonars have longer ranges but are massive and need such large domes or hydrodynamic shielding structures, that they interfere with the speed and endurance of the carrying ship.

Acoustic transmission runs into lots of problems posed by the ocean environment. Sea water is layered in terms of temperature (which can change sharply within a few feet of depth) and, less commonly, in terms of salinity. The surface and the bottom of the oceans both are irregular and sometimes changeable. The waves of the ocean therefore follow complex paths marked by heavy refraction and reflection that can blank out or distort signal transmission and reception.

The oceans also are full of acoustic noises, both physical and animal in origin, and of nonhomogeneities that sometimes are acute enough to reflect like a target. And on top of all these natural detection problems come those of manmade decoys.

Magnetic detection is effective, but mainly only over short ranges. Most of the ocean is deep enough so that wrecks, which might look like targets, are not a problem. Nor, with rare exceptions, are magnetic anomalies sharp enough to be troublesome.

Countermeasures, such as degaussing, can limit magnetic detection. And, of course, if submarines were to start using plastic, aluminum, or other nonmagnetic hulls, they would be very hard to find magnetically.

SUBS CAN BE ATTACKED IN MANY WAYS

Weapons constitute the only ASW area that is in relatively good shape. As in making a rabbit stew, the problem disappears once you have the rabbit. If you've pinpointed the submarine, you can attack it with a variety of weapons: conventional and nuclear depth charges, torpedoes, and rocket missiles with ranges from a few hundred to many thousands of yards.

Basically, weapons are on hand or can quickly be developed to meet the range capa-

bilities of any reasonably precise detection system we can foresee. Still, we must not forget that submarines, which in World War II could dive to no more than 600 feet, can now be built to reach depths measured in thousands of feet.

This greater vertical mobility adds to the problems already posed by the density of water, which is over 800 times greater than that of air at set level. It is difficult and wastes energy to make undersea weapons move fast. Nuclear subs can already attain underwater speeds that are uncomfortably high compared with those of present ASW torpedoes.

SINKING A 30-KNOT SUB POSES PROBLEM

It is one thing to overtake and destroy a submerged submarine at 6 knots. It is quite another problem to defeat a 30-knot sub that usually knows where the searching ship is long before its own presence has been detected.

ASW undoubtedly has made progress, but the sub is making even faster progress. Helicopters and dipped sonars have increased the effectiveness of surface search (yet not enough to make a basic difference). Sonar ranges have been extended quite drastically over the past decade—in some cases by hundreds of percent. But the faster, tougher sub of the future, which will stick nothing more than a periscope or an antenna into the air, remains a threat that today's ASW techniques show few signs of challenging.

The Challenge of Our Schools

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I would like to enter into the RECORD an editorial that recently appeared in one of the newspapers in my district. I call the attention of Members particularly to the last paragraph regarding the issue of Federal aid. I feel that the entire editorial manifests a realistic attitude toward the educational challenge. It is an attitude which I think we here would do well to emulate.

The editorial follows:

[From the Wallowa County (Oreg.) Chieftain, Feb. 18, 1960]

THE CHALLENGE OF OUR SCHOOLS

The challenge to provide better schools for the Nation's youth is seldom met head-on with bold and practical proposals. Usually it merely stirs up high sounding platitudes and provincial sentiment which is opposed to any substantial change in the small schools which many adults profess to love so much.

But the point may soon be reached when the practical limits of the property tax to raise the necessary funds for a minimum school budget may be reached, and then what? School boards may be forced into further consolidations and into demanding more State and Federal aid. Resistance to change will soon be broken down by the inability to continue the present setup.

But further State and Federal aid may be conditioned upon local districts meeting higher standards which some of our small schools cannot attain either because of a lack of dollars or a lack of students.

With these prospects in the offing the need for some serious thinking to assist the county school reorganization committee in coming up with a plan for a better school organization in Wallowa County is imperative. If there is no serious thinking and no real planning for the time when the present setup can no longer be maintained, a lot of money will have been thrown away in school plants which will have to be abandoned, and we will find ourselves forced into sudden action without well thought out plans.

We might as well forget about opposition to Federal aid for schools. The dangers are more apparent than real, and the need for Federal aid is too acute to leave us any choice. And we might as well get down to a serious study of the best way to effect a more economical and a more efficient school system than the one we now have in Wallowa County, because it is a job we will have to do before long, and the sooner we get at it the better the job will get done. Some of us loved horses and buggies, but they are largely gone now. Some of us may love the independent, small elementary and high schools, but they will soon be gone too.

Prominent Detroit Editor Cited by Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. RABAUT. Mr. Speaker, last Saturday, in Detroit, Mr. John C. Manning, editor of the Detroit Times, the very well-known daily newspaper, was honored by the Michigan Veterans of Foreign Wars. The plaque with which he was so deservedly presented cited his journalistic achievements and his efforts in behalf of veterans' organizations. This recognition, Mr. Speaker, is certainly a prime example of credit where due. John Manning has for many years dedicated himself to the highest ideals of the journalistic profession and has been singularly successful in the achievement of these ideals. He has been for all this time a civic leader and in his capacity as the editor of the Detroit Times has always kept his watchful eye of the affairs of the city of his birth, as well as the affairs of the Nation and the world. John Manning has long been a leader in the advancement of the interests of the many veterans' organizations in the State of Michigan and in the overall interest of all American veterans.

I should like at this time to say to Jack Manning in front of this body, "Well done and congratulations." I would like also to insert in the RECORD excerpts from the reportorial account of the actual presentation which includes the warm praise he so well deserves as enunciated by Mr. Joseph Mann, past commander of the Michigan Veterans of Foreign Wars who made the presentation:

MANNING HONORED BY VFW

Michigan Veterans of Foreign Wars Saturday honored John C. Manning, editor of the Detroit Times, for his journalistic achievements and his efforts in behalf of veterans' organization.

Joseph Mann, past commander and director of the welfare and service department, presented a bronze plaque to Manning at the VFW's Ninth Annual Service Officers' Conference.

Some 400 officers, at the conference in the Veteran's Memorial, heard Mann say in presenting the award:

"In grateful appreciation of outstanding journalistic achievements benefiting the people of the city of Detroit and the State of Michigan.

"Your editorial policies have been concise and truthful and have been presented in conformity with the best traditions of American journalism."

Mann added: "It seems through the years the Hearst newspapers, more than other newspapers, have been most thoughtful, helpful and considerate to the cause of the veteran.

"Whenever I needed any advice or counsel," Mann said, "I found it readily available from Mr. Manning."

Mann said the first award of this kind was presented by the VFW to William R. Hearst, Jr., last year.

Manning, a native Detroiter, is a World War I veteran.

A major portion of the 2-day conference, which ends Sunday, dealt with a new pension plan, effective next July.

The Foreign Student Exchange Program

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the United States sponsors exchange programs among students to help bring understanding to Americans and to those who visit this Nation. Usually, I think, we do manage to accomplish just that.

An article in the February 1960 issue of Reader's Digest, however, tells about a person who thought that more should be done. Not only that, he set about to do something himself. His program, which originated at Rutgers—the State university—is one of interest to all Americans.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARRY MORGAN'S FRIENDSHIP AMBASSADORS

(By Clarence W. Hall)

One day last spring Harry Morgan, student body president at Rutgers University, New Brunswick, N.J., listened aghast as an exchange student from Pakistan ticked off his impressions of the United States. Nural Khan's opinions embraced many of the stock criticisms of this country that are voiced abroad—stereotypes gained from newspaper headlines, from American movies and tourists.

These false images—many of them Communist-inspired—picture the United States as the land of disrupted family life, low moral standards, quick discrimination against all people of color. According to surveys made by the U.S. State Department, Americans are believed to be smugly complacent, shallowly religious, politically naive, lovers of gadgets and luxury, frenzied pursu-

ers of the fast buck. They are said to know little of foreign peoples—and to care less.

Harry Morgan was shocked to discover that Nural Khan held these opinions—since the young Pakistani had been living in the United States for 2 years. Nural Khan was slated to return home soon, and would be taking with him these twisted images of his host country.

"Tell me, Nural," Harry Morgan asked, "how much of the United States have you seen beyond this campus? How many Americans have you met?"

Khan admitted that he'd been no farther than New York City. His off-campus contact with Americans had been limited to an occasional visit to a fellow student's home for a holiday dinner.

Harry Morgan did some research into our gigantic student exchange program. He discovered that there were then in the United States 47,245 foreign students from 131 countries. A large majority were here on scholarships provided by the U.S. Government or private philanthropy, representing an investment of more than $200 million. And only a tiny minority ever had a chance to see the country and meet Americans in their own homes and communities, sample their friendliness, grasp their way of life.

Convinced that Americans were getting small return on their whopping investment in good will, Harry Morgan resolved to do something about it. A personable young man of 25, with an easy charm and quick smile, he was not without experience in helping visitors from abroad learn about the United States. For 3 previous years—the first time when he was on leave from the Air Force—he'd brought to the States small groups of average but critical Europeans. Supported by friends who bought "shares" (at $1 each) in his one-man ambassadors-for-friendship program, he'd given the visitors grassroots tours, sent them home singing praises of the United States.[1] In his ambassadors' treasury he had $1,000, and he determined, with the approval of his "shareholders," to use this for a nationwide tour with four foreign students.

Nural Khan, of course, was first on his list. A Fulbright scholar studying for his master's degree in economics, Khan was a leader among foreign students at Rutgers, was committed to enter Pakistan's diplomatic service upon his return home. To find 3 others to join Khan on the tour, Harry Morgan talked with 150 foreign students at Rutgers and New York City's International House. Beyond a warped point of view about the United States, his guests-to-be needed certain qualifications—a winning personality, a sufficient facility in English to communicate to Americans an interesting picture of their own countries and customs, and an ability to interpret to their homelands what they saw of this country. After 6 weeks, Morgan had found his three other young ambassadors for friendship.

Dorio Mutti, a student at Rutgers came from Parma, Italy, a town largely Communist. Dorio was acting as U.S. correspondent for his home newspaper, Gazzetta di Parma—and his dispatches had been bitter.

Jose Aruego, Jr., from the Philippines, a lawyer turned artist, was studying at Parsons School of Design in New York. Jose was doing a series of American-life sketches which he planned to send to a Manila newspaper. Titled "This Is America," the drawings were clever caricatures of New York City's worst aspects.

Hugo Vercelli, from Argentina, was a civil engineer attending classes at Columbia University. Handsome and a fiery speaker, Hugo had been a student leader in the revolt against Peron. He had come to the States, "to learn from Americans how to preserve our democracy," had found little chance to learn about "the real America" save through textbooks. Bitterly he said, "I have could read these at home.

Calling the four together, Morgan explained the all-expenses-paid, 2-month trip for which they had been selected.

"But where's all the money coming from, Harry? Are you rich?"

He replied, "Yes. Rich in friends, many of whom I haven't even met." He showed the students the long list of his shareholders who had financed his previous ambassadors-for-friendship tours.

His tentative itinerary covered 38 States. "We'll see a lot of natural beauty," he said. "But mainly we'll meet people, the kinds who make America what it is. You've got your ideas about them. Let's find out of you're right."

When they had examined the itinerary, he asked, "Anywhere else you'd like to go?" One said, "How about Little Rock?" Harry promptly added it. Nothing was to be off limits on this tour.

Needing a car for transportation, Harry wrote to George Romney, president of American Motors. Back came a wire: "What color?"—and a few days later a new red and white Rambler station wagon was delivered, inscribed with the words "Ambassador for Friendship" and the name of the countries represented by the students. From the Hilton Hotels Corp. came a letter offering hospitality in any city where the Hilton organization had a hotel. From friends of former tours came offers of hospitality in their homes, more than Harry could ever use.

After 4 days' briefing on facets of American life by history professor George Frick, the young ambassadors set out to see how the facts fitted their notes. The first leg of the itinerary took them to Washington, D.C., to see the U.S. Government at work, thence to Williamsburg, Va., shrine of the American heritage. Among the first private citizens they met were Harry Golden and Carl Sandberg, in North Carolina.

Golden, author of the bestseller "Only in America," took the boys to his home, talked for hours of his experiences as "a poor kid with all the strikes against him, member of a minority group, growing up in all the wrong places, doing most of the wrong things, but—thanks to the understanding encouragement of Americans of all creeds and colors—managing to snatch a measure of success out of it all."

The day spent with Sandburg at his home was, as one of the students expressed it, "like a visit with Lincoln himself." Sandburg received them warmly, recited for them his poems in praise of America and excerpts from speeches by Lincoln "who gathered the feel of the American dream and saw its kindred over the earth." They left the great poetic interpreter of America's spirit with his words ringing in their ears: "We need your understanding of America. We need you to help us understand your countries. Let's weave the strands of understanding from both ends. Only so can we truly join the family of man."

Sandburg's parting shot: "From here you go to Little Rock. You'll find members of the family of man there, too."

To their surprise they did. At no other place on their tour did their image of what's wrong with America undergo such a sharp change. Harry Morgan saw to it that they met representatives of every shade of opinion on the issues and events that have given Little Rock an ugly reputation around the world. They talked with school board members and teachers, with white and Negro students. Harry S. Ashmore, Pulitzer Prize-winning editor of the Arkansas Gazette, spent an afternoon with them, reviewing the segregation problem from the Civil War to the present.

Nural Khan was fearful at first that his own dark skin would cause trouble. His fears melted fast. Standing on the street the first day in Little Rock, he was approached by a man who, with hand extended, said, "You're one of the foreign students I read about in the paper? As just an average citizen, may I welcome you to my town?"

Hundreds of other average citizens displayed equal eagerness to correct the unhappy image of Little Rock projected around the globe. After every press mention of the students' presence, calls flooded in: "Please give us a chance to entertain these boys in our homes. We'd like them to hear the other side of the story."

"We got the humbling reminder that the U.S. South has no exclusive corner on prejudice," Nural Khan said. "When I get home and hear someone mention Little Rock, I must remind him that we Pakistanis have not entirely banished our caste system." Dorio Mutti wrote home, "Before we condemn Little Rock, we should remember that Italians are not bereft of their prejudices toward Ethiopians."

Everywhere across the country Harry Morgan showed his students how average Americans live, work, play, worship, think. He took them to church clambakes, and ball games; to PTA meetings, women's clubs, and political rallies; to factories and industries to see how management and labor get along; to courts to see how U.S. justice works.

While traveling through the West, one of them said, "Look, Harry, how about the American Indians? Don't they hate the Government for taking their land, herding them into reservation?"

Harry replied, "Let's look up some and find out."

In Arizona they visited a section of the Hopi reservation. The chief took them on a tour of a village, introduced them to members of the tribe, told how they spent their time hunting, building homes, working together to make a better life for all. "My people are happy," said the chief. "They are free to pursue their own life and culture as they wish."

Most stops during the trip were impromptu—depending upon where nightfall caught them. "We'll take potluck with American hospitality," Harry told them, "spontaneous and unrehearsed."

Passing a farmhouse at day's end, Harry Morgan would drive up, explain the purpose of the tour—and invariably the whole group would be invited in. They would be fed a huge farm supper, then made comfortable for the night in spare rooms or invited to spread their sleeping bags in a barn.

At an Oklahoma farm, one such stop was extended to 3 days when a farmer and his neighbors insisted on giving the boys a taste of American farm life and themselves an experience in international understanding. The students got up at 4:30 in the morning to do farm chores. Just before they left, a community dinner was organized, and farmers and their families came from miles around to hear the boys tell of their experiences in the United States and answer questions about their homelands.

Passing a park in Hays, Kans., Harry spotted a picnicking crowd, stopped to inquire about road conditions ahead. "If you're looking for America, you've found it," said the chairman, who promptly swept them in to share the food and fun.

In Marshalltown, Iowa, one night, they stayed at the home of a truckdriver. His wife cooked up a big chicken dinner, and the guests were bedded down on cots and sofas in the living room.

Amazed at "such friendliness from people I've never seen before," Hugo Vercelli from Argentina commented, "The most wonderful thing about America is its wonderful 'little people.' "

[1] See "Harry Morgan's 'People-to-People' Adventure," the Reader's Digest, February 1958.

Stops were made in national parks—the Grand Canyon, Yellowstone, the Grand Tetons—where the boys camped out and cooked their national dishes for casual guests, sat around the campfires of vacationing American families, swapping cups of coffee and stories of their experiences.

Another of their distorted images faded fast: that Americans are provincial, isolationist, selfishly uninterested in other peoples and their problems. Said the boy from Pakistan, "You know, I've just realized where my Fulbright scholarship comes from—not from some Government agency, but from the pockets of people like these."

The notion that Americans generally are "basically uncultured," with little interest in art, literature and music, was quickly debunked as the students were taken to art galleries, museums, libraries; saw overflowing crowds at community-sponsored concerts; observed in humble homes well-stocked bookshelves and stacks of recordings of the world's finest music.

Said Mutti, the Italian, "The thing that amazes me is that Americans don't depend on government, as we Europeans do, to provide their cultural programs. They sponsor them themselves, pay for them themselves."

The Communist-inspired stereotype of the "greedy American capitalist" underwent sharp revision at the home of a wealthy industrialist in Michigan. "We expected to find him huddled over a stock ticker," said Vercelli. "Instead we found him in his basement, in overalls, hammer in hand, repairing a table for a library he'd founded. He talked at length about the educational foundation he had set up, and the fun he was having in giving away practically everything he had."

Areugo added, "Wealthy men in our countries don't do such things."

American family life—formerly pictured for them as "disrupted and spoiled by easy money and easy living"—also was a revelation. Speaking before civic clubs or giving newspaper interviews, they told their audiences, "Nobody is so unjustly maligned in our countries as the American woman." They stated their amazement at discovering "how smoothly she runs her home without servants, all the while serving as wife and mother, cook and seamstress, counselor and chauffeur—yet somehow finding time for community service as a volunteer worker."

As for America's alleged loose living and immorality, one told a reporter, "We've visited towns all across the country; none of them looked like 'Peyton Place' to us." Another demanded, "Why do you allow your movies sent abroad to misrepresent you so horribly?"

Perhaps the sharpest effect was registered by Dorio Mutti's weekly articles on America publised in his Communist hometown's Gazzetta di Parma. His descriptions of Americans (the Iowa truckdriver who can afford to have a TV set in his home and a new car in his garage, or the housewife in Salinas, Calif., who stayed up late to wash and iron our laundry) created a sensation. Parma's Communist mayor told Dorio's father, "Your son is giving us an understanding of America we have never had before."

The tour over, three of the students returned to their studies. Nural Khan applied to the U.S. Information Agency in Pakistan for a job. "I'd like to spread my message about America," he said, "before entering my country's diplomatic service."

Following his graduation from Rutgers University this June, Harry Morgan plans to devote his full time to widespread development of his ambassadors for friendship program in the United States. Next summer he will conduct another tour for students from abroad. As he says, "For generations the Statue of Liberty in New York Harbor has been inviting the world to send its tired, its poor, its huddled masses. Today they're sending us their brilliant, their gifted, their leaders-to-be. It takes so little—for an individual, a group, a community—to show these, too, at firsthand what American freedom is."

Essential: Voting Rights

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. DADDARIO. Mr. Speaker, the Hartford Times recently carried an editorial regarding the current discussion in the other House of legislation to reinforce the guarantees of civil rights necessary to all our citizens. This editorial analyzes the contribution made to that great debate by the able junior Senator from Connecticut. I think that speech and this analysis of its main points deserve the attention of all concerned with this issue and I offer it for the RECORD:

ESSENTIAL: VOTING RIGHTS

This session of Congress, as Senator THOMAS J. DODD, has pointed out, will have a potent hand in the issue of civil rights. If it refuses to reform the racial injustices which bar Negroes from the exercise of citizenship in the South, then through inaction this Congress will ratify an unconstitutional system there—a reign of fear, ignorance, and prejudice.

Senator DODD strikes to the heart of the issue when he says that the question of voting rights is the civil rights issue stripped down to its essentials. Men can correct the wrongs done to them if they have a vote. Without it, revolt or vassalage are the only alternatives. Responsible citizens of this country will promote neither.

In a Senate speech studded with specific examples of voting right violations, Senator DODD on Monday asserted that there is a conspiracy which has many faces to bar the southern Negro from the polls. It works in part through the law, in part through legal abuse, and in part by defiance of law. The conspiracy exists by crude violence and subtle social and economic reprisal, as the Senator notes.

Most viciously the conspiracy against human equality in civil rights nestles in a web of false tradition and cultivated ignorance of which most Americans today are ashamed. We do not believe that any man's color implies a nautral inferiority.

Still, there are those who call themselves Americans and who do believe that, and fight in the U.S. Congress for that belief, even in this year of 1960.

To perpetuate their prejudices they have created a maze of State and local barriers against Negro voters. These, Senator DODD proposes, must be stripped down and replaced by ironclad Federal guarantees and protection of voting rights.

Those who oppose such protections mask their real attitude behind the more reasonable sounding but unconstitutional assertion of complete State sovereignty in matters affecting the civil rights of citizens.

It may be that the challenge to Federal authority in the field of civil rights which is now being made cannot be settled except by the most outright and full use of the Federal power. There can be no doubt of its applicability.

Senator DODD referred to this power in his speech when he read from the Constitution that the Congress may at any time make or alter rules for electing Senators and Representatives, and from the 15th amendment which provides that Congress shall have the power to enforce the right of all citizens to vote.

As he explained, "The Federal Government can, if it chooses, take over the entire election machinery for Federal elections or it can leave in the hands of the States, or it can devise a combination of both forms of control.

"The Federal Government can, if it chooses (in Federal elections) man all the polling places in the country with Federal officials, or it can permit the job to be done by State or local officials; or it can impose minute regulations upon State and local officials which take precedence over State and local laws; or it can operate through both Federal and State officials and under the laws of both."

Senator DODD further stated that if the Federal Government chooses it can "prepare and maintain all election records for Federal elections, from the registration of voters to the counting and maintenance of ballots; or it can allow the States to perform this function.

"The power of this Congress, therefore, to work its will on the Federal election process is limited only by its consideration of what is necessary and prudent."

To make possible the enforcement of the right to vote in State and local elections, the Senator would require civil rights legislation this session for the keeping of registration and voting records in all districts and to prohibit State or local governments from concealing or destroying such records. Further, such records would be preserved, open to public inspection for 5 years after being made.

He asks laws to govern the responsibilities of registrars and a program of federally supervised registration with procedures "so simple and machinery so ample as to achieve, within a period of 2 years * * * registering of every qualified citizen."

It seems inevitable that this session of Congress, conscious of its powers, will produce the legislative strength to act in the way which Senator DODD suggests, for the national will demands it.

One would rather have seen the change wrought by the Southern States intelligent realization of facts and by persuasion instead of by this final and necessary bending by power. But there is a time for persuasion, and it has run out.

Pollution Problem No 3: Who Is Spoiling Our Good Water Supply?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Atlanta Journal of December 29, 1959:

POLLUTION PROBLEM NO. 3: WHO IS SPOILING OUR GOOD WATER SUPPLY?

(By Luke Greene)

Streams and bodies of water that form our chief sources of water supply can be easily contaminated nowadays by great concentrations of people and industry.

Expanding industry cannot escape its particular responsibility, and if it takes the long-range view it is bound to see the advantages of strict pollution control.

The wastes from our industries are as varied and complex as American industry itself.

Our technological aggressiveness and the volume of our output have combined to complicate the problems in pollution.

INDUSTRIAL WASTE

Industrial waste, generally consists of oils, acids, chemicals, greases, mineral salts, lignin and animal and vegetable material. Some are virulent, others noxious, and still others merely nauseous, and offensive to the eye and nose.

Some of these wastes are highly poisonous and corrosive. Others can be more damaging to water quality than sewage.

Those industrial plants that don't bother to treat the water used in their production processes before it again is released into streams or lakes frequently are creating serious pollution troubles.

The industrial wastes may kill fish as well as all other living organisms that are so important to nature's balance in water.

This naturally arouses the game and fish commission and the hordes of fisherman who believe our abusive water practices are thwarting their efforts to promote sound conservation of wildlife.

Atlanta recently experienced a pollution problem when large numbers of dead fish were discovered floating in the South River. The trouble was diagnosed as waste contamination by investigating agents of the State game and fish commission.

Perhaps equally frustrating to the water conservationist is the large number of cities and towns in Georgia that still pour untreated sewage into rivers, sometimes near the headwaters of our finest lakes.

The chemical changes that take place might be described as a kind of leukemia in water.

The bacteria in the water (and the raw sewage itself) in time will "eat up" the organic portion of the material and cause its eventual decomposition and disappearance. However, this biologic decomposition consumes oxygen and when the oxygen in water is used up by such a process, all other life that depends on it dies.

Not only does this mean the end of fish, shrimp, crayfish, mussels, clams, oysters, snails, beneficial insects and their larvae, and certain kinds of plant life, but animal and bird life in the vicinity may also disappear.

There is likely to be a foul stench that people for miles around will recognize as the mark of an aquatic graveyard.

Through the years the Georgia Department of Public Health has done a fine education job in promoting construction of sewage treatment plants. However, these plants do not materialize overnight as one can readily see from studying a map of the State showing the large number of cities and towns that still dump raw sewage into watercourses.

Before a municipality can finance and construct a sewage treatment plant, public support for it has to be aroused. Once that happens, there possibly will be a demand to float bonds for the needed project.

But the final decision still rests with the people themselves, and until they realize what they're doing to their streams there may be little action of any kind. Few cities are anxious to spend money if they can get by without it.

SOIL EROSION

One other abuse that has its effect on the streams is land erosion, but fortunately soil conservation programs are helping to lessen this damage.

Judicious use of grasses, cover crops, terraces, and tree plantings will largely reduce silt in the streams, and almost everywhere in Georgia we can see heartening evidences of this kind of improvement.

However, there are still some things that Georgia should be doing to reduce the disastrous consequences of pollution.

Address of John J. Allen, Jr., Under Secretary of Commerce for Transportation, Before a Meeting of the 15th Annual Convention of the National Limestone Institute, Inc., Hotel Statler Hilton, Washington, D.C., January 21, 1960

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech delivered by my good friend, the Under Secretary of Commerce, Mr. John J. Allen, Jr., before a meeting of the 15th annual convention of the National Limestone Institute, Washington, D.C., January 21, 1960.

Mr. Allen's speech follows:

ADDRESS OF JOHN J. ALLEN, JR., UNDER SECRETARY OF COMMERCE FOR TRANSPORTATION, BEFORE A MEETING OF THE 15TH ANNUAL CONVENTION OF THE NATIONAL LIMESTONE INSTITUTE, INC., HOTEL STATLER HILTON, WASHINGTON, D.C., JANUARY 21, 1960

I welcome the opportunity to discuss issues of transportation policy with an important producer group. You are, after all, the customers whom transportation must serve, and communications between buyer and seller are always important.

From your convention program I can see that your interest in public policy is wide ranging, covering construction, agriculture, and industry, who are your customers, as well as transportation and labor, sectors of the economy from whom you buy services. While in one sense I must give you a sales talk as a representative of the broad field of transportation, in another sense I am one of your best customers because of my interest in the highway program. I see, however, that both Ellis Armstrong and the Honorable GORDON H. SCHERER are on the program this afternoon, and I can assure you that the highway interest will be well taken care of at that time.

The general significance of a national transportation policy should not be difficult for a producer group to comprehend. Transportation is a collection of producer industries, dedicated to marketing a service which must be produced just as the output of your own group of industries. Transportation producers are faced by the same problems of competitive elements, taxation, labor, and future public need which are the concern of your own convention. These concerns form the proper basis of national transportation policy, and it is to these factors which the subject matter of regulatory legislation and public investment in transportation facilities should conform.

As a producer industry, transportation must expand its capacity to meet the needs of its customers, its services must be priced to reflect costs and service quality, and it must be alert to new technical developments useful in extending its services or increasing its efficiency. The public interest will be served when all these industrial policies are in effect. Public policy in transportation should be dedicated to the encouragement of these producer objectives. Transportation is, after all, a business, just as your own activity is a business, and the objectives I have outlined are held in common with all business enterprise.

Since transportation is a business affected with a public interest public policy is concerned specifically with regulatory objectives. In the minds of many people regulatory policy is the sum and substance of national transportation policy. To many, national transportation policy is put in capital letters and is construed to mean solely the preamble to the Interstate Commerce Act.

I have a somewhat wider application of national transportation policy. Government not only regulates, it promotes transportation. One of its principal methods of promotion is through direct provision of facilities such as highways, airports and airways, and inland waterway and harbor facilities. The investment in these facilities is a concern of national transportation policy in the broader sense.

National transportation policy should also be concerned with the impact of general public policy such as taxation, Government procurement, and labor legislation on the objectives of transportation as an industry producing a service needed by the public.

Public policy problems in regulation, promotion, and impacts of general governmental policies should be analyzed in terms of common principles before decisions and recommendations are made. The most important common denominator is the need of the public for transportation services, both now and in future years. This means essentially analysis of the growth trends in our economy to find out how much transportation will be needed, how much additional investment in transportation facilities will be needed to serve economic growth, and how public policies in regulation should be adjusted to accompany the growing needs of transportation.

Our present knowledge in all these fields is deficient. For that reason public policy development in transportation has groped in the dark. As a result of the public groping, business policy in the transportation industry itself has been affected adversely. Transportation policy has been the victim of social lag; economic growth and technical developments have rendered past policies somewhat unsuitable for present conditions.

This situation is not exactly new. There has been an intensive quest for a revised basis for transportation policy for at least two decades. In this administration we have had the report of the Presidential Advisory Committee on Transport Policy and Organization in 1955 which led to a nationwide reappraisal and discussion of the fundamental issues of regulation. The widespread discussion of regulatory isues set the stage for some needed changes in laws affecting common carriers. Following the discussions engendered by the Advisory Committee report and the intensification of the transportation problem, the Transportation Act of 1958 was passed with additional changes in the emphasis on regulation.

The quest for a better transportation policy continues. The President in his budget message of January 1959 directed the Secretary of Commerce to conduct a fundamental study of the entire transportation policy problem. Our study and recommendations are nearing completion. The Congress, through the Senate Committee on Interstate and Foreign Commerce, is also appraising national transportation policy through a broad study of the many problems. Private groups and foundations are also evidencing concern about transportation problems and the losses they cause to our economy. Only last week President of the National Acad-

emy of Sciences announced to a meeting of the highway research board—which Mr. Burgraff represents here today—that he will sponsor conferences this summer among scientific leaders in the transportation community to formulate a common research program to meet the deficiencies in our knowledge of this vital subject.

Fundamentally, one question rises above all others. Are we denying economic choice to the user of transportation so that he is paying more than he wants to or should? In other words, is there waste in terms of business and economic objectives?

In our society we believe that free economic choice is the foundation of our economic progress. Free economic choice is believed to bring about the most efficient allocation of resources. It provides the incentive for free enterprise to develop the markets which have raised our present standard of living.

Much of our regulatory policy has come to us from a past era when economic choice was not technically possible on the same scale as today. The basis of our present-day transport regulation is stated in the Transportation Act of 1920—40 years ago before we had a modern highway system, before our waterways were built to today's standards, before the airplane was anything but a prototype machine. The shape of our present regulatory laws was cast in the Transportation Act of 1940—20 years ago when we had just emerged from a great depression and we were not so conscious of the opportunities and problems of economic growth.

It is certainly time for a fundamental reexamination of both the shape and the philosophy of our common carrier regulation. Regulation must not be utilized as a means of thwarting the free economic choice of shippers. Regulation must not warp the development of transportation systems in their response to economic change and economic growth. These two principles mean specifically that rate structures must reflect the conditions of cost and service value in a competitive market, and that the control over carrier entry, consolidation, and finance must allow a rational response to the growth and changing character of the national economy.

If free economic choice is reflected in the market for transportation services, it will have its effect on investment in transportation facilities. This means public investment as well as private investment. For transportation is most unique among industries in its reliance upon publicly provided facilities for its basic operations. We have had a serious problem in finding money and in using wisely the money we have found for such things as highways, waterways, airways and airports. The investment in these facilities should more nearly reflect the transportation economy of the Nation.

We must learn better how to program such facilities to take care of dynamic growth. The determination of the choice of the transportation agency to be used by a shipper should be left to free enterprise rather than Government fiat. There must be balanced development of our transport facilities to meet the needs of our Nation—now 50 States rather than 13.

One of the best means of accomplishing a relationship between economic need and public investment is to require the beneficiaries of public facilities to pay their equitable share of the cost. In business we expect that the price we charge will reflect in some manner the cost of doing business. The cost of doing a transportation business should reflect the cost of both the private and public investment in equipment and facilities dedicated to a transportation business. This is generally true today in the highway field which is now almost entirely financed from user taxes. It is not yet true in the field of aviation or inland waterways.

We have found in the highway field that the user groups pay close attention to the scope of the highway programs and insist strongly that highway programs concentrate on the projects of greater value to the users. When it appears that the highway program will require increases in taxes the user pressure for an augmented program is tempered by the realization that this will increase his own costs. This has been very evident in the experience during and following the crisis in highway finance during the last session of the Congress.

If equitable systems of user charges could be devised for other publicly provided facilities, the desires of the user groups would be conditioned by close economic calculations of the benefits they would derive from additional public expenditures. There would be a tendency to encourage the growth of public expenditures in these fields to those actually required to meet the growth of transportation need as reflected in a market of free choices. It is axiomated that people are more careful in demanding things they have to pay for.

Transportation differs from other production industries only in its dependence upon publicly provided facilities and in its relation to regulatory agencies. Both public investment programs and regulation should be administered to preserve the production objectives of transportation. Transportation is produced for a market, it is a part of the complex of economic activities of which your own industry is another vital part. Economic considerations should be the fundamental guide to public policy in transportation as in other parts of our industrial structure.

As a business activity transportation should function in a competitive environment, marketing its service in accordance with the need and demand. Regulation should allow the full expression of this economic objective. Transportation should likewise be free to expand or contract in line with changing economic conditions. True, these freedoms should be subject to overriding aspects of public interest. But public interests should be clearly defined in law, the law should be kept up to date to accommodate basic economic changes, and administration of regulatory programs should be based on expert knowledge of the costs and economies of transportation services.

Continuing review and study of these matters for more than a decade have shown that our regulatory philosophy and form have not kept up to date with our dynamically growing economy. With the prospects for future growth the lag will grow wider.

All American industries will be faced with the problem of supplying the growing markets of the future. The future will be estimated and sources of investment funds will be found to increase the industrial capacity for economic growth. If necessary, public policy will provide encouragements and incentives for rapid expansion.

Transportation has the same problems and the same goals. The need for transport service will grow at least as fast as the growth of the whole economy. Unprecedented loads will be placed upon our transportation systems. The problem will not be, as some would have it, the division of a given traffic among many carrier groups so that the increase of one will be at the expense of the other. The problem will be to find capacity for a vast increase in traffic. All or most forms of transport may expect absolute increases in traffic. Their main problem will be to finance expansion. The extent to which each form of transportation grows should depend on the demand for the service as reflections of the cost and market price structure.

National transportation policy should be thought of as one part of our general national approach to the problem of business enterprise and the expansion of our economy to meet the needs of our people. The problem of transportation can be solved along lines similar to the main concerns of other production activities. It is the quantity of the goods and services and their fair competitive prices that are important, not the words used to describe them. The future of transportation is as good as the future of our entire country. Our policies should reflect this fact and be adjusted accordingly.

The United States in the Atomic Age

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech I made at the annual communion breakfast of the Grace Church at Manchester, N.H., on February 22, 1960, entitled "The United States in the Atomic Age":

THE UNITED STATES IN THE ATOMIC AGE

(Speech by Congressman CHESTER E. MERROW at the annual communion breakfast of the Grace Church, Manchester, N.H., on Monday, February 22, 1960)

GEORGE WASHINGTON IS CHIEF ARCHITECT OF THE REPUBLIC

We commemorate today, the 228th anniversary of the birth of George Washington—general, first President, and Father of his Country. Washington's birthday is always an important occasion for Americans. At this time, we give particular attention to the outstanding and enduring contribution of this great personality not only to his own country but to the cause of freedom throughout the world. Washington towered high above his contemporaries and, as the years have come and gone, men have constantly entertained a deepening appreciation for the mastery of the statecraft and the leadership of our first President whose stature is, I am sure, destined to hold a position of dominance through the centuries.

For the September 1953 issue of the annals of the American Academy of Political and Social Science, I wrote an article entitled "U.S. Leadership in a Divided World." I was much interested to hear President Eisenhower, in his state of the Union message on January 7, 1960, say, "We now live in a divided world of uneasy equilibrium, with our side committed to its own protection and against aggression by the other."

In the article to which I have referred, I stated, "Our Republic occupies a destiny-given position of leadership in a sharply divided world." I emphasized past and present critical periods in the history of the United States and concerning the first, so closely identified with the leadership of George Washington, I included two paragraphs which are as apropos today as in 1953 and which will be appropriate for all the decades to come:

"In the beginning years of this Nation, Gen. George Washington, who has been affectionately termed by his own and succeeding generations as the Father of his Country, displayed qualities of leadership and statesmanship not approached by any other individual in the supreme art of statecraft. Washington holds his place in history, constantly growing in stature, achieving immortality in the hearts of millions because

of his unique contribution to his country. For three reasons he towers above other prominent figures in history: as leader of the Revolutionary Armies he won freedom for the United States; as president of the Constitutional Convention, he held the delegates together until they wrote what is beyond doubt one of the greatest documents created by man; and then, as first President of the United States, General Washington set laudable precedents for his successors.

"Truly he was the chief architect of the Republic. Fortunately this leader of leaders had the foresight and vision to lay the foundation making possible the structure of the Republic which we proudly possess in these hours of unprecedented trouble. Washington's work has become increasingly important and is of outstanding significance to the free world in this time of grave peril. The principles which guided his actions are the principles that must be established in the world today if men are to become truly free. Actually the entire free world is indebted to the work of Washington, for had it not been for his foresight and vision and for the ideas which motivated his conduct in public affairs, the United States would not have developed and would not now possess the power and freedom that it has today. No other general, no other statesman, no other diplomat has achieved the stature of General Washington."

We could well ask ourselves on this occasion why is it that no other general, no other statesman, no other diplomat has achieved a similar position in history to that held by General Washington? The answer to this query, I am convinced, is found in his ideas, his ideals, and his philosophy of life plus a most unusual ability to act upon fundamental principles.

No man in history has broken with the past so completely as did General Washington and, at the same time, no man has ever acted upon the principles which human experience had—by ceaseless trials in prior history—found to be applicable to ever-changing conditions which every generation must face. George Washington never sought to maintain the status quo, and yet he did not depart from or discard the ideas and the ideals that had lifted a large and growing portion of mankind from the law of the jungle to the place that civilization had arrived when he had the opportunity to hold for such a crucial period the center of the stage in American history. He so conducted himself that his personality then, as now, commands a central position on the stage of world history and will continue to do so as long as human beings aspire for freedom and a complete release from tyranny in all its forms.

Washington departed from the past in leading the American Revolution. He departed from the past in creating the Constitution of the United States—I say in creating the charter of our liberties because, even though he did not write it, his dominant personality held the framers to their task until it was finished. He departed from the past in setting precedents for his country and in discarding the mantle of power—always so jealously held by dictators—for the sake of making certain that in this country the people—and not the tyrants—should determine our destiny. At the same time, Washington held to, and fought for, the principles of freedom, individual liberty, and the ideas and ideals of democracy which generation after generation from ancient times had succeeded in hammering out on the anvil of human experience.

Now then comes the question, What do we derive from the life and work of Washington that will help us in this second decade of the 20th century?

THE WORLD IN WHICH WE LIVE

We must be familiar with the type of world in which we live in order to evaluate and solve the problems that confront us. This is the atomic age. On July 16, 1945 the United States exploded a fission bomb in Alamogordo, N. Mex. On February 13, 1960, France exploded an atomic bomb in the Sahara. Within this period of less than fifteen years there have been many such explosions. Today there are four atomic powers—the United States, Great Britain, Russia and France.

We have fission bombs; we have fusion bombs; we have nuclear submarines; we have missiles with nuclear warheads; and at the same time we are making rapid progress on the harnessing of nuclear energy for peaceful purposes. The mind of man has penetrated the hidden recesses of the atom, releasing energy sufficient to sear the earth or to construct a paradise. Therefore, we must solve our social, economic, political and spiritual problems if atomic power is to advance and not destroy civilization.

We live in a divided world with the free nations on the one hand and those enslaved by communism on the other. Millions of men and women live in underdeveloped areas. These people are seeking a better way of life. There is a growing and justifiable desire to receive the benefits of modern technology. The tide of nationalism surges forward, and we need only think of the continent of Africa where there are now 11 independent nations; there are 3 that will achieve independence during 1960; and, in addition, there are 3 in the status of negotiation and will probably become independent during 1960. Asia is in ferment. Explosive situations exist in Latin America. Economic problems beset us. Defense of the free world is of prime importance. The race for missile superiority is ever upon us.

In the presence of world conditions as I have sketched them, are we to maintain our standard of living, our economic power and our position of leadership? How are we to solve the problem of controlling nuclear power? How are we to proceed in the conquest for space? How can man develop a workable disarmament program? How can an international order, which will enable all people to live in peace and enjoy the benefits of technological revolution, be brought into existence?

I am deeply convinced that we cannot meet the issues of the day by a determination to follow the patterns of past procedures or by insisting on maintaining the status quo. I take it that, in both national and international affairs, we must—as did General Washington—break with the past, taking with us only the ideas that have proven to be of value and try to solve the problems of the atomic age with a new and enlightened approach. Such procedure is applicable to all our problems—national and international—and furthermore, there is no sharp line of demarcation between what is domestic and what is foreign.

RESPONSIBILITY OF THE FEDERAL GOVERNMENT

The Nation has expanded since the time of Washington to include 50 States. Economically and militarily, we are the strongest country the world has ever known. Methods of communication and transportation have brought the Nation much more closely together than it was in the time of the Father of our Country. With our rapid advancement socially, economically, and politically, the Federal Government has become involved in a wide variety of activities, and the responsibility has constantly grown.

In the economic report of the President transmitted to the current session of Congress on January 20, 1960, we find these words which are in keeping with the foregoing: "In a free society, government makes its major contribution to economic growth by fostering conditions that encourage and reinforce the efforts of individuals and private groups to improve their circumstances. This includes the preservation and enhancement of competition, the maintenance of a stable currency, the moderation of fluctuations in employment and output, participation in the development of human and natural resources, the enhancement of personal security, provision of a sound national defense, and the maintenance of mutually advantageous ties with other countries."

It is basic that the duties and the powers of local governments must be assiduously preserved. No one denies this but in cases where local governments find that their capabilities and capacities cannot meet the legitimate needs of the people, then the Federal Government certainly has an obligation and a responsibility.

The Federal Government is engaged in many enterprises calculated to improve the general welfare. For example, it is now recognized that social security is as much a part of the national fabric as the free enterprise system. Our efforts must be directed toward the highest possible level of prosperity, health, education, employment and security consistent with the sound principles of government. As we seek to gain these objectives, every care must be taken that the private economy of the Nation is not injured.

As a result of rapid national development in a technological age, there has been—and still is—a growing inability, by virtue of present-day conditions surrounding us on the part of local governments, to meet many of the requirements of 20th century United States. We therefore should not be reluctant and should not hesitate to employ the powers of the Federal Government for legitimate and constructive purposes which aid in improving the welfare of our people.

Be it an amoeba, a galaxy, or an economic system, nothing stands still. I am certain that if Washington were alive today, he would hold that in the light of current conditions the Federal Government must rise to its responsibility in many fields in which prior to the 20th century, it was not engaged. He would, I am sure, not stand for the status quo that existed decades ago.

A BALANCED BUDGET

As we advance in the diversified fields of governmental activity, our goal must be the achievement of a balanced budget, the preservation of the value of the dollar and a check on inflation. I am not disturbed by the magnitude of the Federal budget. For the next fiscal year, the President has estimated that spending will be $79.8 billion which is $1.4 billion above the current fiscal year. He has also projected estimated receipts at $84 billion—an increase of $5.4 billion over the present fiscal year. This gives an estimated $4.2 billion surplus which the President has urged be applied to reducing the national debt which today stands slightly in excess of $290 billion.

In subsequent fiscal years, the Federal budget—which for a long time in our past history was under a billion dollars—may be much larger than it is today. We have seen it increase rapidly and we will continue to see it become even higher as the United States continues to grow. May we not think of the Federal budget as a measure of our growth, our economic activity, our influence throughout the world and our responsibility as the foremost free and democratic power on earth?

I certainly am not for the concentration of excessive powers in the Federal Government, but we are all a part of the Federal Government and if anyone can demonstrate

how we can operate as a nation without being engaged in farm issues, highway construction, improved social security legislation in better health and welfare programs, in the improvement of our educational system, in providing for better housing, in making plans for urban renewal and other programs to cope with problems—too large and too difficult for the local communities to handle—and in the construction of an impregnable defense, then, it would be impossible to explain how we can cut billions from the Federal budget.

SENATOR AIKEN ON THE BUDGET

Senator GEORGE D. AIKEN, in a Lincoln Day speech delivered a year ago said that Mr. Lincoln had to make a choice between values that were conflicting and he chose the greater values. To quote the Senator directly, he said, "He could have balanced the budget and lost the Union. He could have held down the national debt and perpetuated slavery. * * * I have little sympathy," continued AIKEN, "for those of our party who would cling tenaciously to the status quo. I have no desire or intention of standing still under their leadership."

I do not mean to imply by quoting my good friend, Senator AIKEN of Vermont, whom I have known for over a quarter of a century, that I am opposed to balancing the budget and I am sure that Senator AIKEN is not opposed to balancing the budget, but I have called attention to his remarks to point out that we must always choose the greater values. We must, for instance, be absolutely certain that our military capability is sufficient in every field to deter Soviet aggression, and whatever the cost to get in that position, the cost must be met. As the President said in his budget message on January 18, 1960, "Our national objective remains as before—peace with justice for all peoples. Our hope is that the heavy burden of armaments on the world may be lightened. But we should not delude ourselves. In this era of nuclear weapons and intercontinental missiles, disarmament must be safeguarded and verifiable."

We must not, by platitudinous phrases, give the impression that we fear change. Positive leadership is required. Progressive leadership is imperative as we seek to serve the legitimate needs of our people, always making certain that our policies are administered in such a way as to improve our national welfare. This, I believe, is what Senator AIKEN had in mind.

There are many problems confronting us with which we must grapple and in the solution of which we must exercise new thinking and new action. As Washington broke with the past in meeting the issues of his time, so must we abandon prejudicial approaches, shun old methods that have resulted more in confusion than in solution, seek new approaches and endeavor to resolve our difficulties—not in terms of trying to maintain the status quo but in terms of moving ahead.

Agriculture

An abiding and controversial problem is that of developing an agricultural program. In the President's recent farm message to Congress, he stressed particularly the wheat situation. He pointed out that the Federal funds tied up in wheat amount to about $3.5 billion and that the cost of stabilizing the wheat bill is $1.5 million a day or $1,000 a minute. The President asked for legislation to meet the farm situation. He suggested three guidelines:

1. Any price support must be related realistically to whatever program the Congress selects in respect to the control of production, pointing out that the higher the support, the more regimented will be the farmer.

2. The "support levels must not be so high as to stimulate still more excessive production" or so high as to increase subsidies necessary to hold the world outlets or reduce domestic markets.

3. We must not give subsidy payments to programs for crops in surplus, and programs which would invite harmful countermeasures by our friends must be avoided. He urged that we "act sensibly and act swiftly."

I am for a drastic reduction of the price support program which, in my opinion, is failing to meet the present problem and challenges us to do something different in the field of agriculture. There are in process now hearings before the agricultural committee, and certainly we must break with the past if we are to prevent the constant increase of agricultural surpluses. The President's budget contains a suggested appropriation for our agricultural purposes of $5.6 billion. A new approach in agriculture is long overdue.

Education

An ever-present and controversial issue is Federal aid to education. Recently, a bill carrying $1.8 billion was passed by the Senate providing $1 billion for school construction over 2 years and $800 million in grants for a 2-year period to help in teachers salaries. As recently as the 9th of February, a House subcommittee tentatively approved a bill limited strictly to grants for construction. The measure calls for $325 million over a 3-year period. No matching funds would be required for the first 2 years but a 50–50 matching basis would be put into effect the third year.

Certainly, something must be done in the field of education since, without trained people, we cannot meet the demands necessary for our security in the missile age. It is time that we pulled ourselves out of the pattern of past operations and actually solve our educational problems.

Civil rights

Although the Civil War ended nearly 100 years ago, we have at every session of Congress the problem of civil rights. I signed the petition to bring the civil rights bill to the floor of the House. Under increasing pressure, the House Rules Committee has now decided to bring a civil rights bill to the floor on the 10th of March. It is impossible to tell what the final legislation will be like, but there have been proposals for a measure containing a referee provision for voting and authorizing Federal assistance to enable Negroes to register in the areas where the courts find a discrimination.

Abraham Lincoln freed the slaves at the time of the Civil War but today we have a continuing fight in making it possible for the colored people to have the rights to which they are entitled under the Constitution of the United States. There is no area in which there is more urgency to break the status quo and stop looking backwards than in civil rights.

Taxation

Everybody agrees, including Members of Congress, that the tax structure needs to be revised so that loopholes will be closed and the burden of taxation will be evenly and equitably distributed among our people. This must be done as soon as possible. We must break with the past, revise the tax structure and move to the future with a better instrument of taxation than we possess now.

Latin America

To the south of us, Cuba is in turmoil, apparently aided and abetted by the Communists. There is agitation in Panama. Explosive situations are ever present in Latin America. It is essential that we devise programs which will produce positive results in our relations with the nations in this hemisphere.

More attention must be given to Latin America. New policies should be developed. Economic reprisals will defeat our own end just as sending Marines into that part of the hemisphere in the old days made for ill will and disillusionment. Hard, vigorous thinking and programs calculated to relieve tensions in this area is necessary.

Foreign affairs

In a recent report of a Special Study Mission in Europe (in which I participated), we recommended that, in view of the great industrial development of Western Europe resulting from our most successful Marshall plan, "Our NATO partners must assume a greater share of the common defense effort."

We also recommended that "The industrialized countries should give high priority to the development of long-range plans for the assistance to underdeveloped countries." This is what I mean by breaking with the past and yet not discarding what is good. Our aid must continue but we must constantly have more cooperation on the part of the recipients.

Two economic blocs have recently been formed in Europe—one, the European Community or the Common Market, and the other the European Free Trade Association, commonly called the Outer Seven, led by the British. Only recently, Under Secretary of State Dillon attended a conference in Paris with representatives of these two trading areas. Out of the conference came plans for the formation of a new economic organization which is to include the countries of Western Europe, Canada, the United States and possibly Japan. This new organization, which will not be formed for a year or so, is a result of new thinking and new proposals of action necessary to prevent the United States from being discriminated against in the field of world trade. It also is for the purpose of securing multilateral help for underdeveloped countries.

One of the major criticisms of the mutual security effort is the mistakes made in its administration. The Foreign Affairs Committee, of which I am a member, is now holding hearings on the program for fiscal year 1961. While the mutual security program is the vital instrument of our foreign policy, it is obvious that many errors have been made in administering it. We must break with the past; we must improve the administration of mutual security but we must not discard the policy. To do so would imperil the achievement of our goals.

NATIONAL DEFENSE

International communism seeks to dominate the earth. The issue between the free and the enslaved world is joined around the globe. The United States is the leader of the free peoples since the economic and military strength of the Republic exceeds that of any other nation. Our gross national product is approaching $500 billion a year. Our standard of living, although there remain infinite possibilities for growth, is the highest on earth.

Due to the ambition and aggressive onslaught of international communism, it is essential that we maintain a strong retaliatory position to deter the possible launching of a nuclear attack—thus, for the purpose of major national security, the budget, which the President presented for the fiscal year 1961—and which is now being considered by the Congress—carries expenditures of $45.6 billion. In the President's budget message of January 16, 1957, are these words, "Our nuclear weapons and our ability to employ them constitute the most effective deterrent to an attack on free nations."

On November 13, 1957, in setting forth our military policy for protecting ourselves and the free world from international communism, the President said, "As a primary deterrent to war, maintain a nuclear retaliatory power of such capacity as to convince the Soviets that any attack on us

and our allies would result, regardless of damage to us, in their own nation's destruction." In the President's budget message of January 18, 1960, are these words, "Our aim at this time is a level of military strength which, together with that of our allies, is sufficient to deter wars, large or small, while we strive to find a way to reduce the threat of war."

In response to a question on our retaliatory power, the President said, as recently as February 3, 1960, "I don't believe that anyone today can destroy all of our capabilities for retaliation, and they cannot destroy today enough of them that we couldn't retaliate very effectively to the point of destructiveness to them."

The clear position taken by the Eisenhower administration in building retaliatory capacity recalls to mind a speech which I delivered on December 15, 1947, in the House of Representatives. In that speech, I said, "Any nation contemplating an attack on the United States will hesitate only if she knows that within a period of hours from the time the attack is made there will be delivered in reprisal a knockout, devastating, retaliatory blow from the air." The only revision I would make in this statement of policy to fit exactly the present situation would be to say, a knockout, devastating, mobile retaliatory blow from the air.

I have lived to see the policy I have been advocating for over a dozen years become the foreign policy of the United States. In the current great debate on the strength of our defenses and on our ability to retaliate as well as to meet brushfire conflicts, there is no disagreement as to the general objective. The objective is to be so thoroughly and so adequately prepared that no one will dare to make an attack upon us.

One of the great battles in the current session of Congress has to do with our missile capability. The generals are not in agreement on how to achieve our overall retaliatory objective. In testimony before committees in Washington, an airborne alert has been urged and an increase in defense spending of $10 billion to $15 billion over the $41 billion in the budget has been suggested. Only recently nearly a billion dollars in additional funds has been recommended for 6 more Polaris submarines—which would bring the total nuclear-powered, underwater craft to 18—and Air Force officials hold that the missile gap between the United States and the Soviet Union is greater than the estimates of the National Intelligence Board.

President Eisenhower has said, "What you want is enough, a thing that is adequate. A deterrent has no added power, once it has become completely adequate." I have great confidence in the President of the United States. I also have respect for the opinion of the military men who are urging greater effort. We dare not make a mistake in the evaluation of the missile situation and the intent of the Soviet Union. Therefore, it would seem to me that the proper course of action is for all the experts to get together, be sure that the facts of military life are interpreted and understood correctly and then take whatever steps are necessary to implement the policy upon which we all agree—namely, that we must have sufficient and adequate mobile retaliatory capacity regardless of the cost.

In order to negotiate from a position of strength for the purpose of achieving disarmament, we cannot afford to make a mistake in our defense capabilities. Failure to take into consideration the present military facts of life, failure to realize that mobile retaliatory capacity must be evaluated in terms of missiles and not in terms of past conflicts may well mean disaster. Any course of action that fails to plan carefully for the future is fraught with peril and disaster.

We all know that one of the greatest issues of our time is that of disarmament and here vision and foresight are demanded. To achieve disarmament, we must be in a position to prevent any power from overcoming us by force. Unless we do this, we invite aggression from those who are bent upon our destruction.

Thus, we could go on to discuss area after area of our governmental activities. The issues are difficult and complicated but not insoluble, and, as we endeavor to solve them, we must move from the status quo, break with the mistakes of the past, preserve what is good and always be willing to employ a flexibility of approach.

OPPORTUNITIES EXCEED PROBLEMS

As we prepare for what lies ahead, we must develop ideas and programs that will meet the issues of 20th century America. The Nation George Washington founded is faced with many problems but likewise we are presented with many opportunities. I hold the apportunities far exceed the problems. So, we should be optimistic—not pessimistic; happy and not depressed even in the face of nuclear fission and fusion; thankful to providence for our destined position of leadership; grateful for an opportunity to develop in peace a better world; and confident and determined that we will make our contribution guided by our faith in the ability of ourselves and our Nation.

If we live for today and not yesterday; if we act on the principles to which the Father of our Country dedicated himself; if we develop programs we need in the present century; if we are willing to move away from the status quo and disregard the archaic procedures that have not brought results; then we have nothing to fear as the greatest free republic that the Author of this universe has seen fit to create.

We must remember, in the phrases of James Russel Lowell, "New occasions teach new duties; Time makes ancient good uncouth; They must upward still, and onward, who wolud keep abreast of truth"; and we must further keep in mind hat the "Future's portal" will not yield to the "past's bloodrusted key."

So inspired by the leadership, statesmanship, vision, and spiritual dedication of General Washington, patterning our approach to current problems on the methods he used—in achieving a place of prominence not only for himself but more important for his Nation—we will succeed in fulfilling our destined-given opportunity of bringing into being a better United States; also a better world, a world of free peoples.

Costa Rican Survey

EXTENSION OF REMARKS
OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. DENT. Mr. Speaker, I would like to submit a brief report for the Congress.

Recently five Members of Congress made a hurried, yet rather extensive, trip to the Republic of Costa Rica.

These men were from various areas of the United States and represented appropriations, labor and education, agriculture, as well as the broad subject of foreign affairs, by their committee activities in the House of Representatives. The Members were JOHNSON, California; HAGEN, California; MONTOYA, New Mexico; CONTE, Massachusetts; and DENT, Pennsylvania.

Accompanying this group were two newspapermen, Bernard Yudain, Time-Life, and Syd Yudain, Roll Call.

This trip was not at the expense of the American taxpayer but was sponsored by Costa Rican public and private interests.

For a quick rundown the following pertinent facts may help to place this small but important Republic in proper perspective.

Costa Rica has a total area of 194,700 square miles, which is slightly larger than Vermont and New Hampshire combined. Eighty percent of the total area is in forest, approximately 15 percent is in pastures and range, and about 5 percent is cultivated.

Total population on January 1, 1960, was 1,148,441, of which more than three-fourths is rural. The population is increasing annually at the rate of almost 4.5 percent. There are 408,104 private property owners listed in the public register. An officially estimated 54.72 percent of the total population is engaged in agriculture for a livelihood.

Agriculture exports, principally coffee and bananas, account for 98 percent of foreign earnings. As the volume of coffee authorized for export is now and will probably continue to be limited by agreement with other producing countries, and as banana production continues to be restricted by Panama disease and other factors, the announced policy of the Government is to expand and diversify the production of other agricultural commodities.

Costa Rica is essentially a country of family-size farms. According to the 1955 census, total number of farms was 47,286. Ninety percent of the farms had an annual gross income of less than 25,000 colones—US$3,771. In 1955 there were 13,384 farms producing sugarcane which is 28 percent of the total number of farms reported. Fifty-three percent of the sugar farms had less than 20 manzanas—34 acres—and 90 percent had less than 100 monzanas—170 acres. The Sugar Chamber reports that there are now 27,000 sugarcane farmers, over 2,000 small sugar trapiches, and 30 small sugar mills. Counting the families of sugarcane farmers and employed laborers, it is estimated that at least one-tenth of the population depends on sugar for a livelihood.

Costa Rican centrifugal sugar production in the 1959–60 crop year will be a record 60,000 short tons. Growing conditions have been favorable to date this season and the area in sugarcane has been increased by about 2.5 percent over the 40,000 manzanas—69,200 acres—harvested the previous crop year.

The increase in both sugarcane area and number of mills in operation during recent years has resulted in an output of centrifugal sugar that far exceeds domestic needs and export quotos. Domestic consumption in 1959–60 will probably total about 40,000 tons. Costa Rica has an export quota of 3,616 tons to the United States and 5,000 tons to other world markets. This will leave a stock of about 12,000 tons at the end of

the season which can be neither consumed domestically nor exported.

Last December 14, the Costa Rican Government officially requested an increase in her United States sugar quota to 12,000 tons in 1960 and 14,000 tons in 1961. The note pointed out that although Costa Rica produces more than twice the volume of sugar produced in Panama the U.S. import quotas for both countries are the same. Nicaragua has a U.S. quota of 14,000 tons but produces approximately the same volume as Costa Rica. Government officials frequently stress that as such a large segment of the population is engaged in sugar production it is of vital concern to keep the small producers economically healthy if Costa Rico is to maintain the principles of democratic government.

After reading the foregoing you begin to get a picture of a country that has more than any other so-called republic captured the spirit as well as the title of a democratic republic. Democracy in action has become a mere slogan in most parts of the world, but one can find it actually operating in this small, but responsible nation.

For instance, the Republic has covered its peoples with social security in job security, protection against dismissal from a job without cause; health and welfare security is extended to all persons. Because of the agrarian character of its economy pensions are not the problem they are in our industrial economy.

The ownership of property is one of the outstanding achievements of this country. Approximately one-third of the population are owners of land. Less than 10 percent own more than 200 acres and the largest sugar and coffee plantation is only 3,000 acres. Compare this with an American owned Cuban plantation of over 275,000 acres and you start to realize the basic difference between this kind of a republic and Castro's Cuba.

Another thing that I am sure impressed my colleagues as well as it did me, was the cleanliness of both the peoples as well as the homes, public buildings, streets, highways, and the country itself.

You were not pushed and pulled around by the usual beggars that appear to be a normal feature of so many other countries.

I was shocked to find that this nation has no army. Its only uniformed group is a combination police-fireman constabulary of 1,000 men, neat, clean, and courteous.

This gave me a thought which I expressed and received a good hearing from all who heard it.

I suggested that it would cost the United States less, create a greater atmosphere for freedom, build peace, and certainly turn more of their economy into welfare, education, and peaceful pursuits if this Nation of ours would assume in reality the hemispheric defense of our Latin American countries and would not give foreign aid unless our friends disbanded their armies.

I asked one question which I would like to pose to our membership of Congress, "Who can they lick in a fight, except themselves?"

Why should we give economic aid to Santo Domingo, Panama, Cuba, or any other Latin American country when they spend one-half or better of their national economy on armies and military installations, and so forth.

It makes about as much sense as me giving my children money for shoes and they go out and buy cap pistols and switchblade knives. They cannot hurt anybody but themselves and each other while suffering in their barefeet.

These countries cannot buy guns and schools both. In the final analysis, if they get into a squabble with a power nation, their cap pistols would not be much good against missiles and A-bombs and the United States would have to move in anyway.

I doubt if any deterrent would be more effective on Russia than a hemispheric defense controlled, manned, planned, and financed by the United States with our NATO connections in the European theater.

In fact, does anyone kid himself into believing that we are not financing whatever effective defense there is in this hemisphere right now?

Another point that should worry us is the insistence by our State Department upon changing agrarian economies into industrial economies.

Let me present here a purely agrarian economy and the danger involved to the Nation's people if we insist upon building an industrial economy in this country in the name of "raising the people's standards." You will note that we are their biggest customers as well as their biggest suppliers in imports.

If we follow the State Department's formula we will put production facilities in that will force mechanization of their farm production and also put them into the market to ship their manufactured products into our market, cutting our own employment and creating a serious employment problem for them.

I asked a planter and sugar mill owner who employs 1,500 workers why he did not mechanize his farm and he gave a simple, but sincere answer:

"What do I do with the people who are thrown out of work?" I could only tell him what our formula appears to be.

We would help them build factories to put these people to work and, of course, we would buy their products so that they could have dollar credits to buy more machinery to put more people out of work and to build more factories to sell more goods to the United States and the rest of the world and to put more people out of work and on and on and on.

He replied that he thought they would be better satisfied in getting a just share of the American sugar quota which would allow them to pick up the slack in their economy because of the tremendous growth rate of 5 percent annually in their population.

They are asking for an increase in sugar quota and when you realize that Cuba gets 3 million tons as against their less than 4,000 tons per year, you cannot argue too much, for this nation declared war the very next day after the United States.

They showed their faith in our friendship as well as giving them a chance to expropriate enemy land and commercial interests. They are a pretty smart people.

They have problems, that is true, but I think they are minor compared to what they will have if they listen to some of our advisers that seem bent upon changing everybody's way of life.

The following chart shows a thumbnail format of their economic operation:

Costa Rican population, 1,148,441, Jan. 1, 1960

	Million
Gross national income 1957 (latest available)	$338
Gross national product 1958 (estimated)	442
1958 ordinary revenues	57
1958 ordinary expenditures	57
Public debt June 30, 1959:	
Internal	42
External	25
Total	67
1959 debt service:

MAJOR EXPORTS, 1953–58

[Percent]

	Coffee	Banana	Cacao	Abaca	Beef	Millions
1953	42	45	5	2	------	$80
1954	41	42	10	2	------	85
1955	54	41	7	1	1	81
1956	50	38	4	2	2	67
1957	39	39	5	1	3	83
1958	52	33	6	1	1	97

MAJOR TRADING PARTNERS, 1957 AND 1958

[Percent]

	Imports		Exports	
	1957	1958	1957	1958
United States	55	51	52	51
Germany	9	10	24	26
England	5	5	1	1
Holland	4	4	3	2
Canada	3	3	9	7
Japan	3	5	1	2

At this point I want to pay my respects and gratitude to the American Embassy staff and particularly to our Ambassador Whiting Willauer.

I am sure I speak for all of us when I say that his grasp of the situation in Costa Rica, his devotion to duties, his personal contact and friendship which was reciprocated by all Costa Ricans, planters, business and governmental officials was shockingly refreshing to this group.

I cannot praise Ambassador Willauer too highly for giving us a thorough and instructive briefing which taught us more in a few short days than we would have learned in months of probing.

The Ambassador talked plainly, factually and without the usual window-dressing. His knowledge of this country, its peoples and its problems both internally and externally is short of phenomenal.

The kind of representation and statesmanship practiced by Ambassador Wil-

lauer will do more to promote good will, sound friendships, trust and faith in our purposes and above all—will not lead our Latin neighbors down the blind alley of unfulfilled promises, exhorbitant goals and unachievable aspirations.

Although in general, I am a critic of our State Department's diplomacy, I take my hat off to Ambassador Whiting Willauer and his staff.

In passing I want to extend my personal thanks to Bill Rodman, agricultural attaché, who traveled with me from morning till night giving me his unvarnished, practical facts on the country and its peoples as he saw it from his vantage point of daily contacts with the problems of their economy.

I learned that the only other request they have made, besides a legitimate sugar quota increase, is for a loan of $10 million for increased experimentations and research to better their agricultural economy and to save it from the ravages of natural enemies, diseases, plant insects, and so forth.

To show you how the days were spent on our quick tour, I would like to present our itinerary as well as some of the officials—United States and Costa Rican—who took time out to make this trip worthwhile:

THURSDAY, FEBRUARY 11

11:50: Arrive El Coco. Lacsa flight 621. Met by representatives of the Camara de Azucareros and William Rodman, American Embassy. Reservations at Hotel Costa Rica.

13:00: Informal luncheon, Hotel Costa Rica.

15:30: Depart Hotel Costa Rica for residence of Ambassador Willauer.

16:00: Briefing, American Embassy. Ambassador Whiting Willauer; Roy I. Kimmel, counsellor of Embassy; William L. Rodman, agricultural attaché; Wyman R. Stone, Director, USOM; James R. Johnston, head, Economic Section.

19:00: Reception in the Legislative Assembly, Alvero Montero Padilla, President of Assembly. Speech by Congressman MONTOYA, of New Mexico.

20:00: Reception at the Costa Rica Country Club.

FRIDAY, FEBRUARY 12 (TRIP TO THE ZONE OF GRECIA)

8:30: Depart from Hotel Costa Rica for the Costa Rica sugar mill.

9:45: Depart for La Hacienda La Eva.

11:00: Short visit to the sugarcane field of the La Argentina mill.

12:30: Luncheon at the Cataluna sugar mill.

14:30: Coffee plantation visit tour.

19:00: Reception at the Presidential Palace, President Senor Don Mario Enchande Jimenez.

21:00: Reception at the home of Senor Don Alejandro Pirie.

SATURDAY, FEBRUARY 13 (TRIP TO THE ZONE OF TURRIALBA)

8:30: Depart from Hotel Costa Rica for the Instituto Interamericano de Ciencias Agricolas de Turrialba.

12:30: Luncheon at the Juan Vinas sugar mill.

SUNDAY, FEBRUARY 14

11:30: Depart Hotel Costa Rica for El Coco airport.

1:30: Depart El Coco on Lacsa flight 620 for United States.

You will note that we attended a special session of the Legislative Assembly. All were pleasantly surprised to hear one of our Members, the Honorable JOSEPH MONTOYA, New Mexico, Democrat, make a short address in response in clear and perfect Costa Rican. The speech follows:

Senor Presidente de la Asamblea Legislativa, Senores Diputados, posiblemente al hecho de conocer yo la lengua que se habla en este bello y hospitalario pais debo el honor, muy grande por cierto, de dirigirme a ustedes para agradecer en nombre de mis companeros congresistas y, desde luego en el mio propio, la forma tan gentil en que hemos sido recibidos por Uds. en este respetable recinto en el cual se debaten con ejemplar espiritu democratico los problemas de la Patria de los costarricenses.

Hace apenas unas pocas horas que pusimos pie en el suelo de Costa Rica y ya hemos podido darnos cuenta de que asiste sobrada razon a los muchos que, mas afortunados que nosotros, han permanecido aqui por largo tiempo y que proclaman las muchas cosas bellas que el viajero encuentra en Costa Rica, tanto en el campo espiritual como en el material. Y seguros estamos de que mientras permanezcamos en esta tierra de maestros, de patriotas y de belles mujeres, cada minuto nos deparara nuevas y agradables sorpresas que viviran eternamente en neustros corazones.

Ustedes y nosotros, todos, sabemos que a la gran staisfaccion de legislar para la Patria, estan estrechamente unidas grandes responsabilidades. Nos toca hacer la ley y la ley por lo general no satisface a todos. Unos nos llenan de elogios y ostros de vituperio; pero ustedes como nosotros, legisladores que somos de dos paises que son ejemplo de Democracia y de respeto a la voluntad de las mayorias, tenemos que sentirnos muy orgullosos de hacer leyes para neustras respectivas Patrias. A veces tendremos la razon y otras veces estaremos equivocados; pero siempre estaremos poniendo nuestro grano de arena en la nobilisima tarea de hacer Democracia y de hacer que neustras Patrias sean trasunto de ese modo hasta ahora insuperado de vivir. Es por ello que mis companeros y yo nos sentimos hoy genuinamente orgullosos de ser recibidos por la Honorable Asamblea Legislativa de la Republica de Costa Rica.

Muchas gracias senores.

There are a few of the organizations and men we are grateful to for their kind and courteous attention to the details while were were in San Jose, the capital city:

Reception committee: Julian Mateo, Ramon Herrero, Gregorio Rojas, Calixto Fabrega, Jorge Dobles Sanchez, Alejandro Pirie.

Junta Directiva de la Camara de Azucareros: Presidente Manuel Jimenez de la Guardia—Licenciado, Vice President Otto Eduardo Kopper Vega, Secretario Arturo Garcia Solano, Tesorero Miguel Monge Echandi.

Junta Directiva de la Junta da la Cana: Randall Garcia Golcher, Camara del Atlantico; Alberto Vega Meroto, Camara del Pacifico; Francisco Amrhein Pinto; Juan Guillermo Brenes Castillo, Asambles Legislativa.

Being a member of the Labor and Education Committee of the House, I was particularly anxious to find out what I could about labor and education programs. I submit a report as I gathered from information provided by Ambassador Willauer and Costa Rican officials.

Comparatively speaking and in generalized terms, Costa Rican labor is superior to that of the other Central American Republics. This is due to a number of factors, among which there might be mentioned (a) a far greater percentage of literacy, (b) a comparatively unmixed inheritance from Spain of habits of industry and frugality, and (c) a long tradition of self-reliance and independence. On the other hand, on the debit side of the ledger there should be mentioned (a) complete absence of any program of apprenticeship training and (b) a tendency to perform work without adequate advance planning and preparation, and in an empiric manner pride in standards of workmanship is beginning to appear, however, there is convincing evidence that with proper training and under adequate supervision, the average Costa Rican can be developed into a skilled artisan, able to perform work which compares favorably with standards maintained in more advanced countries. As an example there might be cited the hundreds of employees of the Inter-American Highway and of the aircraft overhaul shops who have been developed into first-class craftsmen in their various trades and vocations.

In general, there is no shortage of labor, nor is there much surplus. During the coffee harvesting season, there occasionally exists a shortage of labor, but this is as a rule tided over by the employment of women and children. There does exist, however, a constant pressure for social improvement, causing a steady movement from the lower echelons of labor toward better paid jobs. Similarly there is a constant movement from the farm to the city, causing overcrowding and substandard housing conditions in most of the towns and cities.

Traditionally, coffe picking is not considered bemeaning labor in any way. For this reason, many people from above the lowest social strata pitch in to pick the crimson berries which produce a major part of the country's foreign exchange.

By far the largest agricultural operation within the country is that of the United Fruit Co.—bana, cacao, palm oil, et cetera. In round figures the company employs an average of 12,000 persons, a majority of whom are of the agricultural peon class. Within memory, the company has never been confronted with any major labor shortage.

Wages in Costa Rica, compared to the United States, are low. But since productivity of the average worker also is low, the cheapness of the labor is only relative. In general, all wages are based upon the minimum legal rates for agricultural labor on the Central Plateau. Under the law, a National Wage Council revises the minimum wages rates every 2 years, recommending change to the Executive, who as a rule accepts the recommendations of the Council and promulgates them effective October 1 of even years. The current—1957—figures for agricultural labor on the Central Plateau is $6.80—$1.2—going up to

$7.50—$1.125—July 1, 1957, daily, while that for common agricultural labor in the Pacific banana belt is $14 daily. Naturally, in the skilled and semiskilled trades they are higher, running from approximately $2 daily for semiskilled workers to $4.50 daily for skilled artisans. All these are the legal minimum rates and in many instances higher wages than the minimum are being paid.

The 1943 Labor Code, with appropriate amendments, governs in general the relations between employer and employee. It consists of 10 sections, subdivided into a total of 38 chapters and 614 articles. It is all inclusive and, at the time of its enactment was generally considered as too advanced for a small country which never before in its history had any labor legislation. Briefly, it covers labor contracts, collective contracts, working hours and wages, holidays, vacations, protection of workers, insurance and compensation, labor organizations, cooperatives, labor conflicts, special labor jurisdiction, organization and jurisdiction of labor courts, procedure for settlement of labor conflicts, public employee sanctions and responsibilities. In theory it is designed to protect labor. In practice loopholes have been found by unscrupulous employers to circumvent its provisions. Among other things the code provides for advance notice and severance pay which is quite liberal. The cumulative effects of these provisions have occasionally proved a heavy burden, especially to smaller employers.

While both employer and employee today recognize that the code is not perfect, practical experience over a dozen years since its enactment has gradually made it workable. It is still not accented in toto by the more reactionary employers.

Labor has been comparatively slow in organizing in Costa Rica, largely because the labor code regulates labor relations in such detail, and the National Wage Council regulates minimum wages, so there is little apparent incentive for organizing. Out of a total regular labor force of about 150,000 persons, it is estimated that only about 15,000 are organized.

Besides a number of unaffiliated unions, there are three labor centrals—called confederations—in Costa Rica. The most important and largest of these is the Confederacion Costarriconse de Trabaiadores Rerum Novarum—short name CCT, or Rerum Novarum—which is affiliated with the Latin American regional organization ORIT and through it with the ICFTV. It also maintains intimate fraternal contact with U.S. Labor organizations—AFL–CIO and the United Mine Workers. Originally the confederation was organized in 1943 under the auspices of the Catholic Church for the specific purpose of neutralizing the inroads which the Communists were then making in labor. Since that time, however, it has become completely independent from church influence and the name of Rerum Novarum is maintained merely for sentimental reasons.

Second in strength and importance is the Communist-controlled General Confederation of Costa Rican Workers—CGTC—which, besides a few of the old line unions in San Jose—shoemakers, printing trades, and so forth—through its affiliate federation FODA cotrols most of the organized banana workers in the Pacific banana zone. Most of these agricultural workers are not enthusiastic about organizing and only about 20 are organized. Since the Communists, as a political party, have been outlawed in Costa Rica, CGTC has been leading a rather precarious existence. Unlike Rerum Novarum, which has been making slow but steady programs, the CGTC has lost ground steadily during the past several years.

Third and least important is the National Workers Confederation—CNT—formerly affiliated with the Argentine Atlas labor group. Its importance, except in two or three unions in San Jose, is minimal.

Vocational education was started in October 1955 with a survey of the operating vocational institutions which consisted of three private vocational schools but no national vocational schools except a few small woodworking shops in high schools.

A study of 7,444 industrial workers in the central plateau area revealed 55 percent untrained, 37 percent semitrained, and only 8 percent trained, 119 had some secondary education, 20 percent of those graduating from grade school did not enter high school, and 80 percent of those entering high school did not finish.

A Department of Vocational Education was established in the Ministry of Education and at the present time two U.S. technicians, a chief vocational education adviser and a teacher trainer, are providing U.S. consultation in this department.

Two private schools, Heredia, now operating with 70 students equally divided between carpentry, bench mechanics, electrical shop, and sheet metal and welding, and Desamparados, with 130 students in 9 trades, have been converted to national schools and are being expanded with new buildings and equipment. A new school at Golfito with 80 students has just been opened. A 7-year planned program includes combination vocational—trades—and vocational agriculture schools at San Isidro del General, Liberia, Limon, Puntarenas, and Alajuela.

Fourteen teachers have been trained at the Vocational Normal School at Chosica, Peru, and are now teaching at Heredia, Desamparados, and Golfito. Twelve additional teachers have been recruited and trained here. The directors of all these schools have each had 1 year of training in the United States.

All buildings and all but a minimum of demonstration equipment have been provided by the Costa Rican Government.

Space does not permit a more detailed analysis and report, however, I recommend as a beginner in learning more about our Latin neighbors a more exhaustive reading of the political, technical, agricultural, and civic activities of this small, energetic, and respected neighbor and friend in Central America—Costa Rica.

The Sharp Edge of Soviet Foreign Aid

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks, I call to the attention of the House this very erudite and important article which was printed in the New Leader of February 22, 1960. This article, by a keen analyst of Soviet activity in this field, bears a direct relationship to my speech on the subject of mutual security.

The article follows:

AN ANALYSIS OF THE SHARP EDGE OF SOVIET FOREIGN AID

(By Leon M. Herman)

The Soviet Union has been dispensing economic aid to countries outside the Communist camp for the past 6 years. Its program is designed to enhance the position and prestige of the creditor nation. Accordingly, there is something of a public record of performance, accompanied by official comment on the record, against which the broad objectives of the Soviet Government in this sphere of action may be assessed.

At present, the number of nations to whom the Soviet Union is committed, by formal agreement, to extend economic aid, stands at 12. Five of these are in Asia (Afghanistan, India, Burma, Indonesia, Ceylon); four in the Middle East (Syria, Egypt, Yemen, Iraq); two in Africa (Guinea and Ethiopia); and one in the Western Hemisphere (Argentina).

The total amount of capital committed by Moscow, i.e., the sum of all credits due to be extended over the duration of the aid program, now measures some $2.2 billion. The distribution by country, of course, varies a good deal: Eight of the twelve countries have received a credit commitment of $100 million or more for development and other national ends. Of these, four recipients—namely, Egypt, Syria, India, and Indonesia—have each received a commitment of over $300 million. The four lesser client-nations (below $100 million) are Burma, Ceylon, Yemen, and Guinea.

It should also be noted that supplying arms plays an important part in the Soviet assistance program. Six of the twelve added nations have received military aid; over one-third of all committed funds, in fact, represent military supplies furnished on credit. Significantly, the four aided nations in the Middle East group received their arms credit ahead of their economic development credits. The two other recipients of military aid are Indonesia and Afghanistan.

One distinctive feature of the Soviet aid program is the absence of outright grants to needy nations. As a rule, Soviet assistance takes the form of a loan extended on terms that are conspicuously favorable. Typically, the recipient nation is granted a line of credit for a stated amount of rubles. This is strictly a tied loan, in the sense that the credit must be spent in the U.S.S.R. for Soviet equipment and technical services. The accounts are kept in foreign trade rubles, a nominal unit equal to one-fourth of a dollar in purchasing power at world market prices. Actual drawing against this credit usually takes place over a number of years, ranging from 4 to 8, while repayment is staggered over a larger span of time, normally beginning 1 year and ending 12 years after the arrival of the equipment.

The dramatically low rate of interest on such loans, 2.5 percent, is another distinctive feature of the Soviet credit package. This compares with a rate ranging between 3.5 to 6 percent at present on the world capital market. One more built-in attraction is that repayment can be made in the form of standard domestic export goods, at prices to be negotiated on a year-by-year basis as each loan payment falls due.

The first Soviet foreign aid commitment of $11 million came cautiously in 1954, to Afghanistan. Considerable momentum was picked up in 1955, with the undertaking to build a steel mill in India and to help modernize Egypt's armed forces. Something of a peak was reached in 1956, following the ceremonial tour of Khrushchev and the Premier Nikolai Bulganin through Asia. The next year the pace was visibly slackened; the keepers of the purse were busy mending economic fences in Eastern Europe. By 1958, however, the Soviet economic campaign outside the Communist bloc was back in full swing: New credit arrangements between U.S.S.R. and the developing nations approached the $1 billion mark. New arrangements for assistance continued in 1959 (with Iraq, Ethiopia, and Guinea), reaching a figure of some $200 million.

As officially reported, Soviet economic aid is supporting some 200 projects. A little less than half of these are industrial enterprises under construction, with the accent on heavy industry. Most important among these are: 13 mining facilities, 12 electric power stations, 11 machinery plants, 9 steel mills, 7 chemical plants, and 6 oil refineries.

Outside of the industrial group the program covers a wide variety of undertakings: irrigation projects, railroads, highways, ports, hospitals, sports palaces and research institutes.

The distribution of development projects by individual nations has been recently summarized in the September 1959 issue of Vneshnaia Torgovlia (Foreign Trade) as follows:

	Industrial enterprises	Other installations
Afghanistan	7	19
India	20	2
Burma		11
Indonesia	4	3
United Arab Republic	39	54
Ceylon	8	6
Iraq	16	9
Total	94	104

A number of unique practices set the Soviet aid program apart from the pattern of economic support followed by the West. In general, the Soviet approach shows more awareness of the psychological impact of the technique of giving. Soviet-supported projects, for example, are more oriented toward heavy industry, serving as a symbol of modernity and a promise of further, self-generated growth. As a rule, too, Soviet aid offers take the more prestigious form of loans rather than grants. The Soviet Union, furthermore, attempts to soothe the sting of indebtedness by representing the repayment process as a new opportunity for the client country to increase its exports to the Soviet market.

The differences in technique have their effect, to be sure, an effect gained largely through watching from the sidelines for several years before taking the plunge in economic assistance. But what gives the present Soviet overture toward the less developed nations the character of a campaign against the stability of the non-Communist world is the grand strategy upon which it is based. This strategy can best be perceived against the background of the Soviet theory on the nature of the class forces at work in the world today.

It is no secret that the Soviet leaders are convinced they alone understand the purpose of the historical process. What is more, they alone know by what force history will reach its ultimate goal, namely through the intensification of the class struggle on a worldwide scale and the defeat of the doomed class. In their view, only hopeless reformists can believe that the struggle between the "haves" and the "have-nots" can be resolved by the peaceful accommodation of existing individual national economic interests. They are not impressed by the sight of an expanding world economy. As the successful heirs of a revolutionary regime, the Soviet rulers are more disposed to believe in the reality of the forces that can be unleashed through the promotion of economic conflict, through the sustained fanning of hatred against a class enemy, real or imagined. The only way to resolve the class struggle, as they see it, is to explode every nation, by means of a civil war, into a better future.

According to prevailing theory, the class struggle is now ready to be turned into a global contest of strength. The capitalist system, it is reasoned, was thrown into a state of general crisis by the outbreak of the October revolution in Russia. Since then, it has been losing one position after another, largely as a result of the expanding international influence of the Soviet Union. At present, world capitalism is officially labeled as passing through the dismal phase of the disintegration of the colonial system. Thus, the time is ripe for a course of effective action designed to speed the collapse of capitalism as a world system. One Soviet authority, V. K. Fedinin, in his "The Collapse of the Colonial System of Imperialism" (Moscow, 1957), states the case as follows:

"The success of socialism in the U.S.S.R. marked a new, radical shift in the correlation of class forces on a world scale in favor of socialism, to the detriment of capitalism. The Soviet Union became a potent political and economic force * * * a weapon for solidifying the toilers of the whole world against world reaction."

Now that Soviet power has extended its base of operations from a single country to a whole system of Socialist states, the chances for influencing the outcome of the worldwide class struggle are more favorable than ever. The triumph of Communist rule over an area containing one-third of the world's population has, as the Kremlin sees it, ipso facto increased enormously the magnetc force of socialism. The growing power of the Soviet camp, as Fedinin puts it, is having the effect of "unleashing the initiative of the colonial people in the struggle against imperialism, of inspiring in them confidence in the victorious outcome of this struggle, making it more stubborn and more successful."

Above all, there must be no sliding backward. While the process of disintegration of capitalist empires is underway, Soviet policy must be aimed, in Moscow's words, at preventing the "imperialist sharks" from involving the newly emergent nations into a new web of colonial exploitation. The new nations must be taught the meaning of "real" independence by their "true" friends in the "anti-imperialist" camp. They must be taught that their full freedom from exploitation will not be secure until they break their economic ties with the West, until they "put an end to the present unequal 'division of labor,' imposed upon them by Western capitalism."

In order to qualify for the role of political bellwether, the Soviet Union must, of course, be able to demonstrate that it, too, has the technical resources to support the urge of the newly established nations to modernize there economic production. It must show that it can provide a flow of industrial equipment on favorable long-term credit, send qualified technicians to help build modern plants and facilities, and train native specialists.

Practical acts of economic assistance, however, are not an end in themselves. According to tested Soviet doctrine, popular economic action becomes purposeful only when used as a means of "awakening the political consciousness" of the people being aided. This applies, in the first place, to economic support extended by the Communist Party to the workers in its own country. Lenin saw no other reason for taking part in the economic struggle against the bourgeoisie ("the enemy class") except in order "to bring political knowledge to the workers." This is equally true in the present international setting, when the former colonial peoples must be awakened, through economic support, to the worldwide political struggle in which they are presumably involved.

There is so much "political knowledge" that the Soviet leaders must bring to the awakening people of Asia and Africa. They must first of all persuade them to recognize the "have" nations as the true enemies of their future economic progress. They must demonstrate, in particular, a number of concrete, educational propositions:

1. That the nations of the West are less interested in general economic development than in maintaining their own monopoly position as exporters of machinery to the less developed nations. This point by V. V. Rymaloy in "On Economic Aid to Underdeveloped Countries" (Moscow, 1957), is as follows: "They [the imperialists] are calling upon the less developed nations to give up for the present their plans for industrialization and at first to develop agriculture, then light industry, and only in the far future—the basic branches of production. Through this device they are counting on dooming the less developed nations to economic dependence and backwardness for many years."

2. That, at best, the West intends to help them develop only within the familiar groove of "cheese-cloth industrialization," i.e., self-sufficiency in textiles and other trivial consumer products.

3. That true industrialization can be attained only by following the stormy, power-oriented method employed by Stalin in the Soviet Union.

4. That the nations of the West are only fair-weather friends, who will one day turn their backs on them altogether. This will happen "inevitably," as a result of the present trend in capitalist technology. Because of the increasing role of synthetic materials, says the authoritative Soviet Institute of World Economics, the Western nations "cannot be counted as dependable markets for the raw materials of Asia and Africa."

As far as public discussions go, Soviet policymakers show no fear that by providing support to the onetime colonial nations, within their present political institutions, they may be strengthening capitalist forces inside these countries. Such a likelihood seems to be ruled out as unhistorical. In the opinion of the dean of Soviet experts on capitalist imperialism, Academician A. A. Arzumanyan, the excolonies cannot solve their problems of industrialization along ordinary capitalist lines. Properly managed Communist economic aid programs, therefore, must have the effect of further undermining the position of the monopolies vis-a-vis the less developed nations. In slogan form, this element in the official strategy has been expressed as follows: "Everything that injures the monopolies alters the relationship of forces in favor of socialism."

As experienced political manipulators, the Soviet rulers know, moreover, that this holy war against the monopolies must be given concrete form as often as possible. Among such targets, Soviet officialdom has found a highly convenient culprit in the form of the international oil companies. They represent a bête noire of the first order because

a campaign against them makes so few enemies and helps to fortify the Soviet pose as the undaunted fighter for justice, the "selfless, true friend of the new independent states of the East."

It is not surprising, therefore, that a major element in the Soviet foreign aid effort is concerned with fostering independence against the oil companies. In several countries (Afghanistan, India, Syria, and Egypt) the Soviet Union is now sponsoring large-scale projects for the exploration of oil and gas deposits. In India, Syria, and Egypt, Soviet technicians are engaged in building large, modern, oil refineries. The Soviet Union has also used its aid program to deliver oil tankers to Indonesia and to build gasoline storage tanks in Yemen and Afghanistan. It has also assiduously used all available forums—including the United Nations—to promote its favorite remedy in this sphere—the nationalization of the oil industry in countries seeking economic development. Even in the Western Hemisphere the Soviet Union has extended a $100 million credit to Argentina for oil equipment, and has offered a similar arrangement to the state-owned oil companies of Brazil and Mexico.

In addition, Soviet dignitaries personally carry the crusade against the oil companies wherever they go, as part of their globe-trotting campaign in behalf of "peace and friendship." During his recent visit to Mexico, for example, First Deputy Premier Anastas Mikoyan felt it his duty to dispel any illusions his Mexican hosts may have harbored about their neighbor to the north. He could think of no more fitting topic for promoting selective friendship among nations than the "sins of the oil monopolies." He came amply supplied with his own calculations. "In six Arab countries," he reported, "United States and British oil monopolies make monstrous profits—$1.3 billion a year—from oil production. This is not counting profits from refining, transport, and resale. During the past 9 years, these Arab countries lost over $6.5 billion worth of oil profits." The Arab countries may be too far away to touch the heart of the average Mexican. But a well-aimed barb against the "oil magnates" to the north should help advertise Soviet sympathy for the weaker nation.

When a Western nation extends help to a less developed country, such an act is generally understood as a token of implicit confidence in the political methods whereby the country is attempting to achieve economic health or maintain its ntaional integrity. It goes without saying that the U.S.S.R. proceeds on very much the same basic premise when it contributes to the economic growth of the countries within the Soviet bloc. But Soviet economic aid outside the bloc looks suspiciously like an act of political speculation. The aid program assumes the character of a practical base from which Soviet policy may take advantage of any future opportunities.

In the long run, however, Soviet prophecies, with respect to the newly liberated peoples may prove no more accurate than the original Communist forecasts about the destiny of Western Europe. The doctrine of the class struggle as a vehicle by which Communist parties could propel themselves to power in the West has been rendered irrelevant by the fact that gradual economic improvement, within an atmosphere of open political accommodation of group interests, has worked. Economic evolution has proven a more dependable means for raising income levels and personal well-being on a mass scale than the method of total social "overturn" favored by Moscow. The moral of this experience should not be wasted. The tools for increasing productivity are well known; they can and must be made available to the nations that are now earnestly seeking economic development. If they are given sincere and sustained assistance by the economically more advanced nations, Soviet-sponsored class warfare can in time be made equally irrelevant on the international scene.

Tribute to Gen. Walter Williams

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks, I include the address of T. W. Crigler, Jr., past commander in chief, Sons of Confederate Veterans, representing the Governor of Mississippi, at the memorial services at Houston, Tex., December 23, 1959, of Gen. Walter Williams, the last Confederate soldier:

ADDRESS OF T. W. CRIGLER, JR., REPRESENTING THE GOVERNOR OF MISSISSIPPI AT THE MEMORIAL SERVICES HELD IN HOUSTON, TEX., DECEMBER 23, 1959, OF GEN. WALTER WILLIAMS, LAST CONFEDERATE SOLDIER

Governor Daniels, distinguished guests, ladies and gentlemen, to one who was born loving the Confederacy and all that it stood for as I do, it is with inexpressible sadness that I am here today.

Over 40 years ago I attended my first Confederate veterans reunion, being on the staff of the division commander of my State. Approximately 3,000 veterans were in attendance at that reunion. Even then that was considered a pitiful remnant of those fallant gray thousands that had followed Lee and Jackson, Stuart and Johnson, Longstreet, Hood, Kirby Smith, and many other peerless leaders.

Through the years I have watched this heroic band slowly dwindle away, and today, we are assembled here to pay our sorrowing tribute to the last member of the most gallant army that ever trod the face of the earth.

Nothing that we may do or say here today will add or detract one iota from their valorous deeds on a thousand hard-fought battlefields. Their records are written in letters of fire across the pages of our country's history.

Their achievements so transcended all proportions of means and opportunities that history will never cease to marvel and to wonder at the magnitude and the splendor of their accomplishments.

Twenty million people on one side—9 million on the other; half of them slaves and consequently noncombatants; a great navy, arsenals, factories, railroads; boundless wealth in science and an open world to draw from—and on the other side, little more than a thin gray line of ragged and starving patriots with hearts of steel, devoted body and soul to their righteous cause and who were willing and determined to give their all in defense of their inalienable rights.

Those who escaped a hero's grave, on the battlefield during those 4 terrible years of constant warfare, fought to exhaustion and only gave up the unequal struggle when they had literally been beaten into the earth.

And when that pitiful remnant of a once invincible army returned to their homes—and the one we honor here today was of that number—what did they find?

Their homes, farms, businesses in ruins; their money worthless, their whole economy wrecked, and to add to their multitude of other woes, several million freed slaves were handed over to them to care for whether they liked it or not.

The Confederacy was the most thoroughly defeated nation in the annals of history. And they, in the agony of that defeat, received no assistance from anyone; least of all the victors who thrust them still further into the mire of degredation and despondency by the so-called iniquitous reconstruction, a fate in many ways much worse than a soldier's grave on the field of battle.

This act—this reconstruction of the Southern States—still remains one of the darkest blots on the history of our beloved and reunited country.

In those dark days there was nothing even faintly resembling the Marshall plan; no foreign nations rushed shiploads of food and supplies to the starving and desperate people of the South.

The returning veterans attacked their gigantic problems that confronted them with the same fierce determination with which they had stormed the Federal works at Manassas, Sharpsburg, Shiloh, and Petersburg, and a thousand other hard fought battles.

With desperate energy and enthusiasm coupled with lots and lots of hard and unremitting labor they attacked their seemingly insurmountable problems, and today—if you would see the results of the foundations so nobly laid for their descendants by the gallant defenders of our liberties so long ago, I ask you but to look about you through our beloved Southland.

It is here for all to see and marvel at. The South has made its comeback over the long, long trail, and today we are a land literally flowing with milk and honey.

The heart of every true southerner should thrill with pride at the many things that have been accomplished in such a relatively short time.

And to whom do we owe the all that we have and the all that we are in our beloved Dixie today? Who laid the foundation for our present greatness? To Walter Williams, and to those who returned with him from the holocaust of war. They were the ones who started us on the road to the heights that we have attained today.

We, their descendants, should ever strive to keep alive and green in our hearts the memory of their valorious deeds; of their grim and determined struggles to rebuild their shattered Southland for those who were to come after them, and to pass on to our children and grandchildren a like memory of the bitter struggles and heart rending sacrifices which they made for us. For the countless thousands whose unknown and unmarked graves dot the hills and valleys throughout the length and breadth of the South, and to those other thousands who lie buried near the northern prison camps where they ate out their hearts as prisoners until death mercifully set them free, we should breath a special prayer and to determine that their sacrifices for us were not made in vain.

With the passing of this, the last member of the Confederate Army, we here today are witnessing the end of a splendid and glorious era. The Old South as Walter Williams first knew it is dead and is now but a sweet and revered memory. But from the ashes and rubble left us by Grant and Sherman, Sheridan and Butler, a new and more glorious South has arisen Phoenix-like from those ashes. And we are destined, with the help of God, the brains and the good right arms that He has given us, to rise to newer and greater heights.

My allotted time has been consumed. There are many things that I might say but words are indeed futile things at a time like this.

Walter Williams' immortal soul is now in safekeeping of an allwise and all-powerful God who doeth all things well, and in that Valhalla of those mighty warriors who have

preceded him to that happy land, may he find that rest and peace that passes all undertsanding. Such is my heartfelt prayer.

God bless you all, and may He also bless and keep America, our beloved and reunited country that we all love so much, that produced men as these. Let us thank God if we have outlived their vices. Let us pray to God that we may ever emulate their virtues.

And to the bereaved family—

"May the good Lord bless and keep you,
The Lord to make His face to shine upon you, and be gracious to you,
The Lord lift up His countenance upon you and give you peace."

National Fuels Policy Held Vital in Cold War Production Race

EXTENSION OF REMARKS
OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. MOORE. Mr. Speaker, in view of the thorough study the Congress is presently making of the need for a national fuels policy as a result of the introduction of several resolutions into both Houses of the Congress, I feel the remarks of Mr. Joseph E. Moody, president of the National Coal Policy Conference, Inc., made before a meeting of the Mid-West Coal Producers Institute, Inc. in Pointe Vedra, Fla., on February 12, most and appropriate and timely.

The coal industry has a tremendous responsibility toward the economy of our country, and Mr. Moody has stressed the importance of the efficient use of all our available energy resources as a determining factor in our cold war production race with Russia. I commend his remarks to my colleagues, and under unanimous consent, include them in the Appendix of the RECORD.

THE NEW IMAGE OF COAL—PRESENTED TO THE ANNUAL MEETING MID-WEST COAL PRODUCERS INSTITUTE, INC., FEBRUARY 12, 1960, PONTE VEDRA BEACH, FLA., BY JOSEPH E. MOODY, PRESIDENT, NATIONAL COAL POLICY CONFERENCE, INC.

Your invitation to appear before the Mid-West Coal Institute, again at your annual meeting here at Ponte Vedra, is a great compliment, and one that I appreciate. But more important than that it offers me a forum to say a few things about our coal industry and our country today that I feel need to be said.

The title of my remarks, "The New Image of Coal," clearly describes just what coal and its allied industries are trying to create today. We have joined in a cooperative effort with three great objectives:

To see that the people of this Nation get a new look at coal as the source of energy for our entire civilization.

To emphasize the truth that coal has been the energy fuel which has made our great industrial development possible while other nations, lacking ample coal supplies, have plodded along in a beast-power economy.

To make it very clear that continued availability of cheap coal-powered energy is essential to American safety and her continued growth for many years to come.

In the United States we have coal in almost unlimited quantities. During the last 200 years in which it has been a commercially marketed product, we have moved from a log cabin civilization to the most powerful Nation the world has ever known.

Other nations, as I indicated above, many hundreds of years older, are still living in the log cabin and adobe huts of their ancestors. Often there has been just one major difference—accessible reserves of coal developed for use. Without coal there was no steel. Without steel there are no skyscrapers, no industry, no gas, no oil, no nuclear energy. Yet still—and often because of our own errors and neglect—coal has reached a low degree of prestige and presence in the public eye, in the minds of the administrators of our Government and in prestige and power before our Congress and our State legislatures.

In this great era of big government and economic tinkering by the Government, no industry can long prosper if it does not have a good entree in these areas. In other words, we must be socially acceptable. As a fuel in this country, we are an old industry. Two hundred years of commercial production of coal in the United States is being celebrated this year. The National Coal Association and the National Coal Policy Conference are joining hands to bring this milestone to the attention of the people of the world.

During the last year, we have changed the attitude of some of our competitive fuels from the casual yawn, complete indifference to our efforts, to that of recognition of our determination and to an almost panicky realization that this great giant of coal, slowly, carefully, but with the utmost determination has pulled together the coal industry, and related industries to help, in the severe, in fact, almost vicious competitive situation that exists today.

For the first time we know of, a great powerful industry has gathered together its full strength with those of its related forces for one purpose—to recognize the common ground of the welfare of the bituminous coal industry, regardless of the competitive relationship—hard and tought as it is.

It reminds me in many ways of Paul's letter to the Philippians, in which he reviewed the past and the changes that had happened and then said that he would leave the past behind and would go straight for his goal the Christian church. You will recall that he said that he was not critical that the Philippians had done anything wrong, but only that they hadn't done enough; that they had lacked faith in their own great force; and that in working together for the advancement of the Christian church they were entering upon the greatest unfinished business in the world; that none had arrived—they were only then being made in this process of going toward their goal.

That seems to me somehow what we in the coal industry have done. We have decided to leave many things of the past behind and to forge ahead with evangelical faith in our industry and in ourselves toward the goal of establishing the coal industry as the great servant of this great Nation, as the basis of a self-sufficient, domestic energy source, so that we in the United States can look forward to the tremendous economic growth which will surely come if it is not restrained by any lack of energy, cost of energy, or its ready availability.

Gentlemen, it is a tremendous job that we see before us, and I am glad to be able to say that we are now organized to face it. In the National Coal Policy Conference there are combined the strength and prestige of (1) railroads of this Nation; (2) the ingenious manufacturers of our mining equipment, who seem to be only on the threshold of things far greater than anything we have contemplated; (3) the United Mine Workers of America, the labor organization representing the employees of our industry; (4) major utility companies—those customers of ours who probably have the greatest stake of all in the efficient and low-cost mining of coal and who have joined with us so that a strong, healthy, vigorous coal industry will make it possible for them to produce the tremendous amounts of electrical energy that will be necessary to carry our economic growth to heights never before dreamed of, and (5) our own group of farsighted, clear-thinking coal producers. What a combination.

Alined with us in this fight is, of course, the National Coal Association now representing a broad group of the elements of the coal industry under the able new direction of my good friend, Steve Dunn. For the first time in the history of this Nation, we have true, united national leadership for the coal industry, and those industries with tremendous investments of money and manpower which are dependent on a vigorous coal industry.

Many years ago Adam Smith cynically remarked that whenever a group of businessmen sat down together it could be assumed that they were talking about prices. That may have been true in his day. But I assure you when the group of businessmen making up the aNtional Coal Policy Conference get together they are talking betterment for the whole coal industry—and talking it hard and fast.

We're doing the same kind of talking to the public these days, and I might add it is certainly time we did so. In the past I have had the unenviable experience of being something of a lone voice lashing out against the farcical waste of taxpayers' money involved in our Government's efforts to develop civilian atomic energy, even though it wasn't needed and was certain to be noncooperative with coal and other natural fuels for many years.

I was gratified to read in the Washington Post of January 30 that Mr. David E. Lilienthal, one of the great promoters of the atomic age, had now declared that the United States has been misled by promises that were absolutely impossible of fulfillment and that the whole program of nuclear power, to use his own words, has fallen flat on its face despite appropriations of close to one-half billion dollars in the last few years.

It makes my heart ache to realize that a few million dollars of that half billion, invested in research for coal, might well have given us tremendous advances in the production of power under our private utility system.

One of the great problems that is facing this Nation is its ability to grow faster, to make certain that our economy grows as fast as the families of the generation now coming up. In my generation, as in the case of most of you in this audience, the cry was that the families in the United States were shrinking, and it was officially declared that we would reach a plateau of population and gradually decline. But like the bumblebee that can't fly, the youngsters that came along didn't seem to know that, and in my own instance I find that I'm about to be the grandfather of three new grandchildren—all within a matter of a few months.

I believe it was Toynbee who said that every great civilization is faced with a challenge to which it either responds or it disappears. One of the greatest challenges that we, as a people face now and in the years ahead, is a test of our ability to maintain a competitive rate of growth. Can we do this in our society and still enhance the life and liberty and the pursuit of happiness of the individual, while elsewhere in the world those ideals are subordinated to nationalism and military might?

This is the basic factor that we are discussing. It is the basic reason for the existence of the national coal policy conference.

The major activities of the conference—oh, yes, we have done a good job of drawing attention to coal; making the public talk about coal either pro or con—but back of that we must build a solid structure that will enable coal to contribute its full share to the foundation of this economic growth. One essential to building such a firm structure of national energy is the establishment of a sound national fuels policy. It is vitally important that Congress take a good look at the crazy quilt of controls of every kind that have to do with oil, with gas, with electricity, with the importation and distribution of fuels—today a complete crazy quilt of ad hoc regulations—and evolve a program which will weld them into a sound and logical pattern. Senate Concurrent Resolution 73 asks for a study of this problem and recommendations to the Congress for solution.

We must put the best brains available on a thorough review of the present situation and must determine how our fuels can best be used for this great Nation of ours, and indirectly, for the world as a whole.

One of the questions that has to be answered is whether the defense of the United States is in good order, when a major part of our fuel could be denied us by the whim of a strong and sharply competing nation of the world, Russia.

I recently asked a very good friend of mine, who is a key man in international finance and an authority on the oil-producing Middle East areas, what he figured would be the time factor for Russia to take over one or more of these oil-producing areas if for any reason it was politically advisable for Russia to embarrass us—not necessarily as a matter of outright war or aggression, but by one of their notorious internal coups. His answer was, with rather a wry smile, "Joe, I believe they could take care of it by lunch time," and added, "There is no one, nor anything in the world, that could stop them." And so a part of the breath of life of this great economy of ours hangs on that very fine silken thread—the discretion and good nature of maybe just a single Russian commissar.

In a study such as we are backing, and the resolution asking for a study of the advisability of a national fuels policy, which has been introduced in both Houses of Congress, there naturally arises the question "Is it necessary that the continental area of the United States and its neighbors be self-sufficient in energy and fuel to maintain not only their present energy needs, but also the fuel necessary for growth?"

Our efforts to maintain a stable relationship with other fuels on the eastern seaboard, mainly with residual oil, has been attacked by the great foreign oil-producing companies. Perhaps this is only natural since they profit by millions of dollars from the dumping of imported residual oil in the United States.

It is interesting to note that in the New York Times of January 3, just one of these companies alone indicated a gross revenue in 1959 of $5½ billion. This, of course, is twice as much as the gross sales of all U.S. coal producers. The fact that we know that we are absolutely right that this Nation is dependent on a proper and stable relationship of its various fuels in all areas of the Nation gives us the strength and the force far beyond our financial resources to make our voice heard.

A study of fuels must certainly consider the question of the some $10 billion of railroad equipment, maintained and kept available in order to transport coal to the eastern part and midwestern part of the United States—the heart and soul of our industrial activity. Yet, this essential equipment is endangered by the low level of coal production in the last few years.

One of the things that has been of tremendous interest to me in the National Coal Policy Conference has been the spirit of cooperation which has made it possible for us to apply ourselves quickly, effectively, and almost within a matter of minutes when matters needing quick action arise. The ability to move and attack or confer effectively with elements of government, of the Congress, and of industry, gives to the coal industry a tremendous advantage and an impact that can only enure to our benefit over the years.

Your conference acts as a leader in policy. It acts as a complement and a supplement to the efforts of other organizations—such as National Coal Asssociation or the American Mining Congress. And we find, regardless of the effort in which we are involved, that there is always a tremendous job to do and never time enough to do it.

As a result of the effort to give a new image to coal, I am sure that everyone here has felt a lift in the last year; has heisted up his breeches a bit; stuck out his chin a little more; felt a little quiet stirring of confidence—that is the beginning.

Our job is to carry it far beyond that over the years to come, to a point of quiet recognition in all quarters that coal must be given its proper place in the economy of this Nation—that the 2 million people dependent upon the coal industry have not only rights, but demand those rights as proper recognition of the industry's importance to the welfare of the United States, of the various State governments, and, yes, of the industry of this Nation.

The other day, Walter Lippmann wrote that the critical weakness of our society is that our people do not have great purposes which they are united to achieve. The public mood, he observed, is defensive, to hold on and to conserve, not push forward and to create. The danger that is implied here certainly was once true of our industry. We have all too often been on the defensive, many times in a position of negation, but very seldom in a positive position of a forward-looking, creative "let's go" program.

Today we can positively say that the coal industry is not looking backward but is on the march forward. We have faith that our industry is a sound and necessary part of the Nation and the world as far as its energy is concerned.

There can be no question but that, if we are to continue to be a first-rate Nation, we must increase our annual gross national product more than three percent annually. It is going to take five per cent or more just to maintain our present lead, and we must remember that when Mr. Khrushchev, not too long ago, said "I will bury you," he meant that from the standpoint of production. I doubt that there is a man in this room who would not be willing to admit that if Russia does win the economic race, probably the greatest competition between Nations in the history of the world, it will not be necessary for Khrushchev to wage a hot war—the decision will have been made in the cold war.

In "Current Coal Trends" issued by NCA, dated January 1960, there is on page 5 an article indicating coal trends in the USSR. I assume that this article contains conservative estimates based on the best information available. It concludes that—I quote—"both countries' reserves (that is referring to the United States and the Soviet Union), are adequate for hundreds of years," and I quote again "by using modern methods in coal mining, Russia has caught up to and passed the United States in coal production." Some of the technological progress in Russia coal mining cited by this article include:

"1. A new way of bringing coal to the surface through a pipeline system.

"2. Hydraulic mining.

"3. A new air-cooling plant.

"4. Remote-control mining where one operator controls all coal-cutting machinery while watching the entire process on a television screen."

So today we have the new image of coal with a broad solid base made up of the coal industry and its allied industries—the railroads, the public utilities, United Mine Workers of America, and the equipment manufacturers—an image crowned with a tremendous force known as coal power. If you will allow me to be fanciful for a minute. I visualize this crown as studded with a newborn faith in our value to this Nation; with a firm conviction that we are absolutely right in having done the great technological job of modernizing our production capacity; with a real united national leadership; and with determination to meet our opposition head on with full reliance on the merits of our position.

This star-studded crown is not going to be easy for the industry to wear. It is going to take the full application of the energy and good sense of everyone in our industry and the related industries to make it effective, and it is going to take some additional faith to carry on for the length of time necessary, lest we anticipate that a program of this scope can be accomplished in the "near future." It will take time and it will take effort. But it is encumbent upon all of us to make sure that it succeeds.

I thank you, gentlemen.

Human Background of the Civil Rights Issue

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. UDALL. Mr. Speaker, Anthony Lewis, a Pulitzer Prize winning reporter in the New York Times' Washington bureau, is a brilliant interpreter of the Supreme Court and its work.

In the Times' Sunday magazine of February 14, 1960, Mr. Lewis presented a penetrating analysis of the human background of the civil rights issue. In view of the need for a sound perspective in the forthcoming civil rights debate, I recommend this article, which follows, to all Members:

HUMAN BACKGROUND OF THE CIVIL RIGHTS ISSUE

(By Anthony Lewis)

WASHINGTON.—As Congress begins a new struggle over civil rights legislation, it is time to step back and examine the great questions that underlie the political debate but are so seldom illumined by it: How far have we come in solving this country's oldest problem, its treatment of the Negro? How much farther do we have to go? What are the objectives with top priority for the Negro today? Can they be met, and if so, how?

No fair observer can doubt that racial discrimination—and that means chiefly discrimination against the Negro—has sharply decreased within the lifetime of most Americans. The dramatic nature of the change can be shown by looking back to the period just before the United States entered World War II. Those were the years treated by Gunnar Myrdal in his epochal "An American Dilemma"—a book that saw the Negro problem in realistically gloomy terms but said also that there was reason "to anticipate fundamental changes in American race re-

lations, changes * * * toward the American ideals."

Politically, the Negro was totally powerless in the South before the war. He was barred by the white primary rule of the southern Democratic parties from the only election that counted. Fewer than 100,000 Negroes in the South are estimated to have voted in the general election of 1940.

In 1940, 26 unions in the American Federation of Labor had clauses in their constitutions explicitly barring Negro members. Even in the Federal Government, with few exceptions, only menial work was open to Negroes. The Armed Forces were wholly segregated. In 17 States and the District of Columbia the law required—and in 4 it permitted—segregation in public schools. Public colleges and professional schools for Negroes, if any existed at all, were markedly inferior to white institutions in most southern States. A Negro traveling by railroad coach from New York to New Orleans had to transfer to a segregated car when he reached the South.

Twenty years later, those surface manifestations of discrimination are vastly diminished.

A 1944 Supreme Court decision struck down the white primary. Today something over 1,200,000 Negroes are registered to vote in the South. In a number of the large cities Negroes may have the balance of political power.

In today's labor federation, only one union—the Brotherhood of Locomotive Firemen and Enginemen—overtly bars Negroes from membership. Just last month the Brotherhood of Railroad Trainmen struck the color bar from its constitution.

A 1941 Executive order by Franklin Roosevelt began the breakthrough for Negroes in Government jobs, and orders by Truman and Eisenhower in 1948, 1953 and 1955 hastened the process. Negro secretaries and professional employees are commonplace in Government offices here today. Desegregation of the Armed Forces began in the Truman administration and was completed, for all practical purposes, during the Korean war.

As for school segregation, its legal basis ended with the Supreme Court decision of 1954, and Negroes have been admitted to some formerly white schools in every southern State but Mississippi, Georgia, Alabama, South Carolina, and Louisiana. The first four of those States still have no integration in higher education.

Segregation in interstate transportation was outlawed by the Supreme Court in 1946. Ten years later the Court struck down segregated seating on trolleys or buses within a single State.

It is harder to fix precise dates as landmarks in the important area of criminal law, but the overall trend is toward more equitable treatment of the Negro. In 1900, 106 Negroes were lynched in this country. One case in 1959—Charles Mack Parker—came as a cold shock to the Nation's conscience. The recent conviction of a group of white boys in Florida for raping a Negro coed was a symbol of the change.

Washington, D.C., is a remarkable story in itself. As recently as 1952 a Negro could not have lunch at a downtown drug counter, or enter any but a colored hotel or movie threater. Then in 1953 the Supreme Court found a forgotten Reconstruction ordinance barring discrimination in restaurants and hotels. Open exclusion of Negroes here ended overnight and theaters fell in line under White House pressure.

Nor is the North excluded from the striking changes of the last generation. It would have been impossible 10 years ago to walk into the office of a large New York law firm and be greeted, as the writer recently was, by a Negro secretary-receptionist.

The 1948 Supreme Court decision that racially restricted real estate covenants could not be enforced in the courts has probably had its most significant effect in the North. An NAACP official remarks that 10 years ago most of the association's New York employees lived in Harlem. Today, few do. Negroes live in New York suburbs and a few even in fashionable East Side apartments.

The difficulty with this impressionistic sketch of improvements in the life of the Negro American is that it is too rosy. A closer examination shows what everyone knows—that life remains much harder for a Negro than for a white man of the same talents.

Voting, for example. Only 25 percent of voting-age Negroes in the South are registered, compared with 60 percent of the whites. After a sharp climb from 600,000 in 1947 to 1 million in 1952, Negro registration has barely inched upward. The Civil Rights Commission report last September gave the reasons: physical and economic threats, discriminatory literacy tests, registrars who simply refuse to register Negroes. In 16 southern counties with a majority of Negro population, not a single Negro is registered to vote.

The employment situation is probably worse. Despite the egalitarian professions of the AFL–CIO and the official desegregation of its member unions, the fact is that Negroes face severe union discrimination in such large areas of the economy as the building trades and railroads. Union practices have excluded Negroes from the construction of Government buildings in Washington.

White collar and managerial jobs remain closed in the South and, to some extent, elsewhere; only 12 percent of Negro men in the country have such positions, against 40 percent of white workers. There are Negroes with college degrees working as mail clerks in the Atlanta post office. Negro women do not work as salesgirls in southern department stores, or as secretaries, or as supermarket clerks even in Negro neighborhoods. A sympathetic southern white observer explains:

" 'Do you want a Negro foreman over your daughter?' That's the next question they ask after, 'Do you want your daughter to marry one?' "

Today it is still true that Negroes are likely to be the first workers fired and the last hired. Negro earnings showed a sharper drop in the 1957–58 recession than white. According to official figures for last December, 4.5 percent of the whites and 10.8 percent of the Negroes in the labor force were unemployed.

The job problem is reflected in incomes. Between 1939 and 1958 the median wage or salary income of Negro men rose a phenomenal 477 percent, compared with a 311 percent rise for white men. But the disparity is still stark—$2,652 a year for the median Negro, $4,569 for the white. And most of the jump in Negro income came during World War II.

School segregation is hardly dead. If one looks beyond the Border States, only a few hundred Negro children are attending integrated schools in the South. The Supreme Court has declined to interfere with pupil assignment plans which assume the continuation of separate school systems and put a heavy burden on the Negro family seeking to tranfer a child to a white school.

And aside from the segregation issue, Negroes are at a marked disadvantage in schooling. It is one of the great myths—repeated by President Eisenhower among others—that the South dutifully lived up to the separate but equal interpretation of the Constitution that was in force from 1896 to 1954. Equality was in fact ignored; and despite frantic efforts to avoid integration by improving Negro schools, the gap remains. Average expenditures per pupil in the Southern States, for example, were estimated in 1939–40 as $94.41 for whites and $40.56 for Negroes. Today a rough average is $191 per white pupil, $155 per Negro.

One would have to be blind, too, to believe that Negroes have equal access to housing in the United States. The Civil Rights Commission report details the pattern which tends to hem Negroes into overcrowded, rundown city districts. The North may have more to answer for here than the South. It is, after all, a Chicago suburb whose pathological efforts to keep out a small interracial development have made recent newspaper stories.

Facilities for rest and recreation remain grossly inferior for Negroes in the South. The Supreme Court has said that public parks and libraries and beaches may not be segregated, but in fact not many are open to Negroes. A number of places have closed parks and pools under desegregation orders, and one city recently sold its zoo animals rather than let Negro and white children look at them together.

Discrimination is worse in privately owned facilities, where constitutional restrictions against discrimination ordinarily do not apply. Just across the Potomac River in Arlington County, with a population largely northern in origin, a Negro cannot enter a movie theater or a bowling alley or a skating rink; he cannot get service in a drive-in restaurant, or buy his child a pony ride.

One point that must be kept in mind in appraising the position of the Negro in the South is the vast difference between rural and urban communities.

A visit to Atlanta, for example, is an eye-opener for the northerner. There are miles of attractive, and expensive, Negro homes—some selling for $50,000 and more. There are Negro contractors, bankers, real estate men with fortunes. Atlanta desegregated its golf courses, trolleys, and libraries without incident and could do the same in its schools if the State of Georgia permitted. A Negro is an elected member of the school board.

But Atlanta is a cosmopolitan city with a cultural tradition, with a sophisticated Negro population, with an enlightened mayor and newspapers. And even in Atlanta a Negro may not ride in a "white" taxi or eat in a downtown restaurant or see the touring company of "Sunrise at Campobello" except from a segregated seat.

Yet how different is the rural South. There the Negro is backward because he is kept down—and he is kept down with the excuse that he is backward. A white citizen of Atlanta says of his rural compatriots: "Their image of the Negro is that of the yardman or the servant or the criminal, and so they can't think about the problem rationally." And in much of the South, as in Georgia, the disproportionate rural representation in legislatures helps the rural politicians remain in control.

The picture, then is one of incomplete achievement. What objective should now have top priority? Ask that question of Negro leaders, and the same answer comes back again and again: The vote, jobs, schools—all three together, because they cannot be separated.

A Negro lawyer in Atlanta remarks on how the vote can change even the way criminal law is administered—by electing prosecutors and judges. A Negro minister talks about the effort to get Negroes on the Atlanta Police Force: "We went to see the mayor and he wouldn't hear us. Eight years later we went back, and by then we had a lot more voters. Before we could say a thing the mayor asked: 'How many do you want?' We told him and Negroes went on the force."

But an NAACP lawyer argues that the vote is an empty right without the money

and leisure time to organize politically. And there is no greater enticement than the economic motive to end discrimination. Little Rock showed that race troubles scare away northern business. An Atlanta Negro, noting the growing willingness of banks to lend for Negro homebuilding, says: "Money's money. Money's money. Negroes pay interest."

Better and integrated schools are emphasized by another NAACP lawyer, a woman. "With a better education you get a better job," she says, "you vote more intelligently, you know how to fight for your rights—which is still important." Others agree that many urban Negroes who could register do not because of educational or economic backwardness.

How can these interwoven goals—the vote, jobs, schools—be reached? All those interested in the cause of Negro rights agree that the basic tool will remain the law. They depart, then, from the philosophy President Eisenhower expressed at a 1956 press conference and has repeated many times since: "I don't believe you can change the hearts of men (on the race issue) with laws or decisions."

Men's hearts do change slowly, but there is no more effective device to help them change than law. Even a hasty survey makes clear how much real difference Supreme Court decisions have made in the past 20 years. The law permits those who privately have no great desire for discrimination to end it easily—as in Washington. And the law, compelling people to act without discrimination, at least on the surface, may educate them within. "They learn that the black won't rub off," an Atlanta Negro says.

Another point on which there is broad agreement is that, in the South, advancement of Negro rights will require continued Federal prodding. One of the great southern white voices of sanity, Ralph McGill, editor of the Atlanta Constitution, puts it this way:

"There has been no progress in the South that I know of except under pressure from the Federal Government—the courts of Congress or the President."

Many Negro leaders feel it is important that Congress and the executive branch get deeper into the battle, relieving the Federal courts of some of the burden. That was the direction taken by the Civil Rights Act of 1957, in which Congress empowered the Attorney General to intervene in behalf of Negro voting.

Federal leadership could help now on the job problem, it is felt, if the Government itself hired more Negroes for better jobs in the South and advanced them without discrimination. There is hope, too, for more aggressive activity by the President's Committee on Government Contracts to end discrimination by companies with Federal contracts. Civil rights groups also urgently desire Government intervention against school segregation.

But the voting problem presents, today, the most promising area for Federal action. Action there is politically possible. No southern Senator can stand up today and say openly that Negroes should be denied the right to vote. The vote is not a fighting word, as school integration and job equality are.

The vote is the focus of the developing struggle on Capitol Hill. All the civil rights forces seem to be agreed that the emphasis in this year's legislation should be on new devices to encourage and protect Negro voting in the South.

The Civil Rights Commission shook up the whole legislative picture when it proposed, last September, that Federal registrars be appointed by the President to qualify Negroes for Federal elections when State officials will not do so.

Attorney General Rogers, seeing difficulties in the registrar plan, has put forward an alternative. He would continue to rely on the courts but would let judges appoint referees to qualify Negro voters and protect their rights at the polls in both State and Federal elections. The problem at the Capitol is to get the procivil rights forces to agree on a bill.

Bringing the vote to Negroes in rural areas is the challenge. No one thinks the task will be easy, even for the Federal Government. But the attempt itself is vital. "Agitation is a process of education," a Negro minister says.

A Negro who has practiced law in Atlanta for 48 years adds: "If the Federal Government opens the way to vote, it will be up to the Negroes to use that right. There may be violent resistance in the rural areas; the burden will be heavy. A few will have to suffer. But that is the history of the struggle for civil liberties. We Negroes don't expect to be exempt from that fact of history."

Others have said that Negroes in the South will have to be more willing to come forward and demand their rights. The feeling is that, in addition to fear and outright repression, Negro indifference is partly responsible for such a fact as the small number of Negro voters.

Can the goals be reached? The mood of those concerned with Negro rights is optimistic.

A recent authoritative book, Jack Greenberg's "Race Relations and American Law," sees these factors pushing the end of racial discrimination in the South: industrialization; urbanization, bringing with it social anonymity and security; the homogenization of the South and the rest of the Nation through television and other mass media of communication; universal training in unsegregated Armed Forces; the stand of most churches against segregation, and the Negro's growing political and economic strength.

To these should be added the fact that racial discrimination conflicts with the American ideal. What Gunnar Myrdal said in 1944 is true today: "When we say that there is a Negro problem in America, what we mean is that the Americans are worried about it. It is on their minds and on their consciences."

Window Shopping for a Crimeless Nation

EXTENSION OF REMARKS

OF

HON. DONALD F. McGINLEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. McGINLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio message given by the Reverand John Coleman, D.D., Ph. D., on the Christian Amendment Hour, which broadcast is sponsored by the Christian Amendment Movement.

Dr. John Coleman, whose record is given in Who's Who in America and who has taught political philosophy in American colleges for over a third of a century, has prepared the following radio program, which is being broadcast on some 100 stations in our country. There is a series of 13 of these programs and I understand they will be sent free on request if you write to the Christian Amendment Movement, 804 Penn Avenue, Pittsburgh 21, Pa.:

My subject is "Window-Shopping for a Crimeless Nation."

Ten years ago I talked on this subject to a number of audiences. I told them that the American people desired a land without crime but were unwilling to pay the price. They were windowshopping; they were ready to look, but not to buy, not to pay the price for a crimeless civilization.

The problem is now more pressing than it was 10 years ago. In the last 5 years the population has increased 6 percent, crime 26.7 percent. There has been an increase in the crime rate every year in the last 7. Ten years ago there was a major crime committed, one that was reported, every 20 seconds, three a minute; in 1952, there was a major crime committed every 14 seconds, more than four a minute. Ten years ago the annual cost of crime was calculated to be $13 billion; the cost in 1954 was calculated at $20 billion. That would pay off the national debt in 14 years. The figures are those of J. Edgar Hoover, head of the FBI.

Particularly is juvenile crime on the increase, increasing faster than adult crime. More than half of the arrests for burglary are of youths under 18, and of those, two-thirds are under 16. Their crime career does not stop when they are caught; in Philadelphia, for example, 47 percent of the juveniles become repeaters. They become professionals. The juvenile criminal of today will be the adult criminal of tomorrow. It is not only nice old ladies who say: "What is the world coming to?" Social workers, judges, legislators, our Congressmen, find the situation appalling.

Recently Billy Graham said that crime is as great a danger to the Nation as communism. It is a greater danger than communism, for the most part, attacks our Nation from without, crime from within. Nations do not perish through forces from without, but from decay from within. Crime is decay within.

One should not minimize the efforts of such organizations as the Boy and Girl Scouts, 4–H Clubs, Little Leagues, Big Brother associations, the YMCA and YWCA. The school authorities have done what they could. Yet juvenile crime increases, and as it increases, increases again through imitation.

The price of a crimeless nation is high. It requires self-denial as well as money, perhaps more than money. We must reduce, we must eliminate so far as possible, broken homes, slums, gambling, vice, drug addiction, and above all drink. Crime increases as these increase, and these increase as crime increases. As for liquor, we had prohibition once, constitutional prohibition, but Congress appropriated less money year by year for its enforcement, and some States appropriated no money at all. Since repeal more money has been spent in catching bootleggers who do not pay taxes than was spent when they were violating the Constitution. Now in press, radio, television, the liquor business advertises its wares, and at night neon signs of taverns confuse drivers on streets and highways. Intoxicants are sold in ball parks and on airlines. The Nation spends for them much more than for education, public and private.

The issue on this broadcast is "Crime," and no other single factor approaches liquor as a producer of crime. If the Nation is not willing to pay the price of eliminating this, and the other causes of crime, then, I say again, it is window shopping, and any lamentation over the increase in crime is close to hypocrisy.

What will make our Nation take the crime situation seriously? Vital Christianity. Vital Christianity will do two things. It will awaken the Nation to her peril as a Nation. "The wicked shall be turned into hell, and all nations that forget God" (Ps. 9:17).

Some years ago, during a discussion of this subject, a cynical student said: "All nations in the past have died; why should I worry about the death of ours?" I hope the boy has changed his mind since he has come to manhood. He also must stand one day before the judgment seat of God.

Vital Christianity will, in the second place, arouse the Nation to her great responsibility for her sons and daughters. The eternal Son of God came to earth and died for them, and we, on our part, must create for them a godly environment in which it is easy to do right and hard to do wrong. To create that environment we must deal with the problems of slums, liquor, vice, gambling, and all kindred evils, at whatever cost. These are evils that every self-respecting nation should do away with, and certainly every Christian nation. That which you do away with is the negative side: there is also a positive side.

When, after careful and nationwide deliberation, America adopts the Christian amendment, with a national acceptance of the Lord Jesus as Savior and Ruler, then our children will give to their Ruler the loyalty which the people of every nation give to a great ruler who they believe loves them, and whom they love. They will study Christ's life. His life and words will kindle their imagination; and in every way they will seek to imitate Him. It is not documents or doctrines that rule the world, but personality. The Lord Jesus is the greatest, the most dramatic, personality of all time, and in Him the Christian nation will live and move and have her being. Then will come true the words: "All nations shall call Him blessed."

This will end the secularization of our educational system. Our schools in their beginning were set up that all might read the Scriptures. At first the Bible itself was the reading book; then, when special readers began to be used, many of the selections were from the Bible; then fewer, then none. Our schools were made secular, in many States entirely so. "Secular," as the term is now used, means living and acting as though God did not exist.

For 12 years grade and high school students live in an atmosphere that is almost, or entirely, secular; modified, it is true, by the character of the teachers and by the influences of their homes, their neighborhoods, their churches, so far as they have contact with the churches; and by radio, television, movies, etc. Most of these, perhaps all but the church, are largely secular, without God. Only God's word educates the conscience. The conscience is a policeman with no salary; it is without cost, serving day and night. The conscience guides the thinking as well as the actions.

I would not quibble as to the version of the Bible that should be used; all have in them the word of God, a divine guide for living, and above all have the story of the Lord Jesus Christ.

Recently a man said that every student should have a 1-year course in the life of Abraham Lincoln, just for character education. A greater than Abraham Lincoln is found in the gospels. Abraham Lincoln himself was a great student of the Bible, often quoted from it. He said: "The Bible is the best gift which God has given to man. But for that gift we would not know right from wrong." The Bible educates the conscience.

Theodore Roosevelt said: "Almost every man who has by his life added to the sum of human achievement of which the race is proud * * * based his life upon the teachings of the Bible." The Bible educates the conscience.

And now a little longer quotation from George Washington's farewell address:

"Of all the dispositions and habits which lead to political prosperity, religion and morals are indispensable supports. * * * Let it simply be asked, where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in the courts of justice? And let us with caution indulge the supposition that morality can be maintained without religion. * * * Reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principles."

In some schools, the children begin the day by rising and saluting the flag. Recently Congress has added two significant words, "under God." Change that to "the Lord Jesus Christ"—"one Nation under the Lord Jesus Christ." The children, with the Bible in their minds and Christ most real to them, would recite:

"I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands; one Nation under the Lord Jesus Christ, indivisible, with liberty and justice for all."

For crime we pay, and pay, and pay; pay in money—billions of dollars; pay in fear—fear for our possessions, fear for our persons, the safety of ourselves, our wives, our husbands, our children—especially the children; pay in wasted lives, the lives of millions of men and women, who, in productive employment, would add to the Nation's wealth and happiness; pay in broken homes; pay in souls that are lost. For crime we pay and pay. We cannot afford to window-shop for a crimeless America, we must buy; buy salvation for America from the Lord Jesus Christ.

A Threat to Our Democracy

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. FRIEDEL. Mr. Speaker, I would like to call the attention of the Members of the House to a situation which, I believe, is a real threat to our democracy.

Within the shadows of the Capitol of the United States we are being treated to a spectacle so terribly reminiscent of the rise of Adolf Hitler and the fall of the German Republic as to bring shudders to all of us who believe in what our country and Constitution stand for. On the very streets of Washington, on almost every Saturday afternoon, handbills are being distributed that call for the erection of gas ovens to exterminate the Jews. Think of this—these people are calling for the mass murder of some 6 million fellow citizens just as did the infamous Hitler. He openly, and without shame, seeks to pit white man against colored man by open attempts at stark terror. He is endeavoring to stir up bigotry and race prejudice right here in Washington.

I am referring to a man named George Rockwell and his American Nazi Party who are openly advocating the destruction of the very fabric of our national being. There can be no other purpose than that. He who calls for such action is intent upon the destruction of our country and all that it has stood for these 185 years.

Rockwell and his people have been distributing this material openly and without any hindrance on the part of the police officials of this city. The laws of the District clearly state that it is forbidden to act "with intent to provoke a breach of the peace, or under circumstances such that a breach of the peace may be occasioned thereby," to act "in such a manner as to annoy, disturb, interfere with, obstruct, or be offensive to others." If this law has any meaning whatsoever, it means that such highly provocative, insulting, and fighting words uttered in crowded places are outlawed.

Very recently one of our fellow citizens of the Jewish faith, a Mr. Berman, who lives in nearby Virginia, was handed a copy of this handbill, and he responded in the only way that an American could who was being attacked—he attempted to wrest this scurrilous material from the hands of the man who was distributing it. It is ironic to note that this man, Berman, who did precisely what every American has done over the years—replied with force to a threat of force—was placed under charges. A more gruesome miscarriage of justice could not be imagined in the most fevered and deranged mind. Americans are being deprived of the right to defend themselves and their families from the threat of an awful death.

There have already been acts of violence; bombings have occurred in various parts of the country and other acts of lawlessness have been revealed. This Rockwell, the most contemptible of our civilization, is setting an example that can threaten our way of life. This we cannot, and should not, in any way, condone. If we do not put an immediate stop to these acts of terror, we are giving encouragement to the acts of a madman.

The right to free speech, which Rockwell claims, and in which the Washington police seem to concur, hardly goes so far as to protect acts of violence; it hardly goes so far as to protect an act designed to upset freedom of religion. The police power of the state is sufficient to protect itself. The self-serving protestations of Rockwell are not to the point.

It is our solemn duty to use every means at our command to remove this ugly blotch. To fail in that duty would be an act of disloyalty to the half million of our loved ones who gave their all just to stamp out this very thing. It is unthinkable that those of our beloved dead who fought to protect our freedoms have died so completely in vain.

I have indicated at least one approach to the problem in the local law which proscribes an incitement to violence but I believe that there may be others which are pertinent to this. Among the other local laws is one that requires certain formalities from those who solicit contributions. Rockwell has been soliciting such contributions.

The Charitable Contributions Act—and it is grim to think of Rockwell's requests coming under the head of charity—may be the very device which our police force here in Washington can use to suppress this menace.

Beyond a shadow of a doubt, Rockwell is disruptive to the peace and security of our Nation. He is doing vio-

lence to traditions of our country and wishes to overturn them by force. I would maintain that the actions of Rockwell may well be considered by the U.S. attorney in connection with the Smith Act.

The actions of Rockwell and perhaps other of his kind are a cancer on the body of our Nation. We here in Congress would be remiss in our duties if we did not take every step available to us to remove this ugly growth of bigotry and prejudice.

Strong, Decisive, and Realistic Foreign Policy

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. HOLTZMAN. Mr. Speaker, I have promised my constituents that as long as I am privileged to serve them I will press for a strong, decisive, and realistic foreign policy. On July 10, 1958, I spoke on the question of peace and disarmament and warned that it was necessary "to come forward with a constructive program of our own" if we were "to retain leadership in the world."

I rise now to protest two recent developments in our foreign policy. First, the administration's ill-advised decision to discontinue our moratorium on nuclear weapons testing, and more recently the President's suggestion that we provide nuclear weapons to our allies.

The entire issue of the spread of nuclear weapons is very serious. What purpose is served by making the techniques of total annihilation the common property of all? It would only increase the risk of nuclear war by accident. It would make the problems of control and inspection, already a formidable task, almost insuperable. It would be catastrophic if a nation in possession of nuclear weapons—supplied by this country—were to fall into irresponsible hands. The future of the world would hang in the balance. Our British allies are rightly agitated by this ominous prospect. Drew Middleton, London correspondent of the New York Times, reports that Foreign Secretary Selwyn Lloyd and Defense Minister Harold Watkinson "contend that West Germany must attain the goals set for it by NATO but that it must be denied access to nuclear weapons."

Our own scientific community is gravely concerned with the dangers inherent in a nuclear giveaway program. On February 4 the Federation of American Scientists called the prospect of such a move "the most dangerous type of shortsighted opportunism," and declared that "supplying atomic weapons to our allies will make inevitable the spread of nuclear technology throughout the world and virtually doom us to the ultimate calamity of nuclear war." And let me remind the Congress that our own hearings in July 1959 revealed that approximately 68,900,000 Americans would be killed or injured in even a relatively small nuclear war.

Moreover, the President's proposal, if enacted into law, would infinitely complicate the possibility of reaching an agreement on a test ban and would serve to accelerate the perilous armaments race. As Norman Cousins, cochairman of the National Committee for a Sane Nuclear Policy, has warned:

> With each additional nation coming into possession of nuclear arms, the danger of a runway situation increases. Once a nuclear match is lit anywhere the nuclear fires will burn everywhere. The resultant terror will produce not peace, but the worst case of jitters the human race has ever known.

Three out of four adult Americans favor a ban on atomic weapons testing. In December of last year the Gallup poll asked the following question:

> The United States and Russia have made an agreement to stop testing H-bombs until the end of the year. Would you like to have this agreement continued next year or not?

The results:

> For continuation of the ban on nuclear testing 77 percent; against continuation of the ban on nuclear testing 11 percent; no opinion 12 percent.

The Congress and the administration would do well to heed the wisdom of the American people. Creative leadership demands that we successfully conclude agreements to ban nuclear weapons testing and to halt the arms race. To do less is to fail in our duty.

The new approach at Geneva gives further hope that we may have an effective ban on world testing, and that we should go forward in this extremely vital area.

Loopholes in the Tax Laws

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an advertising brochure from Research Institute Recommendations, 589 Fifth Avenue, New York 17, N.Y.

This organization which publishes a reputable tax service for businessmen has come up with a number of ideas, all loopholes in the tax laws, including item No. 15 entitled "Putting a Youngster Through College on Tax Dollars."

The report, which costs $2 a month or $24 a year is obviously not within the reach of those who need assistance most to see to it that their children receive a college education.

Certainly it is not a device available to the youngster who must work his way through school.

It would appear that perhaps ideas like this may be the real reason for opposition by the administration to Federal aid to education. The executives and those in the upper tax bracket are very well capable of putting their children through college and school in part through use of tax dollars while the ordinary citizen must grub around to get the money to do this out of his income after taxes.

It would appear that things of this sort should receive attention from the Committee on Ways and Means, as well as the Committee on Education and Labor which is attempting to get a Federal aid to school construction bill on the floor of Congress for a vote.

RESEARCH INSTITUTE RECOMMENDATIONS,
New York, N.Y.

DEAR SIR: One year ago an institute tax expert formulated a plan whereby a man could cut his income tax sharply by using a more tax-minded method designed especially for executives.

The tax saving seemed so incredible that several score of taxpayers agreed to put the plan to a test right on their own books, provided we furnished the method without cost or obligation.

If you are not familiar with this more tax-minded method, what follows will seem almost a tax miracle. Here's what it does:

It turns income from dividends, investments, into capital gain, taxed but half. It makes club dues and spending tax-deductible. It unfreezes cash locked in a corporation, tax-free. It pays college tuition with tax dollars, to mention but 4 of the 16 miracles this method performs.

Now that the methods are proved we are printing them up in a special report which we can send you if you return the enclosed card.

Since the cover of the report is already off the presses, we enclose one. Note in particular 4 of the 16 tax savings shown, as these seem to be 4 of the most widely wanted—see the cover:

Item No. 4: Making club dues and spending tax deductible.

Item No. 5: Dividends turned into capital gain, taxed but half.

Item No. 13: How to unfreeze cash from a corporation, tax-free.

Item No. 15: Putting a youngster through college on tax dollars.

This valuable 16-part report—"The Executive's Own Tax Methods"—was worked out by the best tax brains in this country. It was built for those realistic executives who know that if they are going to offset rising prices and a shrinking dollar, it will have to be through taxes.

This special report we send you will help you do that job.

It is offered without charge, to introduce you to the regular weekly Research Institute recommendations—the leading source of business-and-tax advice in this country.

These are the weekly recommendations which over 30,000 executives found will lift part of the taxload off their backs where all else failed.

Frankly, we felt that by offering you the special 16-part report—"The Executive's Own Tax Methods"—letting you see for yourself how it switches dollars from taxes over into net income, you could then see the type of tax-saving help you can get year-round from the regular weekly recommendations.

(Though the recommendations are weekly, they cost but $2 a month, payable annually.)

But it's only fair to tell you—

The last time we made a comparable offer—giving a new and highly effective tax-reduction method with a 1-year trial of the regular weekly Research Institute recommendations at only $2 a month—the demand far outstripped our supply.

Hence, if you want a copy of this proven method, the enclosed card should be returned at once.

Very sincerely,

BARRY C. BRIAN.

[Card not printed in RECORD.]

THE EXECUTIVE'S OWN TAX METHODS

(A special report, Research Institute recommendations, New York, N.Y.)

Contents

	Item
How to eliminate tax on ordinary income	1
An extra deduction for small companies now—when they need it	2
$100,000 tax-free life insurance for executives—no medical	3
The way to make club dues and spending tax deductible	4
The key to converting dividends into a capital gain	5
Money to a widow tax free	6
How to buy tax-exempt bonds	7
A 1-man corporation can have an employee-benefit plan	8
The size of the tax deductions other taxpayers take	9
Save taxes now with gifts effective at death	10
With repairs deductible in full—improvements not—here's your key	11
Your social security may well be worth $100,000	12
How to unfreeze cash from a corporation, tax free	13
Use "family-income splitting" for a sharply lower tax	14
How to put a youngster through college on tax dollars	15
The tax deduction for an office at home	16

LAWS AND RULES FOR PUBLICATION OF GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Forand Bill Meets Medical Needs of Aged

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. HUMPHREY. Mr. President, in the February 6, 1960, ALF–CIO News, there appeared an excellent article entitled "Forand Bill Meets Medical Needs of Aged" as written by John Beidler of the AFL–CIO's legislative department.

Support, I am pleased to say, is steadily growing for some type of social security program to provide medical care to our older citizens. Last year it was my privilege to introduce a bill to provide hospitalization and nursing home benefits under our social security program to citizens who have reached the age of eligibility under our social security laws, S. 1151. I am hopeful that legislation of this type will be considered and passed by this present Congress.

I ask unanimous consent that the article by John Beidler be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORAND BILL MEETS MEDICAL NEEDS OF AGED—BENEFITS WOULD AVERT DISASTERS OF ILLNESS

(By John Beidler)

Protection of older citizens against the human and financial disaster of prolonged illness is the most pressing social welfare problem in our Nation today.

We have, in the past, reached solutions or partial solutions for many social problems in America.

We have put a floor under wages through the Fair Labor Standards Act.

We have provided a cushion for old age through the Social Security Act.

We have established a system of unemployment compensation, also through the Social Security Act.

But for older citizens, living on small incomes, who suffer lengthy illnesses, we have done almost nothing.

Eleven million persons now draw social security pensions. A little more than a million of them are also covered by private pension plans. But the primary Federal social security benefit (on which most retirees must rely exclusively) averages only $73 a month. The maximum benefit for a retired couple, which only a small proportion of beneficiaries receive, is but $180 a month.

Out of these small sums must come rent, food, clothing, and other necessary expenses. There is no margin for huge medical expenses brought on by a stay in the hospital.

It is estimated that about 40 percent of retired persons have some form of health insurance. But how good is this insurance?

A Federal Government study in 1957 indicated that of all pensioners who had medical expenses, only 14 percent of the couples and 9 percent of the single persons drew any insurance benefits at all.

This tends to prove what the AFL–CIO and other liberal groups have asserted time and again: for retired persons, health insurance costs are unconscionably high and benefits paid by these private plans are unconscionably low.

FREQUENT CANCELLATIONS

Another fault of existing private plans is that in many cases as soon as the insured retiree draws some benefit from his insurance policy, the company cancels.

What happens to these people, and to those who have no health insurance coverage at all, when major illness strikes?

Savings, which have been painstakingly accumulated over the years to be used for some modest comforts during retirement, are lost.

If all funds are gone, the retired person may, by proving his poverty, obtain public assistance.

A final alternative, for many, is to seek the help of children or other relatives who are still employed. Unquestionably millions of these problems are solved in this way.

But none of these alternatives is a really acceptable solution to the problem. The only acceptable solution is a system to which each worker contributes, and from which he draws benefits as a matter of right with the cost distributed over his lifetime rather than depending on private insurance bought a few years before retirement.

Such a system is proposed in the Forand bill.

The Forand bill, named after its chief sponsor, Representative AIME J. FORAND, Democrat, of Rhode Island, provides for extension of the social security system to provide hospital and skilled nursing home care and certain surgical expenses for all social security beneficiaries.

This means, in addition to retired persons, those covered would include widows with dependent children and persons who draw benefits because of total disability.

Under the Forand bill the Secretary of Health, Education, and Welfare would administer the plan, as he does the existing social security system. Social security records would be used to determine the eligibility of individuals for benefits.

PARTICIPATION OPEN

Any qualified hospital or skilled nursing home could participate in the program. Rates for services rendered to the eligible sick would be set by agreement between the Government and the hospital or nursing home, using the kind of formulas already well developed in many Government and private plans.

The Secretary would be authorized to use voluntary organizations to help administer the program. A special proviso forbids any administering agency to interfere with the internal management of participating institutions or with the private practice of medicine.

The cost of the program would be about $1 billion a year at the start. This would be met by an increase of one-fourth of 1 percent in the social security taxes on employers and employees, and three-eights of 1 percent on self-employed persons. The tax would apply, as it does now, to earnings up to $4,800 a year, so that a worker would, at most, pay $12 more each year in social security taxes.

The Forand bill was first introduced in 1957, but failed to receive any positive consideration by the 85th Congress.

The bill, however, was reintroduced in the 86th Congress, and extensive hearings were held by the House Ways and Means Committee in July 1959. A large number of witnesses appeared before the committee.

Opposing the bill were:

American Medical Association.
American Dental Association.
American Pharmaceutical Association.
Chamber of Commerce of the United States.
National Association of Manufacturers.
American Farm Bureau Federation.
Council of State Chambers of Commerce.
Life Insurance Association of America.
National Association of Life Underwriters.
International Association of Accident and Health Underwriters.

Most of these groups also opposed the original Social Security Act.

Those who appeared to support enactment of the Forand bill included:

AFL–CIO.
American Nurses' Association.
National Association of Social Workers.
American Public Welfare Association.
National Consumers League.
National Farmers Union.
Group Health Association of America.
Council of Golden Ring Clubs of Senior Citizens.

A number of prominent physicians also supported the bill.

Dr. James P. Dixon, Jr., former health commissioner in Philadelphia, said the use of the OASI machinery would "minimize papuerism" and would "tend to keep down the ever-increasing cost of health care under public assistance and State hospital aid programs."

The medical directors of four health centers affiliated with the Clothing Workers, serving 110,000 members and their spouses, strongly recommended passage of the Forand bill. They included Dr. Morris Brand, Dr. William S. Hoffman, Dr. Joseph A. Langbord, and Dr. Julius Schwimmer.

In their testimony they declared:

"We know of no adequate remedy for the gap in our medical coverage except an equitable system of national coverage, paid for by the worker during his years of peak earning power.

"In spite of the American Medical Association's official attitude, many physicians like ourselves support the principles of the Forand bill and want it passed."

Dr. Frank F. Furstenberg, medical director of Sinai Hospital outpatient department in New York, said "it does not seem fair" that the aged "should have to be pauperized in order to get medical care," and added that Forand bill passage would make this care available as a matter of right.

The committee took no decisive action on the Forand bill after its hearings. Since the proposal is a tax measure, the Constitution requires that the bill originate in the House. Therefore, proponents of the Forand bill must secure favorable action by the House Ways and Means Committee.

The committee is expected to vote on the bill some time in March. The AFL–CIO has urged all those interested in its passage to request a favorable report by the House Ways and Means Committee.

At its San Francisco convention, the AFL–CIO unanimously approved a resolution which said, in part:

"We urge the House of Representatives to move swiftly to add Federal health benefits for OASDI (old-age and survivors and dis-

ability insurance) beneficiaries so that the Senate likewise will have time to approve this essential program in 1960. The Forand bill, H.R. 4700, provides a constructive basis through which the OASDI trust funds and contributions can be used to pay the costs of hospitalization and related types of health care for the aged and other beneficiaries.

"Through encouraging prompt preventive treatment, good quality of care, and speedy rehabilitation, a new program along these lines can remove one of the most serious causes of insecurity and suffering among our aged citizens and, at the same time, encourage constructive developments in health care."

None of those who oppose enactment of the Forand bill have come to grip with the unanswerable reality that is the core of the problem—the lack of medical protection for the aged is undermining our national goal of dignified, independent, earned retirement.

The way to provide this protection is through the retirement system itself.

Prospects for passage of the Forand bill during the present session of the Congress are complicated by the probability that the session will be a short one so that Members may be free to attend the national political conventions.

This leaves only 5 months for action.

The need for the Forand bill is clear and urgent. Whether you are retired or near retirement, whether you have aging parents whose happiness is your concern; or whether you simply recognize the social and economic importance of this problem, you can and should help to meet the need.

Write to your Congressman and Senators, urging them to support and work for the passage of H.R. 4700, the Forand bill.

The Worst Risk

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, in Rio de Janeiro the other day the President indicated that the United States "stands ready to devote substantial portions of the savings made possible by disarmament to vast constructive programs of peaceful development." This may be waiting too long to take the risks of peace. A column by Roscoe Drummond in the Washington Post Monday, February 22, 1960, outlines the alternative risks we face with remarkable clarity:

THE WORST RISK—DO WE DO ENOUGH TO WIN PEACE?

(By Roscoe Drummond)

When we come to talk about who's taking risks with the Nation's safety, we ought to be sure we don't end up criticizing the wrong people.

Are the dangerous, heedless risk-takers the President, the Secretary of Defense, and other officials of the administration who are being upbraided by the Democratic leadership for not being willing to spend more than $41 billion a year to prevent war?

Or does this serious charge really belong on the heads, of others—those Democrats, who readily condemn the President for not spending enough on the military side of our foreign policy, and those Republicans who, together, set out each year to undercut the economic side of our foreign policy.

What is the paramount danger which faces the United States today? Is it the missile gap or our inferiority in outer space?

Does the paramount risk come from our not doing enough to win the peace?

Does it come from doing too little to win the economic contest through which Khrushchev has vowed he will "bury us"?

It is foolish to pretend that there will not be some risks even if we do everything in all directions at once. There would still be risks. Take, for example, the President's decision not to put the Strategic Air Command on a continuous air alert with bombers in the sky all the time. This is a calculated risk. It is based in part on the intelligence that there is no evidence that the Soviets are preparing to launch an attack. It might be better to put SAC on an air alert; it might be better to put more money faster into ICBM's. The President deems these risks prudent to take.

But the Democrats who are most vociferous in attacking the administration for taking any risks at all, and those Republicans who are prepared to join in trying to hack up the program to help the underdeveloped nations win the battle over abject poverty without resorting to communism—these people are taking the most perilous risk of all.

What is the intelligence on which this judgment is based? It is:

That the Soviet Union has no desire and shows no sign of wishing to jeopardize everything it has by engaging in a nuclear holocaust.

That the Khrushchev regime is convinced that the most effective means of spreading communism is to expand its own economic aid program abroad and to show such spectacular industrial and scientific achievements at home that the case for communism will, as Mr. K. sees it, be compulsive.

That the Soviets are mounting a formidable economic offensive.

I am not arguing that we should let down our guard militarily. I am not arguing that we should not be putting somewhat more into defense and into outer space. What I am suggesting is that if we have to choose between strengthening our capacity to deter nuclear war and our capacity to win the peace, the far greater risk today is to do too little too slowly in helping the newly independent poorer nations to develop their economic sinews.

This year the President is asking Congress to put $4.1 billion into military and economic aid. Already there are those who are reaching for their hatchets and knives. Obviously there can be honest disagreement over whether this is exactly the right figure, but from those who want to spend less instead of more to win the economic contest for keeps to which Khrushchev challenges us, let us hear no more about gambling with the safety of the United States. They are inviting us to take the worst risk of all—the awful risk of not doing enough to win the peace.

Voice of Democracy

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Friday, February 26, 1960

Mr. LONG of Hawaii. Mr. President, Leonard Andaya, a senior at Maui High School, has been selected as the winner of the Voice of Democracy contest in the State of Hawaii. Young Andaya is the son of Mr. and Mrs. Alejo Andaya, 80 Kane Street, Kahului, Maui. I ask unanimous consent that Andaya's inspiring speech, which won first place in Hawaii, be printed in the Appendix of of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Leonard Ardaya)

Hawaii, the 50th State, bids Washington, Michigan, Florida, Maine, and all other sister States a fond aloha. When Hawaii finally became part of the grand Union, people thought that the only thing she could contribute was her beauty. This isn't entirely wrong. There is a beauty in Hawaii which pulsates in the heart of every true American and which moved me to speak so praisingly for it.

This is my story, a story of democracy. This is democracy as I saw it functioning in the everyday things that are usually neglected in the telling of something important such as democracy.

My story has neither an outstanding event nor a patriotic happening as a central theme for the constructing of a beautiful picture of democracy. However, beauty appears in many forms. I see the beauty of democracy in the simple things I do from day to day. For example this past week. On Monday I met with my class counselor to discuss the opportunities in the U.S. Diplomatic Corps, the colleges which offer the best preparation for this type of work, and similar questions. My counselor offered suggestions, but I made the final decisions. It was my privilege to choose the college I would most like to attend, and the course of study I would most want to follow. Here, the beauty of democracy is expressed in the idea of being able to use one's own mind and to use it well.

On Tuesday we had our regular student council meeting. Representatives of the student body met to discuss problems and to formulate good policies. These meetings are primarily intended to teach us how to deal with problems and handle responsibilities. Here, a person is encouraged to think and express his ideas and opinions, for the more a person thinks, the better will he be equipped to cope with the problems of our society. Apparent at this meeting were several rights that we enjoy: the right to gather and to discuss problems, and the right of each person to say what he wants to say. This is another interesting beauty of democracy.

On Wednesday I attended a meeting of the Pacific and Asian Affairs Council. In this groups, we discuss our foreign policy and compare the advantages and disadvantages of different political systems. In trying to find solutions to problems facing our Nation today, sometimes our ideas are considered seriously by those who formulate our foreign policy. Here again democracy appears in our everyday affairs. We have the right to question the policies of the government and to know what's happening behind the scenes. But most important of all, we have the privilege of suggesting improvements in policies made.

Thursday, Friday, and Saturday were pretty uneventful last week. Those days I caught up with the latest happenings on the world scene and read the differing comments on the editorial pages of the two daily newspapers. I enjoy the editorial pages very much mainly because I know that the comments were not censored and actually do reflect the thinking of the writer. Our newspapers print the news that they feel would interest the public. They aren't restricted and subject to constant censorship * * * and so speaks democracy.

Democracy is prevalent everywhere, and the acme of democracy, without doubt, is the religious life of the people. Everyday, but

especially on Sunday, I find time to praise and thank this Supreme Being for the many blessings and freedoms I now have. Every Sunday my doubts on the future of our democractic Nation are dispelled because of the way I've seen people put their trust in God. This is the most beautiful part of democracy.

This, then, is my story of democracy. I've seen its beauty through simple, ordinary happening; I've felt its effect on my daily life. Believe me, democracy is beautiful and we, the people of Hawaii, are proud to contribute to this beauty as a showcase for America.

The Questionable Procedure

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Wall Street Journal of this morning.

I condemn the action taken in the use of the lie detector to ascertain whether or not an employee of the Internal Revenue Department had given information to a U.S. Senator.

I am glad assurance has been given by the Internal Revenue Service that such action will not be taken hereafter but should this occur again strong action should be taken by the Congress to prevent such a procedure.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Feb. 26, 1960]

THE QUESTIONABLE PROCEDURE

Delaware's Senator WILLIAMS is a quiet man who speaks out publicly so seldom that when he does his colleagues sit up straight and listen.

So it was a few years ago when the Senator's quiet way of exposing graft and corruption shook up the whole Internal Revenue Bureau during the Truman administration, and touched not only the Justice Department's Tax Division but the White House staff itself.

Now Mr. WILLIAMS has spoken up again. This time he reveals that the Internal Revenue Service has been forcing its people to submit to lie detector tests in an effort to learn who gave the Senator information.

This happened, the Senator says not under the Truman administration but 2 years or so ago under the Eisenhower administration. He learned about it when one IRS employee refused to take the test on the ground that it was a degrading procedure. The man was fired, and the Senator says that though the man's record shows he was ousted for insubordination there isn't much question why he was forced out.

One irony in this case is that the man who was fired had never given the Senator any information whatsoever. But a greater irony is that the IRS was not employing a highly questionable procedure in an effort to uncover wrongdoing in the service; it was trying to prevent the Senator from uncovering wrongdoing by terrorizing its own employees.

It is true that when higher-ups in the Treasury Department learned what was going on, they immediately put a stop to the lie detector procedure.

But that, it seems to us, is only a first necessary step. The next one clearly indicated is a full-dress investigation into why somebody in the tax collecting service thought it so important to prevent its employees from disclosing information to a U.S. Senator.

Atlantic Community Background

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. WILEY. Mr. President, in the light of the Communist economic challenge on the global front, the necessity of an effective policy for strengthening the national economies of the non-Communist world, becomes an increasingly important factor in our policymaking and planning.

Economically, a closer integration of free-world economies—on a mutually-beneficial basis—will help to present a stronger bulwark against the penetrative efforts of Communists to infiltrate through the trade routes.

Today, the nations of the North Atlantic Community represent a substantial output of the world.

We recognize, however, that adapting policies to create closer economic unity carries with it difficult, complex problems. Each nation has the task of protecting its domestic industries while, at the same time, attempting to cooperate as fully as possible with other countries in expanding trade—the economic lifeblood of the free world.

Recently, the Economic World published an informative article entitled "Atlantic Community Background," outlining the progress among non-Communist nations toward greater cooperation.

Containing also background information on general economic development in the Atlantic Community, I ask unanimous consent to have the article printed in the Appendix of tahe RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Economic World, February 1960]

ATLANTIC COMMUNITY BACKGROUND

MARSHALL PLAN SEEN AT ROOT OF NEW MOVES

The new move to coordinate economic policies in the North Atlantic community is the latest chapter in a story that goes back to the days of the Marshall plan. It is the story of more than a decade of steady growth in economic cooperation and integration.

Following is a brief chronology of the establishment of new institutions to deal with the new economics of the postwar world.

Nineteen hundred and forty-eight

The Organiation for European Economic Cooperation was established to plan the allocation and use of Marshall plan funds on the basis of joint analysis by all member countries of the needs of each individual country. Original membership was 16 nations—since expanded to 18 with the admission of the Federal Republic of Germany and of Spain. The United States and Canada are informal, nonvoting members.

Benelux was established to bring about a customs union of Belgium, the Netherlands, and Luxembourg.

Nineteen hundred and fifty

The European Payments Union was established under OEEC to settle multilateral trade balances among member nations to obviate the need for separate balancing of accounts between each pair of countries. This has since been replaced by the European Monetary Agreement.

Nineteen hundred and fifty-one

The European Coal and Steel Community was established to pool the coal, steel, iron ore, and scrap resources of France, Germany, Italy, Belgium, Holland, and Luxembourg to serve a single market without restrictive barriers. It was the first step toward the integration of the economies of the "Six."

Nineteen hundred and fifty-three

The European Productivity Agency was established within the framework of OEEC to conduct research, prepare studies, and serve as a clearinghouse to stimulate increases in output-per-man-hour in European industry and agriculture.

Nineteen hundred and fifty-nine

The European Atomic Energy Community was established by the Six for the common development of their atomic energy resources.

The European Economic Community came into being to develop a Common Market without tariff or quota restrictions; to develop common agricultural and transport policies; to provide for free interchange of capital, labor, and services; and to harmonize wage rates, social welfare benefits, and fiscal and monetary policies. Subordinate institutions are the European Social Fund to compensate for economic injuries caused by the integration of the six national economies; the European Investment Bank to make development loans within the Community; and the Development Fund for oversea countries and territories to provide supplemental grants for economic growth in the overseas territories. The Community is governed by a commission, an assembly which soon will be elected by popular vote, and a seven-man European court.

Nineteen hundred and fifty-nine

The European Free Trade Association—the so-called Outer Seven—was established to eliminate tariff and quota restrictions among its members on the same schedule as the Common Market, but without establishing a common external tariff structure and without the other steps toward economic integration which characterize the aims of the six.

AREA'S OUTPUT BIG PART OF WORLD'S TOTAL

The 20 nations of the North Atlantic Community represent the overwhelming bulk of the industrially developed countries of the non-Communist world.

The United States, of course, has the greatest concentration of industry in the world; and the six nations of the rapidly integrating European Economic Community have the second greatest industrial complex producing for a market almost as large as the United States and larger when the oversea members of the Common Market area are included.

When the other Western European nations are added in with the United States and Canada, the economies of the North Atlantic Community between them are producing goods and services at a rate of over $700 billion annually. Together they account for some 70 percent of the steel production of the entire world.

In recent years, the OEEC countries—Western Europe plus the United Kingdom—have been growing economically at an annual rate of between 4 and 5 percent. In the 5 years between 1953 and 1958, industrial output increased by about one-third.

During the same period, national income in Canada expanded by 13 percent—at an annual rate of about 2 percent. Comparative growth in the United States was 7 percent—an annual rate of between 1 and 2 percent.

If the nations of the North Atlantic Community succeed in coordinating their foreign trade policies, their decisions will apply to some three-quarters of the international commerce of the non-Communist world. Based on imports, the OEEC nations together conduct nearly 45 percent of the free world's foreign trade.

The combined population of the North Atlantic area is over half a billion people—less than 30 percent of the population of the non-Communist world, but by far the world's greatest pool of skilled labor.

If Japan is added to the proposed new grouping, this will bring in the industrial, trade, and manpower resources of the only advanced industrial economy of the Far East.

Apart from the activities of the Communist bloc, almost all of the economic and technical assistance which has been flowing to the low-income areas has been provided by the North Atlantic Community.

According to the U.N. and other sources, 11 of the 18 members of the OEEC furnished economic assistance to the low-income world in 1957-58. Their combined disbursements of grants and loans during that year totaled just over $1 billion. At the same time, the United States was making economic assistance expenditures, including defense support, of $1.7 billion and Canada's aid expenditures were about $61 million—making a combined flow of aid for economic growth in the less developed areas of over $2.8 billion.

ROLE OF THE WISE MEN

Special teams of wise men—named to work out specific but thorny international problems—have played an important role at several points in the evolution of Atlantic cooperation since the end of World War II.

Proponents of the wise-men device say it has two principal advantages over traditional international negotiations.

The first derives from the fact that while the wise men are respected nations of the principal negotiating countries, they do not represent governments in their wise men capacities; and therefore are not restricted by official government positions and do not have to defer to the formal machinery of governments on each point of agreement or disagreement.

The second asset claimed for the wise men technique is that members of the small teams are technically qualified to deal with the broad subject at hand but are not required to cope with the fine points that tend to obstruct agreement in normal negotiations between experts of several nations.

The main idea is that the wise men—thus unencumbered—can consult government leaders and technical specialists but use independent judgment in putting their prestige behind an agreement on general principles.

Two teams of wise men currently are at work. The first—appointed by the special economic conference in Paris last month—is preparing recommendations for a new and broader organization to replace the OEEC and provide a forum for the coordination of North Atlantic policy on trade and aid to the less developed world. Members are Randolph Burgess, U.S. Ambassador to NATO; Sir Paul Gore-Booth, Permanent Under Secretary of the British Foreign Office, Bernard Clappier, of the French Minister of Finance; and Xenophon Zolotas, Governor of the Bank of Greece. Their recommendations are to be made to the second session of the special economic conference scheduled to meet in April.

The other team of wise men—appointed by the World Bank—leaves this month for several weeks in India and Pakistan to study the possibility of an international approach to India's need for foreign exchange to finance needed imports during the third 5-year plan now in the final process of formulation, and to help launch Pakistan on the road to rapid economic growth. Members are Allen Sproule, former president of the New York Federal Reserve Bank; Sir Oliver Franks, chairman of Lloyd's Bank of London; and Herman Abs, head of the Deutsche Bank.

Last use of the wise men technique was to study the energy resources and needs of the European community and recommend a program of atomic energy development for Euratom.

Action Needed in Most Dangerous Period in World History

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the congressional concern for peace has been effectively reported by Frederick Burdick, editor of Gist, who writes a report for Congressmen in his recent editorial report—volume 18, No. 4—which said in part:

ACTION NEEDED IN MOST DANGEROUS PERIOD IN WORLD HISTORY

(By Frederick Burdick)

Exhaustive research and analysis of negotiations during the past 14 years for attaining agreement on disarmament progress discloses that the major causes of deadlock have been suspicions, fears, and military rivalries.

The world has been surfeited with floods of peace talk but has witnessed a dearth of peace action. Literally millions of words have been spoken since the end of World War II in legislative halls, around conference tables, and over airways about the blessings and desirability of peace.

However, no major, actual, substantial steps have been taken in the direction of armaments control except hesitant, precarious, uncertain cessation of atomic bomb tests.

Objectively analyzed, the spirit of catching up and other delaying tactics are exceedingly dangerous, unrealistic, ephemeral and evidences of wishful thinking. Instead of time being on our side some authorities admit that the opposite is the case. It is wise to face facts.

Also, the idea of arming former enemy nations with nuclear weapons is extremely dangerous in the light of historical facts. One has but to reflect just a moment about Pearl Harbor and the sudden attacks on Poland, Belgium, and France at the start of World War II, and witness what is happening in other parts of the world to realize how unsafe it is to think that just handing a man a gun guarantees that he will not use it later against the giver.

Who knows which countries could be certain to stand by us in a future war? The very uncertainty of conditions in various nations constitutes one of the most vital and pressing reasons why we should prepare for and advance toward world peace. There also is the danger of war by accident or incident, and by false reports, requiring effective, scientific, objective inspection systems. Day after day, week after week, month after month, year after year and decade after decade the nightmare of war fears have permeated the minds of people. For the sake of ending mental cruelty the cold war inflicts upon millions of mothers throughout the world in particular, an end should be made to war preparations as soon as possible and sincere, persistent efforts made to hasten the dawn of world peace.

Albert Einstein warned years ago that a modern war might poison the earth's atmosphere to the extent that all breathing things would perish. Realistic reasoning and logic warn that the only foresighted and rational course to pursue which will be justified by historians and future generations is to cease procrastination, end the arms race and go to the aid of the millions of men, women and children in many lands who are on the point of starvation, and lack even the rudiments of human comforts.

This world can be transformed into a virtual paradise by actually turning away from the dark, fearsome, threatening, haunting, dangerous highway which could lead to nuclear annihilation for the human race and turn instead onto the road which leads to world peace, progress and prosperity for people everywhere.

Instead of chancing use of pushbuttons which could leave the world in ruins, policymakers should push buttons which will put the peace-preserving machinery of the U.N. into action

The first move should be turn over to the United Nations, as is favored by a majority of American lawmakers, the task of ending the arms race, establishing an effective inspection system and then proceeding, step by step, toward the golden age of peace on earth.

Congressmen returning from their contacts with the people say they are more concerned about the arms race and real progress toward peace than any other issue. It well may prove a vital one in the approaching election campaign.

Turning Point in History?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. HUMPHREY. Mr. President, I believe a new element of hope has entered the Geneva negotiations on a nuclear test ban. The Russians have declared they will permit international inspectors to investigate a limited number of underground disturbances which cannot be identified with present seismographic devices. This may be a cynical tactic or a propaganda play, but it may be more. We cannot afford to leave a radioactive stone unturned in our quest for genuine arms control with reasonable safeguards.

The Washington Post, and other influential newspapers, have warned us not to let extravagant preoccupation with the remote possibilities of evasion stand in the way of chances for compromise on a system which, if not perfect, would be reasonably satisfactory.

I have constantly maintained that there is no such thing as a perfect inspection system. What we need are reasonable safeguards, safeguards which will disclose any serious cheating. In international affairs, just as in domestic society, inspection is a substitute for trust.

Prof. Hans J. Morgenthau in a letter to the Washington Post, February 23, 1960, says the new Russian concession at Geneva may be a radical change from their former stand, motivated by a new recognition of the horror of nuclear weapons and their desire to survive. I ask unanimous consent that the remarkable letter of this distinguished student of world politics be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

The Soviet Union has just made another concession in the Geneva negotiations on the cessation of atomic tests. It has declared its willingness to allow international inspection of a limited number of underground disturbances whose nature cannot be identified with the presently available seismographic equipment.

This concession follows a number of others concerning international inspection and control on Russian territory, which together constitute a radical departure from past Soviet attitudes. Speculation is of course rife about the reasons why the Russians are taking this unprecedented attitude, which has been explained primarily in terms of propagandistic and military tactics.

I have been myself consistently suspicious of Soviet intentions and have raised my pen against the spirit of Geneva of 1955 and the spirit of Camp David of 1959 as soon as they transpired. I have but recently in a series of articles advanced the proposition that Khrushchev is more dangerous an antagonist and more difficult to negotiate with than was Stalin. But I have always credited the leaders of the Soviet Union with a sense of reality.

A realistic evaluation of the world scene has convinced me since 1955 that if the nuclear armaments race cannot be brought under control before any number of nations will have nuclear weapons, only a miracle will save mankind. The controlled cessation of atomic tests is a first small step in the direction of the control of the atomic armaments race itself.

If the United States and the Soviet Union cannot agree on this, they will not be able to agree on anything else in this field. We are standing therefore at a turning point in the history of the world. If we fail here we have in all likelihood sealed our and mankind's doom, and the only issue remaining to be settled will be how and when we shall be doomed.

Is it farfetched to assume that the Russian leaders are aware of what most knowledgeable observers outside the Soviet Union know, and that they have radically changed their position with regard to international control and inspection on their territory because they want to survive?

This explanation, I admit, is simple and lacks in that elaborate and improbable sophistication with which some Soviet experts like to make things complicated and hence, unmanageable. But it may well be worthy of some consideration by that unfortunate interdepartmental committee which, for lack of guidance from above, must hammer out as best it can our policy on this momentous issue.

WASHINGTON. HANS J. MORGENTHAU.

Sudden Awakening?

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith a column written by Jerry Gabriel in a recent issue of the New Era, Reading, Pa.

SUDDEN AWAKENING?

(By Jerry Gabriel)

The Saturday Evening Post (Feb. 6, 1960) with its usual aplomb and dignity (?) editorializes this week on the following: "Why Must Business Leaders in Politics Be so Neutral?" I don't always read the Post editorials, but this heading intrigued me. First, the thought crossed my mind that somebody must be kidding. Since when have business leaders in politics been neutral? I decided to absorb this revelation.

The writer, Charles W. White, points out that he "is one who has been active in typical big-city campaigns in Indiana," which qualifies him (I suppose) as somewhat of an oracle in these matters. At least the Post must think so.

Anyway, he begins by alluding to last year as being one in which the businessman in politics movement fell flat on its face even though it had a most exuberant start. Then he states that the Republican Party "took a shellacking in Indiana as it did in most States."

Now this is significant to me because in his second paragraph he has already contradicted the heading on the editorial. Does he mean that business leaders are "neutral" Republicans? I guess so.

Then he gets to the core of the issue. He quotes a publicity release from a "corporate statesman" (wow) which says in effect that folks should not get the impression that businessmen are out to clobber labor at the polls—all they want is for all groups to be fairly represented. Mr. White then proceeds to point out what he calls the truth, "corporate enterprise does have a legitimate ax to grind concerning labor political domination." Then he proceeds to spank Cope for fighting corporations, for endorsing Democratic candidates, for contributing to their campaign funds and for supplying cars and workers at the polls.

Then he says, "if business fellows were frank about what they stand for and why, they could persuade many workingmen and women to come along." In other words it ain't nice for us to do it but it is OK if they do it. Holy mackerel, I'm crying.

The balance of Mr. White's opus is devoted to eulogizing the political action efforts of General Electric, Republic Steel, Gulf Oil, and the Ford Motor Co.

Here is the "payola" statement. After pointing out the merits of the above mentioned firms in their approach, brother White says, "[this] is a far more sensible approach than stirring up junior executives about politics and patriotism, and then failing to suggest which side their bread is buttered on." In other words, be neutral as heck, but buddy, if you like your job in this outfit you better pull the right lever at the polling place.

Now, friends, with this pitch in mind, I ask you, if all these "businessmen" were put in a paper bag, shook up, then turned upside down, how many "politically neutral" fellows do you think would drop out of the bag? Right. You're absolutely right, and don't forget it when election time rolls around.

National Brainwash

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, February 26, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a column by Samuel B. Gach, publisher of the California Jewish Voice, entitled "National Brainwash," dealing with the issue of our Nation's defenses, be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the California Jewish Voice, Feb. 12, 1960]

NATIONAL BRAINWASH

(By Samuel B. Gach)

Fantastic is as close an adjective with which, in this historical daze, I can come up with to describe America's present dilemma. Admittedly, the Madison Avenue, soap hucksters did a bangup job in 1952, when the domestic tories commissioned the gray flannel boys to create consumer's acceptance for the product Eisenhower.

So good a job was it that the quiz boys reflexed the minds of simple, naive America to the extent that when the name Eisenhower was read or heard a father image was instantaneously conjured up, with the conviction tagged on that Ike was the omnipotent who knew all and could do no wrong.

This writer most certainly bears the hucksters no grudge, because all they did was, in the strictest sense, a job for which an advertising agency is in business * * * to create a desire in the minds of the public to buy the client's product. The question of veracity, value, idealism has no place in the planning of a national selling campaign when a product is being discussed in the inner sanctum of an ad agency. To some extent they can be excused.

It is an entirely different matter, however, when year after year we are treated to the outrageous spectacle of the degeneracy of most of the national daily press and the slick stock weekly magazines. Not only have they perpetuated the Madison Avenue hoax about the father image, and thrown objectivity into the wastebasket, but they went one step further: In covering for Ike these past 8 years they led the public to believe that with the advent of Eisenhower the infallible, we actually have been privileged to witness the "second coming."

Lack of space prohibits taking apart item by item the mendacious apologia with which the above mentioned purveyors of news and comment hid from public view the fact that Eisenhower was not only a very ordinary man, not overly endowed with brilliance, but rather an easy going, vacation loving, nonreading, ill-informed, and very mediocre Chief Executive.

We shall therefore discuss the most serious of the series of journalistic crimes—their brass check handling of our defense bind, and their attempts to focus blame on politics for our sorry position as second class world power, rather than truthfully place the blame on the man who should have known better, but let us slide for 8 long years.

General Taylor, General Medaris, and a host of other Army, rocket and missile experts, have testified that we are at present in a seriously vulnerable position; that the Soviet is far ahead of us, and that there is little chance for us ever to catch up.

To counteract this damaging evidence of too little too late under the rule of a former great general, the kept press strung smash headlines across their front pages quoting Ike's boast that he knew more about weapons and armaments than any man in this country.

All we can ascertain is that Ike has left all planning and defense to his various Chiefs of Staff and required from them only reports—and brief at that. Of course the ex-general is acquainted with conventional weapons. But they are as outmoded as would be the *Mayflower* against a modern destroyer. The only weapon we know that Ike is thoroughly familiar with these past 8 years is a quail killer. He actually drooled like a boy with a new shotgun when this week the Chief made his first visit to the U.S. missile installation at Cape Canaveral.

And secondly, Newsweek, still covering for Ike, gaily stated in the current issue that the opposing political party hopes to plant a doubt (about our defense) that could grow fast in the public mind and any worsening of the world situation might shake publice confidence in Ike's judgment in general.

Holy mackeral. This, in the face of even Allen Dulles' testimony from Central Intelligence, that Secretary of Defense Gates, who speaks as does Eisenhower, has given the Nation tranquilizing testimony instead of harsh facts.

Free Election for Germany—A Foundation of Western Policy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 26, 1960

Mr. WILEY. Mr. President, as the time draws nearer for the upcoming summit meeting, the world spotlight focuses again on the task of resolving the East-West differences relating to ultimate reunification of Germany.

There are, of course, a wide variety of complex factors for which solutions must be found.

Fundamentally, however, the German people must be allowed the right of self-determination in selecting their system of government for the future. This principle has been—and should remain—the foundation of Western policy.

We recognize, of course, that—as in the past—the Soviet Union can be expected to oppose such a proposal. The reason is obvious: that is, that they just can't expect to win a free election.

Nevertheless, I believe the Western Powers must reaffirm their adherence to the principle of providing the people of Germany the opportunity to select—under supervised elections—their own political system. The purpose of a supervisory body of international status—would be to assure noninterference by the Communists in the elective process.

The effort would accomplish the following objectives:

First. If adopted, it certainly would provide the most desirable way of determining the future of Germany.

Second. If Soviet opposition prevents the election, it would put the free world again on record as being in favor of government by self-determination, rather than allowing the superimposing of a system of government by an outside power; and

Third. It would put the Soviet Union again in the position—in the eyes of the world—of being opposed to a free choice of government by the German people.

In view of the growing nationalistic trend throughout the world, it would be particularly timely, I believe, to again acclaim what we historically believe is a birthright—that is, the privilege of a people to select and operate their own social, economic, and political systems.

As the Western Powers seek to find ways and means for making progress toward settling, not only the question of Berlin, but of all German reunification, I believe we certainly cannot overlook this opportunity to reaffirm our belief in the essential value of ultimate free elections in Germany.

Recently, the New York Times published an article by an outstanding writer, James Reston, entitled "U.S. May Urge Plebiscite in East and West Germany."

Reflecting a number of factors involved in the approval of Germany reunification, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 24, 1960]

UNITED STATES MAY URGE PLEBISCITE IN EAST AND WEST GERMANY

WASHINGTON, February 23.—The U.S. Government is seriously considering a new proposal designed to break the long stalemate with the Soviet Union over the future of Germany. This is to suggest to Premier Khrushchev at the summit meeting in May that a plebiscite be held in both parts of Germany to determine whether the German people favor the Western plan or the Soviet plan for the future of the country.

Secretary of State Christian A. Herter is reported to favor this procedure and has asked Chancellor Adenauer, of West Germany, and the British and French to consider it. It is understood that the West Germans are willing to have the question discussed at the summit.

[Diplomatic sources in London said Tuesday that intervention by the heads of the Western governments or by their Foreign Ministers would be necessary to reconcile Western policies for the summit conference.]

GIST OF THE WESTERN PLAN

The Western plan for Germany's future, put forward in a long series of meetings at the Foreign Ministers' Conference in Geneva last summer, proposes, first, the formation of an all-German Government after internationally supervised free elections. It would recognize Germany's right to retain or abolish security arrangements with the West.

The Soviet plan would arrange for separate peace treaties with Communist East Germany and the West German Federal Republic, establish a demilitarized free city of Berlin, and leave it to the two Germanys to try to settle their future as a neutralized state, strictly limited in national armaments.

U.N. WOULD SUPERVISE VOTE

Andrei A. Gromyko, the Soviet Foreign Minister, categorically rejected the Western plan at Geneva. Secretary Herter suggested that the title of the Soviet proposal should be "Soviet treaty for the permanent partition of Germany." The British Foreign Secretary, Selwyn Lloyd, called it a device to assure the "enforced neutrality" of Germany.

For the last few weeks, in the preparatory talks for the summit meeting, the Western Powers have been seeking ways to end this impasse. This is why Secretary Herter has suggested the plebiscite proposal.

His principle is that the Germans themselves should have the opportunity to resolve the question of how to proceed especially since Moscow has been emphasizing that the Big Four should sign peace treaties with both Germanys and then leave it to the Germans to settle their differences without outside interference.

Under Mr. Herter's proposal, the United Nations would be asked to supervise the proposed plebiscite and Mr. Khrushchev would be asked to support the principle he defined in his speech at the end of the 21st Congress of the Communist Party in Moscow February 5, 1959.

At that time the Soviet Premier stated:

"Every nation must decide for itself which social system suits it. When it decides, it is its own business.

"Nor do we object to the so-called free elections that are spoken about so much in the Western countries, if the Germans of the two German states agree to conduct elections without the interference of a third party.

"We can indeed assume that the Germans will at some time want to conduct free elections to abolish the capitalist system in West Germany."

In recent weeks, however, Mr. Khrushchev has apparently drawn a distinction between allowing the principle of self-determination in social and economic systems on the one hand and political systems on the other. He is opposed to self-determination for the latter.

When President Giovanni Gronchi, of Italy, was in Moscow this month, he asked Mr. Khrushchev what he thought of putting the Soviet proposal for a demilitarized free city of Berlin up to the people of that city in a plebiscite.

ADENAUER REPORTED REPLY

According to Chancellor Adenauer, who reported this question to his Parliament, Premier Khrushchev replied that West Berlin could chose the economic and social system it wanted but that the principle of self-determination could not apply to the city's future political status.

The citizens of West Germany and West Berlin far outnumber the citizens of East Germany and East Berlin. This is undoubtedly the main reason why the Russians are unlikely to accept Secretary Herter's proposal.

Nevertheless, the U.S. Government feels that the principle of self-determination should be defended in deciding the future of Germany. The United States did not do so in Vietnam, and Moscow is not likely to accept the idea in Germany, but it will at least provide a new basis for discussion of the question in the preliminary summit talks.

Deductibility of Tuition Costs

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. DERWINSKI. Mr. Speaker, because of my intense interest in this matter and my need for reminding the Con-

gress of its obligation in this field, I am placing in the RECORD a letter received from Mr. William H. Vander Vliet, principal, Calvin Christian School, South Holland, Ill., on the subject of deductibility of tuition costs paid by parents to educate their children in church affiliated schools.

The letter follows:

CALVIN CHRISTIAN SCHOOL,
South Holland, Ill., February 12, 1960.

Hon. EDWARD J. DERWINSKI,
New House Office Building,
Washington, D.C.

DEAR MR. DERWINSKI: The subject of this letter is not a new one, to be sure. It regards deductibility of tuition costs, which are paid by parents to educate their children in a parentally controlled church-affiliated private school such as the one which we operate, from gross income.

We would request your kind attention to the following bases for justification of the above mentioned problem:

1. Private Christian schools perform a service to society.

2. Discrimination exists under the present law:

(a) Parochial schools: Parents pay tuition money to the church and it is, therefore, deductible.

(b) A variety of plans are being used for deduction.

(c) Property taxes (revenue financing public schools) is deductible for all, but only parents who do not have children in a Christian school may deduct contributions to that school.

3. Tuition is technically a sum of money assessed to parents for the privilege of enrolling children in a Christian school.

4. Deductibility meets the spirit and intent of the law.

Since our type of private school is in essence of spirituality, philosophy, and curriculum a parochial school, direct church control excepted; since it derives part of the funds for its operation from the various Reformed churches in the area; and since 99 percent of its student body are members of these same churches; our situation is a rather unique one. Financially, the framework of the organization of our schools is more closely related to that of the parochial schools than the other private schools in our Nation.

On the basis of the foregoing, we would, therefore, submit for your consideration the following possible solutions:

1. Introduction of a bill into Congress similar to bill H.R. 645 which would alow tuition deductibility from gross income.

2. Readjustment of the intent of, or reinterpretation of the law in re the financial structure of our schools.

3. Reorganization of the financial structure of our schools re support.

We gratefully acknowledge the contributions which men like you may have made or will make in our behalf. We sincerely hope that your decisions may always be made for the welfare of our country and to the glory of God.

Very truly yours,
WILLIAM H. VANDER VLIET,
Principal.

Wilderness Wish

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish to introduce into the RECORD an editorial from the Record-Courier of my hometown of Baker, Oreg. This editorial deals with the controversial question of wilderness preservation.

The editorial follows:

[From the Baker (Oreg.) Record-Courier, Feb. 11, 1960]

WILDERNESS WISH

Too many persons criticize the efforts of some to preserve primitive, wild, and wilderness areas without understanding the basic drive which motivates the efforts.

The relaxation and seclusion of spots isolated from the pressures of society are almost a prescription for well-being. Lucky are those who pursue such sojourns often as weekend pastimes. Even fortunate are those who can do so and get escape for a week or two during vacation, summer or winter.

But unaware of the benefit are the million who do not realize that many of the ills of their own bodies and their own impatient and intolerant attitudes and viewpoints in meeting the economic and political problems of the day are due to a failure to relax and achieve new perspective.

Thus we have thousands who realize the value of natural retreats and potentially thousands more. Even doctors are leading the parade of escape from city congestion and innumerable of them are retreating as far from a telephone as they can get 1 and 2 days a week, and there are many workers who operate under greater pressure, so that as time goes on the wish for wilderness will increase.

Also, the critics of this fundamental conservation fail to realize that some of the drive for wilderness principles is motivated by the uncalled-for desecration of our surroundings of daily living. A sense of beauty within cities and towns, highways, and roadways views free of the pollution of man-made billboards, opportunities to breath unpolluted air or boat or swim in unpolluted streams—all of these things mean that man in desperation is seeking some protection from complete annihilation of natural and aesthetic values. The wish for wilderness is growing. It need not be a major threat to any commercial values because sufficient areas are already in reasonably primitive state if their management and administration and permanence can be assured, and if in our hourly and daily living we can also enjoy some of the freshness that we can't drink in sufficiently only 1 week a year.

Federal Legislative Objectives of American Public Welfare Association

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, February 26, 1960

Mr. HUMPHREY. Mr. President, the American Public Welfare Association does a wonderful job of defining the welfare needs of the American people. The board of directors of this association has approved a comprehensive list of goals for legislative action in 1960 to meet these welfare needs.

Congress should give very serious attention to this list. It concerns problems affecting millions of Americans directly and ultimately the welfare of us all in the United States.

I am delighted that the Senate has already acted on legislation to help control and prevent juvenile delinquency, as recommended by the association. I hope this Congress will act soon on other important welfare measures listed by the association.

I ask unanimous consent that the statement and list of legislative objectives of the American Public Welfare Association be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FEDERAL LEGISLATIVE OBJECTIVES — AMERICAN PUBLIC WELFARE ASSOCIATION, 1960

The American Public Welfare Association believes that the States and their political subdivisions have the primary responsibility for developing and administering effective public welfare services in the United States. The Federal Government has the obligation to develop nationwide goals and to use its constitutional taxing power to equalize the financing of public welfare so that public-welfare services may be available on a reasonably equitable basis throughout the country. The States, their political subdivisions, and the Federal Government, in cooperation, must provide the leadership and the professional and technical personnel to carry out these obligations. The association's legislative objectives are based on these premises and on the recognition of the importance of preserving and strengthening family life, encouraging self-responsibility, and assuring humanitarian concern for individuals and families.

To accomplish these purposes the association believes that—

Contributory social insurance is a preferable governmental method of protecting individuals and their families against loss of income due to unemployment, sickness, disability, death of the family breadwinner, and retirement in old age;

Public welfare programs should provide effective services to all who require them including financial assistance and preventive, protective, and rehabilitative services, and these services should be available to all persons without regard to residence, settlement, or citizenship requirements;

The benefits of modern medical science should be available to all; and to the extent that individuals cannot secure them for themselves governmental or other social measures should assure their availability; and

Democracy has a special obligation to assure to all the Nation's children full and equitable opportunity for family life, healthy growth, and maximum utilization of their potentialities.

These general principles are amplified in other policy statements approved by the Board of Directors of the association. The welfare policy committee of the association has reviewed all of these statements in the light of current needs and has developed specific legislative objectives for 1960. While the following list does not include all of the association's policy positions, it presents in condensed form those immediate and longer range legislative objectives which are most likely to be of current significance in improving public welfare services.

PUBLIC WELFARE PROGRAMS

Scope of program

1. The comprehensive nature of public welfare responsibility should be recognized through Federal grants-in-aid which will enable the States to provide not only financial assistance (including medical care) and other services for the aged, the blind, the disabled, and dependent children, but also gen-

eral assistance and services for all other needy persons.

2. Federal financial aid should be available to assist States in carrying out public welfare responsibility for preventive, protective, and rehabilitative services to all who require them, irrespective of financial need.

The Federal Government should participate financially in State and local projects which would encourage, extend, or establish programs for self-support, self-care or the rehabilitation of persons receiving or likely to need public assistance.

3. The Federal Government should participate financially only in those assistance and other welfare programs which are available to all persons within the State who are otherwise eligible without regard to residence, settlement, or citizenship requirements.

4. In order to strengthen family life, the aid to dependent children program should provide Federal aid to the States for any needy child living in the home of any relative.

5. Specific provisions should be made for Federal financial participation in the maintenance of children in foster care.

6. Child welfare services in the Social Security Act should be broadened in scope, should specifically include child welfare services for the delinquent child, and the funds authorized and appropriated should be increased in all States sufficiently to extend and improve their programs compatible with the growing child population and the continuing advances in knowledge which make more effective services attainable.

Specific provision should be made for Federal financial assistance to States to stimulate and support programs for the prevention and control of juvenile delinquency. This should include research and the training of personnel.

7. The category of aid to the permanently and totally disabled should be modified by eliminating the Federal restriction requiring a disability to be permanent and total and by eliminating the age requirement so that all needy disabled persons may be aided under the program.

8. The Federal Government should participate financially in the development of specialized services for the aged, irrespective of financial need.

9. The Federal Government, in cooperation with the States, should study the restriction on Federal financial participation in assistance payments to adults living in public nonmedical institutions.

Methods of financing programs

10. The continuation of the Federal open-end appropriation is essential to a sound State-Federal fiscal partnership in all aspects of public assistance. Since it is not possible to predict accurately the incidence and areas of need, flexibility, and comprehensiveness are necessary in financing public assistance programs.

11. Federal financial participation should be on an equalization grant basis provided by law and applicable to financial assistance (including medical care) for all needy persons, welfare services (including child welfare), and administration.

12. Any maximums on Federal participation in public assistance (including medical care) should continue to be related to the average payment per recipient and should be increased sufficiently to assure reasonable standards of maintenance, comprehensive medical care of high quality and appropriate quantity, and the preservation and strengthening of family life.

Federal participation in aid to dependent children should be increased to a level which will assure treatment of children equitable with that accorded other public assistance recipients.

13. There should be no reduction in the overall Federal proportion of assistance and service expenditures unless and until changes in the scope and adequacy of Federal legislation affecting public assistance and social insurance enable the States to meet needs more effectively.

14. No change should be made in the Federal matching formulas which would result in a reduction in the Federal share of State and local administrative costs.

15. Federal aid for public assistance should be on the same basis for Puerto Rico, the Virgin Islands, and Guam as for other jurisdictions. In particular, the annual dollar limitations on Federal participation should be removed.

16. The Federal Government should participate financially in the costs of any State and local civil defense welfare services.

17. Federal legislation should provide funds for American nationals in need of assistance and other services who are repatriated from abroad.

Administration

18. States should have the option to administer Federal funds for assistance and services by categories or by a single comprehensive program covering all needy persons.

19. Adequate and qualified personnel is essential in the administration of public welfare programs. Federal financial participation in administrative costs of State welfare programs should be sufficient to enable States to provide for the adequate administration of all welfare programs.

20. Adequate Federal funds should be authorized on a permanent basis to assist States in training staff for State and local public welfare programs and moneys should be appropriated for this purpose.

21. All public welfare programs in which the Federal Government participates financially should be administered by a single agency at the local, State, and Federal level.

22. Federal, State, and local public welfare agencies should participate in and assist in the administrative coordination of all related programs in which there is Federal financial participation.

23. The administration of the Children's Bureau should be maintained within the Social Security Administration.

SOCIAL INSURANCE PROGRAMS

OASDI

24. The contributory old-age, survivors, and disability insurance program, as a preferable means of meeting the income-maintenance needs of people and as a means of keeping the need for public assistance to a minimum, should be strengthened. Among the needed improvements are, making benefit payments more adequate; increasing the amount of earnings creditable for contribution and benefit purposes in line with current conditions; providing benefits for disabled insured persons of any age and for their dependents; extending coverage to earners still excluded.

25. Health costs of old-age, survivors, and disability insurance beneficiaries should be financed through the OASDI program. Arrangements for achieving this objective should take into account the priority needs of the groups to be served; availability of facilities, personnel, and services; and protection and encouragement of high quality of care, including the organization of health and related services to effect appropriate utilization of services and facilities.

26. The funds of the insurance program should be available to help restore persons on the OASDI disability rolls to gainful employment since such expenditures would result in a net saving to the fund and increase the number of persons rehabilitated.

27. To the extent that changes to improve the OASDI program increase the cost of the program, contributions should be increased to insure the financial stability of the program.

28. The membership of the Advisory Council on Social Security Financing, established by the 1956 amendments, should include representation from public welfare and its functions should be broadened to include responsibility for recommending improvements in all aspects of old-age, survivors, and disability insurance, with particular emphasis on methods of keeping the program in line with current economic conditions and with changes in levels of living, and as a means of keeping the need for public assistance to a minimum.

29. Adequate and qualified personnel are essential in the administration of the old-age, survivors, and disability insurance program. Federal funds should be utilized for the professional training of staff in institutions of higher learning.

Unemployment insurance

30. The unemployment insurance program, as a preferable means of meeting the income-maintenance needs of unemployed people and as a means of keeping the need for public assistance to a minimum, should be strengthened. Among the needed improvements are: establishing Federal standards which would assure more adequate benefit payments including benefits for dependents; extension of coverage to earners still excluded; provision for a minimum duration of benefits and appropriate extension of the duration during any period of extended unemployment; provision for more equitable eligibility conditions; provisions for less restrictive disqualification requirements; and an increase in the amount of earnings creditable for contribution and benefit purposes in line with current condition.

Other social insurance

31. Study should be given to ways of improving and extending, on a sound social insurance basis, temporary disability insurance benefits and workmen's compensation programs, with emphasis on planning for effective medical care and vocational rehabilitation.

RESEARCH AND DEMONSTRATION PROJECTS

32. Federal funds should be authorized and appropriated for research and demonstration projects in all aspects of social security and public welfare.

RELATED PROGRAMS

33. The Federal Government should provide leadership, funds and research for the promotion of health and the prevention of sickness and disability contributing to dependency. Federal health programs should encourage and enable State and local health departments to make a more effective contribution to broad programs of physical restoration. In view of the increasing number of children and the increasing cost of medical service, the amounts authorized and appropriated for maternal and child health and crippled children's services in the Social Security Act should be increased.

34. Public welfare has a responsibility to assure that comprehensive rehabilitative services are made available to persons who require them. In carrying out this objective, public welfare programs have the responsibility to restore individuals to self-care and independent living and to strengthen family life. As part of this responsibility, public welfare agencies are concerned with the availability of adequate vocational rehabilitation services for individuals who can benefit from them.

Since many eligible individuals in the United States still are deprived of vocational rehabilitation services, such services should be strengthened so that all vocationally handicapped persons who present reasonable possibilities of attaining a vocational objective would be served. The vocational rehabilitation program also should be strengthened by permitting States to desig-

nate the State agency which can most effectively administer this program.

35. Federal programs should provide more effective aid to help meet the needs of mentally retarded and other handicapped children.

36. The nonquota entry of foreign-born orphans should be limited to children who are placed for adoption in the United States with the approval of authorized social agencies, and to children who are adopted abroad by U.S. citizens residing in the country where the adoption takes place.

37. The Federal Fair Labor Standards Act should be amended to extend coverage and to increase the minimum wage in line with current conditions.

38. Federal programs should provide more effective aid to help meet the needs of migratory workers and their families.

Save a Spot of Beauty for America

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. HUMPHREY. Mr. President, I am always interested in the vigor and the variety of the many conservation movements in our country. Unquestionably, without the enthusiastic work of these organizations, the coming generations of our country would not inherit many of the great natural resources which are their due.

In a recent article published in the January 1960 issue of the Reader's Digest, Mr. William Hard discusses the work of a fine organization, Nature Conservancy, whose executive director is Mr. Donald B. Stough.

The work of the dedicated members of this organization is discussed in interesting detail in the article entitled, "Save a Spot of Beauty for America."

I commend this article freely to my colleagues as an example of the kind of selfless and public-spirited work which goes on constantly throughout our Nation in behalf of the cause of conservation.

I ask unanimous consent to have printed in the Appendix of the RECORD, the article from Reader's Digest, "Save a Spot of Beauty for America."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAVE A SPOT OF BEAUTY FOR AMERICA

(By William Hard)

In 1893 Katharine Lee Bates, of Wellesley College, Massachusetts, wrote her imperishable poem, "America the Beautiful," with its ever-echoing last line: "* * * from sea to shining sea." In every one of the 67 years that have passed since then, America has lost some more of its original primeval natural beauty.

Streams which in Miss Bates' day flowed shiningly clear and clean to the shining seas are now dirtily and poisonously polluted with municipal and industrial wastes. Numerous industrial firms fight all legislation which they fear would oblige them to purify their wastes before discharging them into the flowing waters. And long shoreline stretches of the shining seas themselves are now so polluted that swimming often has to be prohibited.

Meanwhile, on land, residential developers, under the pressure of our exploding population, have changed thousands of lovely landscapes into deplorably crowded human habitation, sundered from nature. And many a logging company and mining company has turned a wilderness area into a scene of scarred desolation. We also have government agencies that will wreck a beauty spot rather than go a few miles around it. The town of Hebron in Connecticut had a lovely village green almost 250 years old. Two years ago the State highway department ran an enlarged traffic route straight through that green and utterly destroyed it.

And consider the case of one of the most hallowed natural areas in America. It is Walden Pond, in Katharine Lee Bates' own State of Massachusetts. More than 100 years ago one of America's noblest and most famous naturalists, Henry David Thoreau, lived on a shore of Walden Pond, in a hut made by his own hands. He came to know the birds, and they would come to his call. He came to know the fishes, and they would glide unafraid between his outstretched hands. In the midst of a settled community he preserved a wilderness.

That wilderness was in time deeded to the State, which in turn confided the care of it to the Middlesex County commissioners. Two and a half years ago, in the name of "recreation," those commissioners brought in bulldozers, destroyed trees, started a hard-top road, tore down part of a slope and tumbled it into the pond—and promised to continue such "improvements" for a period of 15 years. The Boston Globe properly called it "popular disfigurement" to replace a "cultural shrine."

The National Thoreau Society has taken the matter into the courts. It has received contributions for the cost of the court proceedings from virtually all over the world.

But I want to speak here principally of Nature Conservancy. It is a nonprofit membership organization which maintains headquarters in Washington, D.C., and helps local citizens in many parts of the country to establish natural areas which will be kept forever sacred against molestation and "improvement."

A "natural area" is surrendered to nature. City parks are most desirable. But a city park is nature tamed, tended, trimmed, manicured, artificially controlled. A natural area leaves it to uncontrolled nature to accomplish her own growing, changing wonders.

There are quite a few natural areas on the public land of the Federal Government. But they are far away from millions of our citizens. Nature Conservancy wants to help citizens to give themselves natural areas, privately owned, within easy reach of their own localities.

It has helped to do this in localities scattered all over the United States. It raises funds from membership dues and from donations by individuals and philanthropic foundations. It makes grants and loans to local groups and gives them technical advice. But it aims largely at inspiring these groups to be self-reliant and self-supporting. It does not want to be in the business of giving away wildernesses for free. A good example of its efforts can be seen on the Mianus River along the New York-Connecticut line, within 50 miles of New York City.

Here is a gorge with slopes that rise at some places to more than 200 feet. The river as it rushes between them is all fast white water. The slopes themselves have a great abundance of unspoiled wilderness, including some 300-year-old hemlocks that crowd together at a certain spot to form what has been named "The Hemlock Cathedral." A local committee decided some years ago to maintain this area as a protected natural area in cooperation with Nature Conservancy.

The committee has now accumulated 182 acres of land bordering both sides of the river for about 1½ miles. This is home for more than 100 species of birds, more than 160 species of wild flowers and nearly 100 varieties of trees, shrubs and vines. No census seems to have been made yet of the deer, squirrels, raccoons and foxes. No molesting of them is permitted. Scientists come to study them and their ways as they live out their lives, fearless of hunters or trappers.

But scientifically unlearned men, women and children come, too, in enlarging numbers. They must not erect camps. They must not smoke or build fires. They walk a system of marked trails. They listen. They look. They may be surprised to see a fallen broken hemlock. Why isn't it removed? Because this is wilderness forever. Nature will work upon that fallen broken hemlock. Insects. Ferns. Moss. That hemlock was born wild. Its body will change into new wildness. This is a "living museum," producing its own developing exhibits and refreshing our own human nature by reintroducing us to the wildness from which we all spring.

How was the Mianus Gorge conservation committee able to acquire this preserve? It borrowed money from Nature Conservancy. It has paid that money back. It got some of its land by generous local gifts. It acquired the rest by purchase. The total value of all its acquisitions is about $150,000. The number of contributions from local individuals and local organization is now more than 2,000. What a tribute to the zeal of private-life Americans for digging into their pockets to give their own locality an eternal heritage of wild beauty. (And the committee is now seeking an endowment fund of $100,000 to assure perpetual maintenance and protection of the Gorge area.)

Many Nature Conservancy natural areas are smaller and less costly than that at Mianus Gorge. Yet all of them have some special feature worth preserving. You may know of some such natural feature in your own neighborhood.

Got some bogs or swamps? Till lately it seemed to be thought that the only thing to do with bogs and swamps was to drain them to get more land for farming. Now our farmers are producing many basic farm commodities in quantities greater than we can consume. So we can safely preserve bogs and swamps undisturbed in order to enjoy seeing the plant and animal life that they so often possess in profusion. A thrilling example is Corkscrew Swamp in southern Florida.

It is a sawgrass swamp. That is, it exhibits the same sort of grass that at one time covered virtually all of Florida's famous watery Everglades. But Corkscrew Swamp also has great stands of majestic cypresses. Loggers coveted those cypresses, were about to move in on them. Nature Conservancy thereupon joined with the Audubon Society in raising the funds necessary for the preservation of the water and the sawgrass and the trees.

The Audubon Society, one of our oldest and most experienced conservation societies, now controls and patrols the area for the benefit of science—and of tourism. It has built a long boardwalk into the deepest recesses of the swamp so that tourists may see the swamp's plant and animal denizens, including ibises and egrets building nests in the trees to be the cradles of their young.

Or perhaps you know some venerable stands of other sorts of trees? Nature Conservancy has helped to perpetuate an impressive stand of oaks in Minnesota and a unique stand of hollies in Missouri. Or even exceptional growth of flowers. Nature Conservancy has helped to promote a lily-pond

preserve in Missouri. An area does not have to be large in order to be worth while.

Or an island? Lake George, in northern New York State, is beautiful—and historic. It is historic because of battles fought long ago among Frenchmen, Englishmen, Indians, Americans. Among its many islands is an outstanding one called Dome. The glaciers gave Dome Island a striking formation, and it now has a regal crown of trees. For years it was owned and guarded by a devoted conservationist. He then conveyed it, free to Nature Conservancy, which now diligently protects it from molestation. There it stands to be looked at, from shore or boat, with awe and with thanks to the Artist who fashioned the world.

Have you a nearby natural prairie? It is unlikely, because a natural prairie is one that has never been plowed. It exhibits to passerby, in miniature, the boundless and unending prairies, with grasses tossing like waves in the wind, that astonished our first Midwest settlers. Nature Conservancy, through local groups, has helped to preserve two stretches of natural prairie—in Missouri and in Ohio.

I cannot refrain from mentioning one more of Nature Conservancy's projects. It is in northern California, in an area where loggers and roadbuilders have all but wiped out the coast range wilderness. Yet, by happy fate, they have left untouched the whole of the drainage basin of a stream called Elder River. This basin is virginally intact from ridge to ridge. Nature Conservancy is in course of acquiring it.

At the heart of this project is a tract of some 3,000 acres sold to Nature Conservancy by its generous owner at a price that is but a small fraction of its actual value. The conservancy hopes to lease additional tracts of adjoining land. The total project will involve much money. But think what it will bring: the whole undisturbed natural basin of a river, from its source to its mouth.

Our population is doubling every 50 years. Each year we shall have to have more residential space, more industrial space, more connecting highways. I think we must draw this conclusion: now is the time to set aside the largest possible number of areas truly fitted to be called wildernesses. They will constitute but a tiny percentage of the total area of the country; let us save them now from future invasion.

Certainly these wildernesses add nothing immediately to economic progress. They will not give us more bales of cotton, more tons of steel, more kilowatts of electricity. They have a higher purpose, like churches. Materialistic as we Americans may sometimes be, we can still say:

O God, O nature, pray refresh my soul:
Refresh my body, too, and make me whole.

Budget Battle Continues

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BOSCH. Mr. Speaker, as we consider the many proposals coming before us daily for more and more Federal projects and programs, I think we should give serious thought to the end result. With each entrance of the Federal Government into a new field of spending, we take away initiative at the local level to perform those services historically carried on by the "homefolks." We must not foster a spirit of "Uncle Sam will do it."

Under leave to extend my remarks, I include an article which appeared in the February 19, 1960, issue of "Life Lines":

BUDGET BATTLE CONTINUES

Our Federal budget is too high. Our taxes are far too high. We shall have to reduce both spending and taxes if we are to press our Federal Government back into the mold the Constitution made for government with freedom. For instance, the budget for domestic welfare spending has been quietly going higher every year. Not much has been said about it. Recently, we have been confronted with a complete change in tactics. Suddenly there is a loud and insistent demand for greater Federal spending for domestic welfare.

One plan is to have the Federal Government lend capital funds to our States, cities, and local boards, so they can step up construction of local public works which they cannot finance by borrowing on their own credit.

The same story is repeated in the demand that the Federal Government supply local financial needs for airport construction, for rebuilding of our cities, for remaking the economic foundations of our distressed areas, for housing, for veterans and other private families. There are dozens of welfare projects, for which the Federal Government is to pay out the costs, from federalized medical care for those who get social security insurance to American contributions to a world scheme for disease prevention under U.N. control.

In some ways, facts about our Government's activities and plans are of no value except as we hold firmly to a body of principles by which they can be properly interpreted. Let us restate, then, the broad principles which we must keep in mind when we come to examine additions to Federal spending.

Our first principle is this—the Federal Government cannot add a thin dime to the amount of money spent for welfare or anything alse. Let us repeat that statement. The Federal Government cannot add one thin dime to the amount of money spent for welfare or any other purpose.

The Federal Government can take the money from private individuals, or from city and State government resources, but it cannot spend one dollar above what would have been spent anyhow.

Our second principle is this—what the Federal Government finances, it manages. So what happens when we change from management by individuals, private agencies, or local government, to management by one gigantic, faraway bureaucracy?

Our third point is this—have we turned to the magic of Federal spending because private individuals and local governments have not done their duty? Have we looked at the very real problems growing up about us, and closed our eyes and said, "We don't like to be bothered. The Federal Government will do the job."

Farm Policies Hinder Foreign Trade

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. PELLY. Mr. Speaker, I see where the Committee for Economic Development in its report a day or so ago called for an increase in American exports and making our products better able to compete with foreign goods by holding down costs and prices. The CED study was issued in the interest of reducing our deficit in foreign payments.

CED is an economic research organization supported by certain large business corporations. Its trade-deficits opinions were in a 32-page report entitled "National Objectives and the Balance of Payments Problems."

The situation is that U.S. spending abroad for goods, services, investment, and aid is greater than our receipts from exports, income in investments, and so forth. The deficit was approximately an average of $1 billion per annum from 1950 through 1956. But in the last 2 years this red figure runs to a total of about $7.5 billion.

The report cited the U.S. high price support farm program as the single biggest Government obstacle to increasing our returns from overseas. It said our farm program prices domestic farm goods too high for sale abroad and forces the United States to curb trade.

To this criticism, what solution does the administration and the Congress offer? The Republican administration has long sought legislation to reduce farm price supports. This is in line with the CED study. On the other hand, Democrat agriculture congressional leaders push for higher subsidy supports.

My bill, H.R. 10350, would eliminate all acreage and price controls and cushion the abrupt action by diverting our huge Commodity Credit Corporation surplus to an expanded food-for-peace program on the basis of not disrupting world or domestic markets. Such a plan would serve to remedy our deficit in foreign payments as recommended by CED.

Many of my friends in the House who represent farm areas fear the effect of my bill. On the other hand, many others tell me their farmers favor some such legislation. Meanwhile, Secretary of Agriculture Benson warns that if we are not careful both the good and bad farm programs will be ended. He knows that public sympathy is getting worn thin and that the people won't stand for continuing surpluses and unbearable costs.

I have plenty of evidence that the public is fed up. I don't know how many people worry about the deficit in our balance of foreign payments and the economic issues raised by CED. But I do know Congress better heed such studies, and then in line with strong public opinion call a halt to the outmoded, obsolete, and ineffectual, costly farm support laws. The sparks of indignation are in the grassroots. Let the politicians fail to heed a fanning wind of dissatisfaction on the horizon and there will be some Members of Congress from both rural and urban districts who one of these days, as the saying goes, will show up missing.

Public opinion, by a large majority, favors legislation such as my bill to repeal the farm price supports. The Democrats have quite a majority of this House, but watch out, if President Eisenhower and the administration convince the voters that the Democrats are responsible for not enacting a farm bill to

end this most costly domestic failure in our legislative history.

Some grassroots opinions from my congressional district follow:

I believe that price supports, especially wheat and corn, should be abolished and let these commodities find their own market level. The surpluses of those items and the cost to the Government or taxpayer is ridiculous.

I believe in our system of private free enterprise. That is for everybody. I don't think that the Government should subsidize any person or industry. The farmers that realize most out of subsidy programs do not need them. The small farmers do not get enough out of the program to do them any good.

As for price supports, supports, however low, farmers will simply grow more of the supported article because of the assurance of securing a cash return.

Of all Government programs, this makes less sense than any other, in my humble opinion. I'll admit I'm not well versed in this area, but I don't know of any other line of endeavor where you are rewarded if you do and rewarded if you don't by the Federal Government.

It seems to me that Members of Congress have a terrible responsibility these days not only in serving the people but in protecting them from themselves. It's human nature to want everything, I suppose, but governments, like friends, have their fiscal limitations or eventually go bankrupt—an elementary fact which millions seem to disregard.

Mike DiSalle: Buckeye Governor With Bounce

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. YOUNG of Ohio. Mr. President, an excellent article about Gov. Michael V. DiSalle of Ohio appears in the January issue of Coronet magazine. The article praises Governor DiSalle's fine record as a public servant over the years.

The author of the article, Calvin Kytle, of Columbus, Ohio, has written for some of our Nation's finest publications and in 1957 won the Rosenwald grant for creative writing.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIKE DISALLE: BUCKEYE GOVERNOR WITH BOUNCE

(By Calvin Kytle)

Nine years ago the roly-poly ex-mayor of Toledo, Ohio, came to Washington, took a job that 20 other men had turned down and proceeded to wisecrack his way into the hearts of his countrymen.

"The President," he said, patting his impressive belly, "told me he wanted a man with guts. He got one."

The man was Michael Vincent DiSalle, and the job he took was that of Price Stabilizer under Harry Truman. During the height of the Korean war, he did what smart politicians said was impossible; he kept the lid on prices and ended up as one of the bright hopes of the Democratic Party. He put a ceiling on raw cotton in defiance of the powerful congressional cotton bloc. He stuck to meat controls in the face of stampeding livestock men. He said no, again and again, and he made his opposition like him.

Pressure only brought out the jokes: "Suppose I'm fired. The worst that can happen to me is that I'll have to go back to Toledo. I like Toledo."

Now 51, Mike DiSalle is back in Ohio, but not Toledo, and has just finished a first hectic year as Governor of the State. He's also in a key position to say who gets most of Ohio's 64 votes at the Democratic National Convention in July; Symington, Kennedy, Humphrey, Meyner, and Williams have been courting him actively. Should he go to the convention as a favorite son, which seems probable, he himself could easily get tapped for the Vice-Presidential nomination.

A lot of Ohioans will tell you that DiSalle has changed. That his appearance has changed is undeniable. He's shaved the whimsical mustache. He has also shed 40 of his onetime 215 pounds. No reporter nowadays can honestly call him squash-shaped or liken him to Winnie-the-Pooh. But Ohioans say he's changed in other ways; they point out that DiSalle was conspicuously sobersided on the stump last year. They said that as Governor he is no special protector of the little man. The main reason: his tax measures have added 2 cents to the price of a pack of cigarettes and a like amount to a gallon of gasoline.

DiSalle insists that he hasn't changed at all. "The people who say that I've changed are mostly the ones who never knew me very well."

Until his election as Governor, most Ohioans knew DiSalle chiefly from the publicity he got during his 2 years in Washington. Probably no politician in recent years has been received more warmly by the press or been covered more fully.

To Washington reporters this unpretentious, tubby little man seemed made to order for human-interest stories. They reported his administrative actions, but what figured most often in the headlines was his humor. ("They tell me cotton is not a commodity but a theology," he was quoted as saying after he'd stood up to the southern bloc. "I don't believe it.") His courage, his resilience, his good sense somehow got obscured.

The real Mike DiSalle is, or has been, a fine corporation lawyer and successful businessman; a serious student of political science; a conscientious administrator; and, above all, a passionate believer in the democratic process. The fact that he also has a natural sense of humor is almost incidental.

His humor is spontaneous and he invariably turns it on himself. He is, in truth, a soft-spoken man, whose mildness some people mistake for weakness. He dresses conservatively in department-store suits, generally in need of a pressing, and his shoes are often unshined. "I take my work seriously," he says, smiling, "but never myself."

Since taking office, Mike (everybody calls him Mike) has worked an average of 16 hours a day, 7 days a week. He's up every morning at 6:20, has a light breakfast, and is usually at his desk by 7:30. If he manages to make it home for dinner, he goes back to the office until 10:30 or 11 at night.

Probably the saddest thing in his life is that he can no longer cook or eat the macaroni with clam sauce and the spaghetti he loves. He runs quickly to fat, but the last time he was sick was when he had his tonsils out, 30 years ago. Despite his current Spartan routine, he has never been more cheerful. "I'm doing what I like," he says. "If I get 5 or 6 hours sleep, it's enough."

Friends have suggested that maybe he wouldn't have to keep such long hours if he didn't insist on reading every paper before signing it. When the new cigarette tax act was brought for his signature, he proceeded to read it carefully, even though kidding newsmen kept reminding him that every minute was costing the State $43. Suddenly Mike pointed to a printer's error that had escaped the attention of both the Lieutenant Governor and the speaker of the house. Had he signed it without correcting it, the act would have been nullified.

DiSalle did two things on taking office last January that immediately dramatized his philosophy of government. He introduced circulating cabinet meetings, each meeting being held in the office of a different department. And he opened all these meetings to the press.

"Take the mystery out of government," he says. "That's the way to build public confidence in it. The other day five Democratic senators came in, mad as fury. The newspapermen sat in. It was the most candid discussion I bet they've ever heard. I've invited the press secretary of the opposition (Republican) party to participate in my press conferences. I don't believe that happens any place else.

"In the past the Governors have always issued the orders to the party and the legislature," Mike says. "I'm trying to get us to operate in the open. People tell me, 'It looks bad if you say you want something and you get beat.' I've been beaten before and it didn't hurt long."

Of the several causes that DiSalle lost in his first round with the legislature, failure of his bill to abolish capital punishment undoubtedly disappointed him the most. "As a lawyer," he says, "I've seen an innocent person get the death sentence because a witness who wasn't even there misidentified him. I've seen a simpleton boy get the chair for a sex crime that aroused the community, while organized gangsters went free because they were well financed and well represented."

Working in the Governor's mansion in Columbus are nine convicts, eight of whom have been found guilty of murder. "My family has nothing to fear from these men, even though five of them sleep under the same roof with us," DiSalle says. "I find great doubt surrounding their convictions. I have become attached to many of them. I ask myself, 'What would society have gained if that man had been electrocuted?' I answer 'Nothing.'"

On capital punishment, DiSalle has even been opposed at home. "My wife said to me, 'If some sex maniac attacked your daughter, you'd want to kill him.' I say, 'Yes, but that's what makes it wrong.' I wouldn't become nearly so aroused if it was someone else's daughter. Justice has to have an even hand; it shouldn't be swayed by emotion."

The popular support he might have won by his stand on capital punishment was lost by introduction of his labor reform bill and passage of his various tax measures.

His labor racketeering bill shocked AFL–CIO leaders, who were outraged at the bill's severity; it would, for instance, impose prison sentences of 10 to 30 years for embezzlement of $20 or more. Although the bill would give 10 years to a union leader who accepted a bribe, it provided no punishment for his briber.

DiSalle admits that the bill was tough. "This is not directed against the labor movement but against individual who would take advantage of it. I was with labor in opposing right-to-work legislation, but I wouldn't accept 1 penny of campaign contributions from labor. I didn't want anybody to be able to say that my position was a bought

position; nor did I want anybody to be able to come to me later and say, 'You should drop your fight for labor reform because we financed your campaign.'"

Actually the labor reform bill was so extreme, it had almost no hope for passage. Now DiSalle will have time to work out a bill that labor will accept.

At no time during the storm did he lose his sense of humor. When he appeared before a house committee to testify on behalf of his labor reform bill, the chairman asked members to be brief with their questions and not "tax the Governor's time."

"That," said the Governor, "will be the only thing we haven't taxed."

The day after his sales-tax bill passed, the Columbus Citizen ran an 8-column, page-1 streamer: "Mike's Got to Go." Mike, however, is confident that voters will return their support once they understand that the $311 million increase in revenue was absolutely necesary to get the State out of the red (he says he inherited a deficit of $10 million to $15 million) and to provide minimum services.

DiSalle also has been criticized for bypassing the experienced, smooth-working delegation from Cleveland's Cuyahoga County in favor of two relatively untried assemblymen as speaker of the house and Senate majority leader. The result was to antagonize a faction that represented 25 percent of the State's voters and to make it extremely difficult to exert party discipline. DiSalle's intention, however, was quite clear. This was the first Democratic legislature in 11 years. He simply did not want it and the party stamped with Cleveland's brand of boss politics.

Ever since he was first nominated for Governor in 1956 (he lost to Republican C. William O'Neill by 427,885 votes), DiSalle has been trying to rebuild the Democratic Party. He appointed his own State chairman and began to build from the grassroots. Some evidence of his success: in 1958, Democrats ran for offices that had been uncontested for years. Only 5 seats in the lower house were uncontested whereas in 1956, 20 seats had gone by default.

He does not scorn the use of patronage. "Right after the election we called party leaders from all over the State into an open meeting in Toledo. First time in anybody's memory this had been done. We said we were going to give jobs to Democrats, but they would have to be qualified."

What little time DiSalle has for recreation he spends with his family. He has a boy and four girls, the eldest of whom is 28-year-old Antoinette. Old-timers in the State's employ have observed that under Mike the mansion has come to look more like a home and less like a formal tea party setting.

His only hobbies now are reading and book collecting. He owns 70-odd books by Horatio Alger, mostly first editions, and keeps a couple of people in New York on the lookout for more. "They're very simple books," he explains. "Truth always wins and the good boy always gets along. They remind me of some things I never want to take for granted." He is also fond of contemporary biographies of Presidents, and was especially delighted recently to run across a biography of Millard Fillmore.

"People ask me why I'm interested in people like Fillmore. Well, I learn a lot from them—for one thing that, regardless of background, when a man becomes President, he always tries to live up to the responsibility."

The eldest of seven children, DiSalle was born of Catholic parents on Sullivan Street in New York City on January 6, 1908. His mother and father came from the Italian village of Vasto. His father, Anthony, was a punch-press operator. When Mike was 3, Anthony's factory moved to Toledo, and the DiSalles moved with it. Thrown out of work at the bottom of the depression, Anthony started his own electroplating business in his back yard. Today the firm grosses more than $1 million a year.

Mike didn't speak a word of English until he was 5. "Until I started school there was no need to speak English. You can't imagine what it's like, going to school and not being able to say a word to the other kids. I suppose that's what drove me to the library so early.

"When I was in the fifth grade we were asked to write a composition on what we wanted to be. I wrote that I wanted to be a public official." When he was 25, a fledgling lawyer scarcely 2 years out of Georgetown University, he ran for clerk of the Toledo municipal court and was soundly licked.

In 1937, he ran successfully for the State house of representatives. He was defeated when he ran for the State senate. In 1942, he was one of two Democrats elected to the Toledo city council and was reelected four times. He was twice vice mayor and was in his second term as mayor when Truman asked him to be price boss.

It was as vice mayor in 1946 that he set his precedent for sticking his political neck in the noose of tax reform. Toledo was broke. The voters had rejected ten bond issues to pay teachers' salaries and other expenses. Mike chaired a committee sponsoring a 1 percent city income tax on corporations and individuals. The CIO demanded a $2,400 exemption for a married man with one dependent and forced a city-wide referendum. But the tax was passed and 5 years later Toledo had raised more than enough money to pay off $14 million and to increase services.

In 1949, Toledo was locked in one of the country's bitterest labor disputes. For 7 months, a panel of 18 citizens, 6 each from industry, labor and the public, had tried to bring peace. It looked hopeless until DiSalle asked the labor representatives to write down what they thought management's rights were, and management representatives to make the case for labor. At that moment, the citizens labor-management committee—the so-called Toledo plan—was born. It worked.

DiSalle's experience in State elections has paralleled that of his party. He ran for Congress in 1946 and lost; he ran for the Senate against John Bricker in 1952 and lost; he ran against C. William O'Neill for governor in 1956 and lost. He ran against O'Neill again in 1958 and this time he won.

His wife, Myrtle, has long since stopped trying to get him to give up politics. DiSalle's friends say he won't be satisfied until he gets into national politics—either as national chairman of his party or as a member of Congress or something higher. Mike himself isn't saying. "I've always felt that you can't plan a political career. You've got to live it. There are tides that come in and out that are going to take you one way or the other."

A new tide could sweep Mike DiSalle back to Washington. Till then, he's content to take his cue from Mark Twain: "Always do right. This will gratify some people and astonish the others."

March of Dimes Annual Report

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. KEATING. Mr. President, I would like to call attention today to an excellent and highly informative report recently released by the National March of Dimes Foundation describing the vigorous and constructive efforts devoted to the prevention and cure of polio. This report, by Mr. Basil O'Connor, president of the national foundation, is indeed an inspiring testimonial to the fine work being done by the national foundation. The National Foundation, like the many other fine and selfless national organizations dedicated to the stamping out of sickness and disease, merits our highest praise.

Mr. President, I ask unanimous consent to have excerpts from the foundation's report printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

BUILDING A NEW HEALTH PROGRAM

(By Basil O'Connor, president, the National March of Dimes Foundation)

The national foundation has moved vigorously into the task of translating an enlarged health program from paper to action. A good beginning was made in 1958 toward new goals in research, medical care, and training of essential personnel.

Concurrently through the year under review the organization has continued to discharge heavy responsibilities in the field of poliomyelitis. Provision was made for medical care and rehabilitation of thousands of polio sufferers—most of them having been stricken years ago—and research was extended in the area of polio prevention.

It has been a rewarding year—exacting in the volume of work in new ground and the added financial burdens that were inevitable in the transition, but exciting because of the importance of the objectives. A progressive role of greatly augmented usefulness in combating disease and disability has been assumed by your National Foundation, and the close of the year found the organization well on its way toward fulfillment.

BACKGROUND

Your board of trustees, as far back as 1952, was of the opinion that the national foundation, through its long fight on polio, had so equipped itself as to serve eventually as a flexible, dynamic, and highly effective force in America against illness and disability—not only the effects of polio but human damage resulting from many other causes. Underlying the opinion were these facts:

That a unique and highly creative research program, developed in recognition of the overlapping nature of disease problems, had uncovered promising leads to further study and possible prevention of a wide variety of virus and other diseases.

That through the cooperation of local medical advisory committees with informed and dedicated volunteers in thousands of communities throughout the country, a competent system had evolved for providing care to the disabled; and

That a multimillion-dollar program for the training of scientists and experts in the medical and allied professions was in full operation, having long proved of indispensable worth to the Nation in combating acute personnel shortages.

Any one of these facts was a persuasive argument for continuing the work of the national foundation. The combination left no doubt in the minds of your board of trustees nor of expert independent advisers who had been consulted.

Studies were made to determine the most productive course of action, and on July 22, 1958, the national foundation revealed a new concept of its usefulness and announced

to the public the specific initial objectives of its expanded program.

BLUEPRINT

The national foundation was described in that announcement as an organization for medical research, patient aid, and professional education with a program that henceforth would not be restricted to any one disease or condition. It would have specific goals initially but would be flexible enough to meet new disease problems as they arose and to pursue expeditiously the solution of existing one as and when new opportunities to do so were created.

It is conceivable that through its broad-range research program, particularly in the field of the viruses, the national foundation may be enabled to forestall certain potential disease problems before they arise, or before they can become major threats to the well-being of the Nation, and perhaps to produce answers to others that have, up to now, defied solution.

It is a bold concept, demanding the utmost of us and of medical science. But it is also a valid recognition of the capacities of medical research as demonstrated under the sopnsorship of the national foundation, of the interrelated character of disease problems, and of modern medicine's approach to them. In the successful research work that has been done in polio, and in many other important recent findings, we have witnessed only the first impact of this approach. The possibilities are truly tremendous.

BUILDING THE NEW ON THE OLD

In all three main channels of its activity—research, medical care, and the training of experts—the national foundation's work in polio had laid a sound basis of experience and suggested a promising list of projects for a new program. Hence by July of 1958 the organization was ready to go ahead with much work it had already planned or hoped to do.

Research

Knowledge that was essential before a polio vaccine could be created had led scientist-grantees of the national foundation years ago into study of the basic problems of virology. These investigations extended deeply into questions of how living cells grow and multiply, and the role of cells in human illness.

Among the many important and promising projects instituted or continued in 1958 were studies of the mechanism of virus reproduction within cells and the genetics of cells grown in tissue culture, an exciting line of inquiry that may provide clues to the genesis of cancer and other diseases.

Important new knowledge of the causes and prevention of inherited diseases is expected to result from the very considerable stimulation given to genetics through national foundation-sponsored inquiries concerning cells and the complex chemicals they contain.

The year was opportune for studies of the effect of vaccination on the incidence of paralytic polio. These have strengthened the belief that the Salk vaccine, while it protects inoculated individuals from the paralyzing effects of the disease, does not prevent the spread of the virus in the community; hence an unvaccinated person is not safe from infection through carriers who may themselves be immune to paralytic polio.

Other recent studies have indicated that when expectant mothers are vaccinated against polio the antibodies from the mother enter the bloodstream of the unborn child, giving it temporary protection against paralytic polio. Also, it has been established that a single vaccine combining protection against diphtheria, tetanus, whooping cough and polio can be given safely and beneficially to infants as young as 2 months.

The possibility of using live-virus vaccine against polio was explored further. Extensive tests of such vaccines are now being conducted, but much more work will have to be done before a live-virus product can be put on the market.

The search was continued for effective antivirus drugs, for quick and reliable diagnostic tests for virus infections, and for the cause and prevention of kidney stones in bed-ridden patients.

Additional work was financed by March of Dimes funds on the nature of the rapidly growing list of known Coxsackie and "echo" viruses—the "camp followers" of the polio viruses—and on the possibility that these and other virus infections may cause disabling illness years after they attack.

The national foundation has made several grants to leading research centers for studies in the two major fields that were added to its program in 1958.

One of these is an approach to the problem of rheumatoid arthritis through the study of autoantibodies—antibodies that are "anti" to one's own tissue. Inquiry was begun into tissue reactions to injuries as a possible cause or precipitating factor in rheumatoid arthritis. Moreover, other scientists are trying to determine the significance of an abnormal protein (rheumatoid factor) present in the blood of persons afflicted with rheumatoid arthritis.

As a beginning of research into the causes of congenital malformations, national foundation grantees have been making detailed investigations and analysis of the aftermath of recent "echo" virus epidemics in Wisconsin and Minnesota. In those outbreaks the spread of infection was wide enough to include considerable numbers of expectant mothers. It is hoped the studies will show whether the virus infections of these mothers resulted in more abnormalities than usual among the babies.

The national foundation's allotment of funds for medical research in 1958 was $3,370,769. This brought the total investment for this purpose since inception of the organization in 1938 to $33,900,000.

Medical care

In the third year of relatively low polls incidence, residual damages of the heavy attacks of earlier years were still running high, still constituting a heavy drain on the national foundation. Most of the 57,700 patients who received assistance from March of Dimes funds in 1958 had been stricken in prior years.

However, there was also an increase in the 1958 cost of care for new patients because of scattered outbreaks of paralytic polio, largely among the unvaccinated. The epidemic in Detroit last summer, for example, cost more than a half million dollars in March of Dimes funds by the end of the year, and will necessitate substantial outlays for rehabilitation for years to come.

The allotment of March of Dimes funds for medical care in 1958 was $19 million as compared with $21,500,000 in 1957.

One of the primary objectives of the 15 respiratory and rehabilitation centers supported by the national foundation throughout the country is to cut down as much as possible the long-term hospitalization even of seriously disabled patients. For many such persons, indefinite custodial care in the hospital without special services for increased independence, means waiting for death, whereas going home, no matter how serious the involvement, is a chance once more to live. To achieve the transition to home care is a costly matter, often requiring expensive equipment and services; but it is a trade of dollars for human life—a kind of transaction your national foundation has ever been ready to enter, to the limit its finances will permit.

The centers, which also function in research for improvement of techniques in the care of the disabled, and in teaching and demonstration, provided 115,376 days of patient care in 1958. Some centers had to be operated at or above their capacities.

The 1958 outlay of March of Dimes funds for the support of the respiratory and rehabilitation centers was $2,342,951.

The bright record of these centers was a factor in leading your board of trustees to approve the establishment, beginning in 1959, of a new nationwide network of regional centers for the observation, evaluation and treatment of arthritis among children through the age of 18 years. Another such system to be devoted to the subject of birth defects is planned.

Manpower for health

A very large expansion of the available supply of trained personnel—larger than any now provided for—is a crying need in the health field today. Without it, modern medicine may be prevented from large-scale application of the improved techniques already developed.

In the face of this serious shortage, the national foundation in 1958 made significant advancements in its program of professional education, already the largest in the country conducted by a voluntary organization. New steps were taken to strengthen and broaden the appeal to young people to enter upon health careers; the effort was advanced to make more productive existing facilities and methods of this vital branch of education; and national foundation awards of fellowships were continued for advanced training in research, clinical medicine, and teaching.

A new 10-year $12 million national foundation college scholarship program was launched in October 1958. The purpose is to stimulate interest of young Americans in education in five health areas: medicine, nursing, physical therapy, occupational therapy, and medical social work. During the next decade at least 515 scholarships will be offered annually, each of $500 per year, renewable for 3 years at the same rate.

Through this program the national foundation, for the first time, will reach students in high school and their early college years. For the first time, too, support for 4 years of study is offered in these disciplines. Still another first is the way the program is to be conducted—that is, as a community service performed through the local chapters rather than as a completely centralized program.

This shift in primary responsibility from national office to local chapter is actually a reflection of basic approach. The national foundation hopes to encourage understanding by local communities of their own health problems, and to offer opportunities for each community to exercise its own initiative in meeting those problems.

As in previous years, grants were made in 1958 to colleges and universities as contributions both to the quantity and quality of teaching for the health professions.

There are experimental patterns in education just as in research. The national foundation is deeply involved in the experiments going on in medical education today; involved in changing basic attitudes, in raising standards, and in helping to develop curricula in medical schools and schools of the associated professions to train the kind of people needed for its expanded program and for modern medical care generally.

The Korean Section of the Conlon Report on Asia

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, February 26, 1960

Mr. ENGLE. Mr. President, the Conlon Associates, Ltd., of San Francisco, Calif., have prepared exhaustive study of U.S. foreign policy in Asia at the request of the Senate Foreign Relations Committee. This study, fifth in a series being issued on American foreign-policy problems by the committee, was published November 1, 1959. The Korean section of the report was authored by a distinguished political scientist from the University of California, Prof. Robert A. Scalapino. He has written an objective and very thought provoking analysis of the problems of this wartorn country. Although it is possible that his conclusions with regard to American policy needs will not be shared by all experts on the subject, I think the report is of sufficient importance to warrant its inclusion in the RECORD for the attention of the Members of the Congress and the public. I ask unanimous consent that it be printed in the Appendix.

I am advised by the Government Printer that the insertion will run beyond the two pages permitted, and will make three pages, at a cost of $243. I ask unanimous consent that the matter may be inserted in the RECORD notwithstanding the additional cost.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

KOREA

Korea stands today as the symbol of free world cooperation against Communist aggression, the remarkable courage of a stalwart people, and the American determination to save a frontier state. It is unfortunate, therefore, that the South Korean Government has not acquired the type of respect from the broad community of free nations or the degree of contact with them that would lend it greater strength. Except for its contact with the small states of Taiwan, South Vietnam, and the Philippines, a few European ties, notably West Germany, and its close relations with the United States, the Republic of Korea has been largely isolated from the non-Communist world.

The reasons for Korean isolation and free world misgivings over Korean politics are complex. The fault does not lie wholly on one side. In addition to its difficulties in projecting a satisfactory external image, however, the South Korean Government faces an increasingly serious political crisis at home. The viability of democratic institutions in Korea is on trial and political instability is a threat. Arbitrary decisions by officials and police-state suppression appear to be keeping pace with mounting political unrest. And in few areas of the world is American prestige more closely tied to the internal developments of a foreign state. Whether justified or not, the United States will be held responsible for what happens in Korea.

In many respects, the Republic of Korea lives on borrowed time. The Communists anticipated an easy victory in 1950 and came close to achieving it. For brief periods, they controlled almost the whole of the Korean peninsula. In retrospect, one substantial advantage emerged out of the war for the non-Communists along with the obvious tragedies. Usually, the appeal of communism is that of the unknown or the untried versus that of the government in power. But large numbers of Koreans now in the south lived under communism, at least for a short period, and therefore have some personal basis for judgment. The Korean Communists have not fared well in this competition. In the great natural "elections" produced by events in Korea, when people voted with their feet, the Communists suffered resounding defeats. The overwhelming flow of refugees was from north to south. The sizable leftwing movement in South Korea was also reshaped by the war and Communist actions. The "fellow traveler" element was sharply reduced. To the extent that the "left" plays a role in current South Korean politics, that role is essentially on behalf of Democratic socialism. Behind this lies the fact that the great body of Koreans, including the intellectuals, are genuinely anti-Communist today, partly as the product of wartime experiences.

These advantages, however, might be only temporary. The Republic of Korea cannot count permanently upon Communist failures of the past. Memories are often shaped to fit current discontents. More importantly, a younger generation is now growing up in Korea who are mainly aware of the present. Within a few years, this group will represent a significant portion of the electorate. There are also external factors that argue against complacency. The rise of Communist China as a major power will produce increasing pressures upon non-Communist Korea that can only be resisted through a combination of internal strength and external support. The route to internal strength does not lie merely through a large standing Army. It must also include the vitality of the nation and the morale of its people. In order to protect its future, the Republic of Korea will have to meet these latter requirements.

1. THE KOREAN ECONOMY

The Korean economy has been and continues to be heavily dependent upon American aid. Without that aid, it would collapse. The period of postwar reconstruction, however, is ending. Presently, a transition from mere survival to expansion is taking place. Accelerated economic growth for South Korea is now possible and likely, but the degree of progress is contingent upon a wide range of factors. Many serious problems exist.

Few societies, if any, in the modern world have undergone the travails of modern Korea. Colonialism, segmentation, and intensive war followed one upon the other. Japan contributed much to economic progress in Korea but it also shaped the overall economy in a typically colonial fashion, bequeathing to independent Korea a sharp economic imbalance. That imbalance was compounded by the artificial division of the country at the 38th parallel into the so-called "agricultural" South and "industrial" North. Five years later, Communist aggression cost Korea 1 million lives and damages estimated at $3 billion. Perhaps the real miracle is that this series of tragedies has not utterly destroyed the morale of the Korean people.

The current situation, however, holds promise along with problems. Industrial and mining production in South Korea have registered substantial gains in recent years. Progress in agriculture has been slower, but some advances are now being registered. In early 1957, the Korean Government, with the support of the American aid mission, undertook an austerity program. For the first time since the Korean war, inflation was brought under some control. In general, the signs indicate that the Republic of Korea is entering a phrase of more rapid economic development. Perhaps it is between the crawling and the walking stage at present.

Many stubborn problems remain. Inflation must still be considered a threat. The Korean production system has various weaknesses. It is characterized by a high degree of unevenness: highpowered and ultramodern equipment furnished by ICA and a small number of skilled workers coexist with antiquated methods and tools, sometimes in the same industry. Modern entreprenurial talent is scarce and its growth is inhibited by nepotism, the continued influence of the oriental family system. The interaction between business and government is extremely close, and marked by an unfortunately large amount of personal favoritism and corruption.

The problems of credit and investment are also difficult. Credit is both scarce and expensive; interest rates may run from 7 to 10 percent per month. Government investment in economic development must be limited as long as military expenditures remain so large. Private investment is also limited by a complex of factors: low savings proclivites, hoarding, and the channeling of funds into forms of investment other than industry. Moreover, conditions in Korea have not made it attractive to private foreign investment.

Living conditions in South Korea have greatly improved from the low point of wartime misery, but the Koreans are still a poor people. Some 75 percent of the people are engaged in farming and fishing, with per capita production estimated at not more than U.S. $50 per year. In proportion to cultivated acreage, Korean rural population density is the second highest in the world. That population is rising, moreover. The total population, swollen to over 22 million by northern refugees, is increasing at a rate of 1.6 percent annually. Urban living standards are rising faster than those of the rural areas, but the problems of underemployment and unemployment are grave.

South Korea has relatively meager natural resources, especially of the type required for industrialization. Indeed, the questions of how much and what kind of industrialization is economically sound for this state are critical questions that have never been sufficiently studied, since they are also questions highly fraught with political dangers.

Many of the problems noted above are common ones in the so-called late-developing societies, and there are no simple solutions. Tax reforms, an expanded credit system, and a rigorous campaign against corruption, waste, and inefficiency are all needed. What responsibility does the United States have? Since 1953, aid to Korea has totaled some $1.7 billion, the overwhelming proportion of this coming from the United States. A strong case can be made for the thesis that these funds have not been used as efficiently as they should have been, that American interests and objectives in connection with their use have not been sufficiently defined and defended, and that our generally weak position has created serious problems. The charge is common that American aid has created too many Korean millionaires and sustained too many corrupt practices.

There is some validity in this criticism. Basically, we have had a weak policy toward Korea in terms of stipulations, controls, and supervision. We have usually invoked the time-honored maxim "noninterference in the internal affairs of another state," despite the fact that massive aid obviously is interference and our responsibility for overall trends in Korea—and its ultimate defense—cannot be avoided. Clearly this is a complex and difficult matter, and one not confined to Korea by any means. It is one of the truly urgent problems in connection with eco-

nomic aid to late-developing societies. In Korea, the difficulties were doubtless compounded by the rivalries and divisions of authority that have prevailed among our separate diplomatic, economic aid, and military missions; recent administrative changes may bring some alleviation. But the broader elements of the problem will remain, and need to be faced squarely. These issues must not be used as the basis for underestimating economic assistance as a major weapon in the worldwide struggle against totalitarianism. But our techniques of aid, and our responsibilities in connection with aid, need to be basically reassessed.

2. KOREAN POLITICS AND SOCIETY

Korean democracy today stands in precarious condition. Some progress has been made, and, considering the events of the last decade—indeed, the last half century—perhaps the miracle is that any semblance of democracy exists. Nevertheless, democratic institutions face a very great trial in the immediate future, with the outcome unpredictable.

It can be argued that democracy has made fairly significant progress in the Republic of Korea since 1945. After a lengthy period of colonialism and authoritarianism, Korean politics have been marked by surprising vigor and intensive competition, a tribute, in part, to the independent character of the Korean people. A two-party system exists, with the Liberal and Democratic Parties both conservative in their general philosophy. The leftwing Progressive Party has now been outlawed; it had garnered relatively few votes except for the presidential election of 1956 when the Democratic candidate died prior to the election.

The Liberal Party, dominated by Syngman Rhee, maintains absolute control of the national government at present, with a strong majority in the National Assembly. Since the Korean political system is strongly centralized, this also gives the Liberals extensive control throughout the provinces. Both the popularity of President Rhee and that of the Liberal Party have dropped sharply, however, and the election of 1960 is in doubt, providing it is fairly conducted. The Democratic Party has steadily gained strength, especially in urban areas, such as Seoul, where it has won a series of overwhelming victories. Competition in Korean politics has never been more intense.

There is also evidence to indicate that the Korean people are participating in public politics on a larger scale and with more vigor and intelligence than at any time in their history. Their participation is marked by the growing exercise of individual free will, the hallmark of a democratic society. There is no blind worship of a national hero on the one hand, nor meek obedience to the orders of the village headmen on the other. Increasingly, even the rural electorate appear to consult their "self-interest" when they cast their ballot. In some rural areas, to be sure, the influence of traditional elements remain strong, but new groups, such as the Korean war veterans and the modern educated class, vie with the old centers of rural power. Korean society at present is extremely complex, and in a state of great flux and transition. The historic conservatism of this people, especially the peasantry, is being moderated by rapid socioeconomic changes. Thus, the political landscape of Korea is being substantially altered.

The force of provincialism in Korean politics is also receding, a force of enormous historic importance. The effect of modern war and massive dislocation has aided in this process. Some traces of the old order still exist, of course. There is a tendency to hire men from one's own district when convenient. The northerners now in the south have banded together to some extent and help each other when possible. Certain political groups show regional proclivities. It is often said, indeed, that the present national government is dominated by men from central Korea; similarly, the Chang Myun faction of the Democratic Party is known to include many northerners, although some of Chang's key advisers are from the south. Increasingly, however, regional differences and loyalties have been subordinated to a sense of Korean nationalism.

Each of the above factors in its own way indicates the progress of democracy and the Korean state. Yet the darker side of the picture demands at least equal attention. Throughout its brief history, the Republic of Korea has been marred by political violence, acts of flagrant suppression, and certain police-state tactics. And today, as the election of 1960 approaches, the Liberal administration is engaged in successive acts that can only be regarded as assaults upon basic democratic rights. The Democratic Party is being intimidated, its leaders threatened, its press restricted, and its general rights violated. The charge of "treason" is being used loosely to justify these actions, and laws such as the national security law are being rammed through the National Assembly over bitter opposition to give them legal sanction. At the same time, the Local Autonomy Act was amended to make the offices of mayor and township head appointive rather than elective, thereby greatly augmenting the power of the central government in what is obviously an attempt to make it impregnable at election time. Perhaps Korea does not have a two-party system, but rather a 1½-party system, with the opposition party intimidated and discouraged.

As has been noted, such tactics are not new. In 1952, for example, the Korean Army was deeply involved in the elections; in 1956, it was the police who served the political purposes of the administration. It has been less easy to apply these pressures in major urban centers; hence the relative strength of the opposition in such places as Seoul, Taegu, Pusan, and all larger cities. But in the rural areas police interference has frequently been extensive. The degree to which this type of pressure upon the electorate will continue and be effective is uncertain. Some evidence suggests that future pressures may be more subtle and that Liberal leaders will also resort increasingly to such tactics as public works and similar benefits to win votes. Perhaps neither the military nor the police can be utilized for coercive purposes in the immediate future since many within these ranks suspect that political changes will soon occur. The task of supervising the next victory may be handed to some new group such as the Anti-Communist Youth Association which the Liberal Party has been grooming. In any case, however, the signs are very disturbing.

Syngman Rhee has had many of the qualities of a successful leader, and he has acquired, not unjustly, the symbol of "father of the country." His popularity among the Korean people has been very high at points, but now it appears to be declining. In the elections of 1952, Dr. Rhee received approximately 72 percent of the popular vote, but his percentage dropped to 56 percent in 1956 despite the death of his leading opponent just before the election. One factor involved is his advancing age, another the desire for a change, and the feeling that one group has been in power too long. But Rhee is a revolutionary before he is a parliamentarian, and he has been a revolutionary for most of his 85 years. He will not give up power easily, and he and his supporters may not be willing to give it up at all, whatever the cost of staying in office.

Perhaps a case can be made for benevolent despotism in Korea. Democracy may not be feasible in a society with the internal problems and external threats faced by the Republic of Korea. At the very least, some tempering may be necessary in the initial stages, some tutelage during the period of transition. In these regards, Korea, despite its differences, shares certain problems in common with many late developing societies. But irrespective of these problems, the immediate issue in South Korea is one of political stability or instability, and the degree to which a people's confidence in their institutions and leaders is won or lost.

The Korean political future is obscure. If President Rhee were to die before the 1960 elections, the Liberal Party would probably continue in power by some means, preventing Chang Myun, the Democratic Vice President from taking office. In the long run, however, Rhee's death or retirement is likely to produce some important party realinements among the conservatives. Both conservative parties are loose coalitions at present, with various factions jockeying for power. The two main Liberal factions have been labeled the "Extremists" and the "Moderates," with the former still seemingly in control. Within the Democratic Party, men like Chang Myun and Cho Pyong Ok each have substantial numbers of followers. The differences separating factions in both major parties are not basically questions of policy or ideology, but questions of office and power. Hence coalitions are always complex and changes unpredictable. Probably Cho will be the Democratic nominee for President if Rhee remains in office until the 1960 election. Should Rhee pass from the scene, conservative party ranks would almost certainly undergo a process of regrouping, with elements of both major parties forming new units.

The indications are strong, however, that some conservative coalition will hold the reins of political power in Korea, at least for the immediate future, irrespective of Rhee's tenure in office. The left-wing, as represented by such groups as the now outlawed Progressive Party, is still relative weak. This is due to many factors: The continuing force of Korean conservatism, the impact of the Korean war upon the leftwing, and the control policies of the Government, among other things.

The leftwing may not remain weak permanently, however. As noted earlier, the younger generation is increasingly restive, and even among the older groups substantial sociopolitical changes are taking place. There is considerable danger that in Korea, as in some other parts of Asia, an "intellectual proletariat" will develop, a younger educated class finding insufficient outlet for their talents and energies. This problem has a special facet in Korea, as it did once in Japan. The opportunities for the talented children of poor families in civilian universities are very limited, due to meager scholarship funds. If they have any chance for higher education, it is usually via military schools. Thus, a number of bright young officers from the lower economic classes are emerging, filled with resentment against "special privileged" civilians and politicians. This could be explosive.

In a broader sense, it is legitimate to ask whether Korea will follow a pattern set elsewhere, and replace civilian parties with military rule? This is possible, but the odds seem somewhat against it, at least for the present. Currently, no military man has great political prestige or organizational strength in Korea. Within the army, there are many ambitious men. But up to date the military have been instruments rather than masters of civilian government. This is partly due to the skill with which the Liberal administration, and particularly President Rhee, has handled the army. Potential rivals have been sidetracked; strong, independent-minded leadership has been discouraged. Under the circumstances, factional disputes and attempts to gain the President's favor have flourished. If party government fails completely, military rule at some point is a definite possibility, but it is not likely to happen in the near future.

Thus, the prospects are for the continuation of conservative civilian rule in the Republic of Korea, irrespective of the lifespan of President Rhee and the outcome of the 1960 elections. This cannot negate the fact, however, that Korean democracy is on trial, and that the events of the next few years may well determine the support which democratic institutions can expect from the Korean people in the longer range future.

3. KOREAN FOREIGN POLICY

Korean foreign policy also faces a major challenge. Since 1945, the Republic of Korea has been strongly attached to the United States, and the Korean-American alliance is very likely to continue for many reasons. At the same time, however, Korea will probably make increasing attempts to lessen the isolation that has characterized her position in Asia and add new dimensions to her diplomacy.

The historic Korean problem has been that of a small nation wedged in between major and often aggressive powers. It is an obvious advantage to have a firm alliance with a major distant power like the United States which has no territorial ambitions. Put simply, Korea has less to fear and more to gain from American aid than from that of any other major power, and most Koreans are aware of this fact. But increasingly Koreans are also aware of the need for other friends and allies. There is a natural, growing desire for greater interaction with non-Communist societies other than the United States. One evidence of this is the newly found enthusiasm for West Germany, especially among many of the younger people. In intellectual circles, moreover, hope is rising that Korea can now have more meaningful contact with other Asian-African societies, especially those to the south.

Hostility toward Japan is substantial, especially among the Korean elite. Given political trends in Asia, close relations between Korea and Japan are important, perhaps imperative to the welfare of both societies. Yet the obstacles are formidable. Bitterness and racial prejudice exist on both sides, and are not confined to a tiny group. The roots of the problem are deeply imbeded in history, including recent history. For some 40 years, Japanese imperialism dominated the Korean peninsula. The Japanese did much to advance Korea in a technological sense, and provide law and order, but they could not destroy Korean nationalism, and their generally condescending attitude toward Korean culture created many barriers. Recollections of the past have been fortified by problems of the present such as fisheries and repatriation.

There are some rays of hope. Many Koreans have personal ties to Japan, either of respect or friendship, and most of the common people are not anti-Japanese. Moreover, even among those who harbor bitterness, increasingly there is a recognition that relations with Japan should be normalized in the national interest of Korea. There is considerable reason to believe that improvements can be realized, especially when Syngman Rhee ceases to be President, for his personal enmity to Japan is boundless.

The chances of Korean reunification in the near future are extremely remote despite the desires of the Korean people. There is some parallel with the German problem. The Communists cannot support peaceful reunification at present because they know that they would suffer heavy electoral defeats and become an insignificant minority. Nor do they wish to commence another war through any attempt at unification by force. They will be content to wait, hoping for mounting unrest in the south. On the other side, while the Liberal Party has threatened forceful reunification at times, the Rhee government is not likely to defy world opinion, including that of the United States.

Under these conditions, both the Republic of Korea and the rest of the non-Communist world are confronted with the question of how to treat the North Korean Government. Up to the present, the Republic of Korea has treated suggestions or acts of negotiation on any subject with the North Koreans as treason. Thus an isolation much stricter than that between West and East Germany has prevailed. For example, no trade or visits are permitted. Over a period of time, sentiment in the south favoring some relaxation may develop but this is difficult to predict.

Meanwhile, about 8 million Koreans live in the north under a Communist government. The North Korean Communist elite has often been divided into three factions: the "Yenan," "Moscow," and "indigenous" elements. This signifies the diverse background of the Korean Communist movement, and there is no doubt that factional difficulties have existed in the north, although no simple generalizations can be made. Current evidence suggests that a number of purges have taken place in party ranks, and that Russian influence in North Korea is much stronger than that of Communist China at present. Indications are that life has been rigorous in the north, but that, through human sacrifices, industrialization is being advanced.

At present, North Korea does not offer great competition to the south. As has been noted, Communist actions before and during the Korean war turned millions of Koreans against that movement. Up to this point, communism has signified neither nationalist victory, political freedom, nor higher living standards to the average Korean. And North Korean propaganda to the south has been crude and relatively ineffective, although southern propaganda to the north has not been much better.

4. U.S. POLICY IN KOREA

(a) The United States cannot discontinue economic asistance to the Republic of Korea at this time without risking the most serious economic and political repercussions. Neither the Korean people nor the Government is prepared to underwrite economic development without outside help at present. It is important now, however, to reexamine our aid program in Korea with respect to the following questions:

(1) What form of aid is most conducive to stimulating indigenous energies and capital formation?

(2) To what extent should assistance be geared to long-range plans and what should be the American responsibility for checking the validity and progress of such plans?

(3) What is the proper balance between military and economic aid, in terms of the security and welfare of Korea?

This report cannot spell out detailed answers to these questions, but it might be suggested that whatever the form and amount of aid determined most desirable, the present military expenditures of the Korean Government should be reduced. Our treaty obligations for the defense of the Republic of Korea are clear and unequivocal, and they must remain intact. With these, and the recent development in weapons, the Korean Army can safely be reduced to more manageable proportions for the Korean economy.

(b) The United States has too great a stake in the Republic of Korea, and the symbol of Korean freedom for which Americans fought and died, to permit any wholesale destruction of democratic rights without some counteraction. What can be done? First, the American people and the American Congress should be more thoroughly alerted to the facts of Korean political life. Korean leaders are presently convinced that the American people are not concerned with what happens in Korea as long as it remains anti-Communist. The American press should give far greater coverage to the Korean political scene, and more foreign correspondents should be sent to Korea to cover political events, including the forthcoming elections. Some of our public leaders should go to Korea and, while there, reiterate the fundamental requirements of a democratic society. All Koreans should be made aware of the fact that the eyes of the world and, particularly the United States, are upon them.

It should be made unequivocally clear to all Korean political groups that repeated violations of human rights or assaults upon democratic institutions in Korea will have a sharply adverse effect upon American-Korean relations. And means should be used to give this warning effect, if necessary. We have been too weak in Korea, and have not gained the respect of either the Government or the people for this fact. There are means that would be painful without being fatal which the United States could employ to support its own national interests in a situation where we bear such enormous responsibilities.

(c) On the positive side, the United States needs to encourage all types of cultural relations and scholarship pertaining to Korea. Despite our heavy involvement in Korea in recent years, American understanding of Korean society and culture is extraordinarily poor. There are no centers of Korean studies in the United States at present, and almost no American scholars primarily devoted to this area. With such weak cultural underpinnings, it is extremely difficult to build a strong political alliance. Some of the fault lies with the Republic of Korea and its representatives. Nevertheless, both the American Government and private groups and citizens should give high priority to tackling this problem.

(d) It is strongly in the interest of the United States that the Republic of Korea have increased diplomatic, cultural, and economic relations with the non-Communist world. It is especially important that relations between Korea and Japan be improved. This will not be easy, and American pressure or mediation carries obvious risks. But the problem is also critical enough to our general interests to warrant risks. One possible method of slowly bringing Korea and Japan closer together is in the context of international conferences involving other nations or people. Even more formal means can be utilized such as the contacts of oversea student and scholar groups. But the United States must also do some serious thinking about compromise solutions to current Korean-Japanese differences that might be proposed privately to the two parties by us, solutions that might involve some American commitments as well.

(e) There is no feasible method at present whereby Korea can be reunited, and two de facto Korean governments will likely continue for the foreseeable future. Ultimately, recognition of this fact will probably shape new policies, both within the Korean peninsula and outside. The United States may find it in the national interest to work for some general compromise agreement between the free and Communist worlds pertaining to divided states and their representation in international bodies.

The United States can take pride in its decision to uphold Korea against Communist aggression. It is important, however, that in the years ahead Korea remain a growing symbol of freedom, justice, and progress. This is only possible if the United States continues to make a substantial commitment, military and economic, to the Korean people. But it also depends upon Korea itself, the integrity of the political elite and the determination of the Korean people. Korea reveals both the challenge and the limits to American policy.

The Way Trujillo Nipped Plot, Why Church Joined in Battle

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Time magazine of February 29, 1960, by Thomas Dozier, associate editor of Life en Español:

THE WAY TRUJILLO NIPPED PLOT, WHY CHURCH JOINED IN BATTLE

(By Thomas Dozier)

CIUDAD TRUJILLO.—The beginning of the end in Trujilloland may well have been a warm Sunday late in January. On that date in Catholic churches all over Trujillo's island domain priests rose up and publicly read the most telling criticism of the benefactor heard by Dominicans in 30 years. Their warning resulted from the way in which Trujillo had suppressed a plot aimed at assassinating him. It was a plot which the old dictator quickly put down, but in the process he set in motion a chain of events certain to do him no good.

Trujillo's efficient and well-equipped army had easily crushed a comic-opera invasion from Cuba in June, mainly because the invasion was not coordinated with the internal opposition. In September this internal opposition, made desperate by shame and an increasingly difficult economic situation, began to stir itself. A plan was slowly and cautiously evolved. Its simple objective was to kill the benefactor. A place and a date were chosen: the annual livestock show late in December on the grounds of the 1955 International Fair of Peace and Brotherhood of the free world. Trujillo was scheduled to open the show, and the chances were that Brother Héctor, the president of the republic, along with a good sprinkling of other Trujillos, would be in attendance. Bombs would be installed everywhere the benefactor might be expected to show up.

Trujillo's omniscient and omnipresent intelligence service was probably privy to the plan, or at least its general outline, from the beginning. Shortly before the livestock fair was to open, the government announced it had been postponed until January 21. Early in December, the secret police had arrested a young Catholic seminarian on charges of possessing homemade bombs. This arrest was a tactical mistake, and a serious one.

Under the 1954 concordat with the Vatican, Trujillo agreed to special treatment for clergy and religious in his domain. Specifically, the concordat provides that no cleric may be arrested without notifying church authorities. Trujillo's cops failed to observe this requirement. When the church got wind of the seminarian's arrest, the hierarchy was outraged.

The plotters in the meantime had changed their timetable to jibe with the new dates for the livestock fair: if they could not get at the benefactor in December, they would do it in January. But the plotters appear to have lacked both a central leader and a definitive plan for assuming power. Their naiveté and inexperience is indicated by the fact they went right ahead. Nearly all of them were respectable professionals, businessmen, and students from good families; they just wanted to kill Trujillo. They had no army support. They took it for granted that with the benefactor out of the way, the army would step in to enforce order. With the army in control, they reasoned, the way would be open for more moderate forces to assume power.

These January conspirators had no connection with Dominican exiles in Cuba, Venezuela, and Puerto Rico. They were anti-Communists, anti-Castro moderates, many of them extreme political conservatives—anxious to change their country's government before any local variety of Castroism charged in to replace dictatorship with demagoguery.

But the benefactor was still too smart for them. In the dark hours of January 18, 3 days before the bombs were to go off, the khaki-colored Volkswagens of the S.I.M. (security police) buzzed into action. S.I.M. agents descended on hundreds of Dominican homes, hauled away fathers, sons, husbands, brothers—and even some wives and mothers.

Both the numbers and category of those arrested were impressive. At first, the Dominican police announced that 15 or 20 people had been jailed. Later, the government officially admitted to 123 arrests. Of the prisoners 120 were tried and sentenced to 30 years in prison. The best information in Ciudad Trujillo is that the number arrested actually totaled between 1,500 and 2,000. Among them were some very important Dominicans. They included the son of the former ambassador to Venezuela, the brother of the dean of medicine at the University of Santo Domingo, the son of the former ambassador to the Vatican, the son-in-law of the ambassador to Mexico, the son-in-law of the ambassador to Colombia, the nation's top cardiologist and the island's leading gynecologist, who had formerly been personal physician to Trujillo's daughter.

In tackling such people as these, Trujillo must indeed have been desperate, for this class of nonrevolutionary citzentry has provided the main passive support of his regime. But it was not only the quality and quantity of the people he arrested that was to haunt Trujillo; the way the arrestees were treated brought the benefactor into conflict with the most impressive enemy he had yet faced: the Catholic Church.

Trujillo was understandably irritated that so many of his former friends could join a plot to kill him and, when the benefactor is irritated, it is not a nice thing to be in his power. This time Trujillo decreed a compartively subtle form of torment for his respectable victims. Prisoners of both sexes were stripped naked, chained and thrown into common cells. A prominent woman physician was reportedly handcuffed nude to a distinguished lawyer in the same state of nakedness, to their mutual discomfort and embarrassment. The order of the day was indignity rather than the usual electrodes and the fingernail pliers, although there may have been some physical torture too.

The church found such tactics insufferable, especially as they came hard upon the earlier arrest of its seminarian. Monsignor Octavio Antonio Beras, archbishop coadjutor and active head of the church in the Dominican Republic, got together with his titular superior, aging (83), half-blind Archbishop Ricardo Pittini, who as head of the oldest see in the Western Hemisphere holds the imposing title of Primate of the Americas. The bishops of the country were summoned to Ciudad Trujillo, where they drafted one of the most outspoken pronouncements isued in modern times by the Catholic hierarchy in any country: a pastoral letter warning Trujillo to mend his way.

The letter was completed and signed on January 25, the Feast of the Conversion of St. Paul. The following Sunday it was read at all masses in all the churches of the Dominican Republic, including the 420-year-old Cathedral of Santa María la Menor, which houses the tomb of Christopher Columbus.

"We cannot remain indifferent to the grievous blow that has afflicted many Dominican homes," said the bishops. "* * * The basis and foundation of all positive law is the inviolable dignity of the human person. Each human being boasts, even before his birth, a heritage of prior and higher law than those of any state whatever." Then the hierarchy listed what the church considers the intangible and inviolable rights of man: the right of life, the right to form a family, the right to work as a means of maintaining the family, the right to commerce and the exchange of products, the right to emigrate to another country in search of better work and tranquility, the right to a good name, the rights of "freedom of conscience, of the press and of assembly."

Congregations listened intently and nervously as the bishops and priests announced an unprecedented action: "* * * We have directed in the exercise of our pastoral ministry an official letter to the highest authority of the country, so that by a program of mutual understanding, excesses can be avoided * * * tears dried, wounds healed and peace restored to so many homes." The pastoral added, with a fine twist of phrase, that the bishops were asking a special boon from God that no member of the Trujillo family "should ever experience, during his lifetime, the sufferings that afflict today the hearts of so many Dominican fathers of families, of so many children, of so many mothers and so many wives."

Within a week the text of the letter was published abroad. In the flurry that followed, the church issued a mollifying statement suggesting that the incident had been unduly emphasized. But in private the churchmen expressed their determination to oppose any further infringement of human rights.

Trujillo on his side turned the whole force of his own personality and his propaganda machine into a campaign to make it appear that everything was rosy. His newspapers published unprecedented reams of religious news; his foreign minister dashed off to Rome for a conciliatory talk with Pope John XXIII. The benefactor himself worked round the clock attending masses, funerals, church weddings, religious processions, being godfather at hundreds of baptisms. El Caribe, the leading daily of Ciudad Trujillo, blossomed with pictures of Trujillo the good Catholic.

Simultaneously, the generalissimo acquired a sudden fondness for foreign journalists. He even invited them to a luncheon at which he joked: "I am sorry I could only invite low-class people today. All the best families are in jail." When I talked with him on the Sunday following the pastoral letter he veritably bubbled over with cheerfulness, joking about stories in the United States that he had fled the country. He followed me out onto the steps of the palace to show a letter from a priest and asked, "Does this sound as if I am having trouble with the church? They still ask me for a military band."

At the same time Trujillo, wanting to cover all bets, was starting a strange double-headed campaign. Its apparent objectives were (1) to tighten his control by reassuming the presidency from his stumbling brother Héctor, or (2) failing this, to turn over the power to somebody else if the going got too rough. El Caribe printed a raft of open letters, paid advertisements, and public statements calling on the benefactor to present himself as a candidate for the presidential elections, still 2 years away. Announcement was made that on February 21 a monster rally and parade, the biggest in the history of the nation, would be held in Ciudad Trujillo to show his loyal people's wish that Trujillo would run for president.

The minister of the interior sent out letters to 80 prominent Dominicans asking them

to form parties of the opposition, presumably to run candidates against Trujillo. Yet no Dominican seemed to want to run against the benefactor. One of the daily features of El Caribe in February was a regular publication of open letters from these unhappy gentlemen, each in turn protesting: "Who, me?"

There are good reasons to believe that Trujillo may really be trying to find a graceful way to retire—that is, get out. Close associates say he is haunted by the vision of sitting in some refuge like Liberia, Spain, or Madeira and reading stories of how an infuriated populace eradicated every memory of the caudillo who imposed his name and personality so forecfully upon them for 30 years. Trujillo hates the thought of going down in history as just another repudiated tyrant. He would like at least some of the 2,000 statues erected to him in the Republic to remain intact. He would like to be remembered for the good things he has done for his small country—and he has done much in the way of physical improvement—rather than for the enslavement of his people. As a result, he was probably serious when he assured a visiting U.S. Senator that he would like to hold free elections and would accept outside observers to guarantee their fairness.

The question remains whether it is not too late for peaceful exits. Cuba's Batista wanted to get out gracefully, too; but he never figured out how to do it. Trujillo has now infuriated a large group of influential Dominicans. He has antagonized the Catholic Church. If he pardons those whom he has imprisoned and tries to conciliate the church, he seems to be leading from weakness. But if he keeps everybody in jail and continues to harass the church he nourishes the bitterness and enmity that inevitably will destroy him. He is damned if he does and damned if he does not.

The best guess holds that Trujillo has about 3 months to adopt a positive course of action. Dominican sources who accurately predicted the January coup 4 months before it happened are now saying that a new plot is being hatched for June. This time, they say, the internal opposition, which so far has operated without help from the outside, will get together with other hemisphere forces dedicated to the overthrow of the benefactor. Next time, who knows? As one bishop remarked ominously, "It may soon be time for martyrs."

Wrecking an Industry

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an enlightening article which appeared in the American Legion magazine for March 1960:

WRECKING AN INDUSTRY
(By George H. Waltz, Jr.)

No one doubts that the first victories in another large-scale war—if it comes—will be won by missiles, short-range, intermediate range, and intercontinental. Some will be launched from land bases, some from high-speed airplanes, and some from nuclear submarines. Billions of dollars are being spent by the U.S. Government to develop and stockpile this deadly kind of nuclear armament.

However, although a single missile may be capable of destroying an entire city, few top military experts feel that missiles alone will win a war. In a statement made before the Senate Armed Services Committee on April 30, 1959, General Lemnitzer, the Army Chief of Staff, said: "In my opinion, the introduction of the new [nuclear era] weapons in no way diminishes the role of the ground soldier." Most military men recognize the fact that it will be the foot soldier—the old-fashioned "doughfoot" rigged out in new-fashioned gear including new lightweight, rapid-fire rifles—who will have to move in to hold the ground leveled by a missile attack. And if such a war ever does come, the military and the American people will expect those soldiers' rifles and automatic weapons to be the most modern, the latest in combat arms. They will expect such old-line arms manufacturers as Remington, Winchester, Savage, Marlin, High Standard, and others to be fully geared for a quick switch from the manufacture of sporting arms to military weapons. In past wars there has been a sufficient time lag to allow for research and development, retooling, and production. In a nuclear war there will be no time lag.

Unfortunately (and you can put emphasis on that word), the American people and many Government officials seem to be doing their best—either intentionally or unintentionally; it makes little difference—to throttle the American manufacturers of conventional ordnance, the very manufacturers who have come to our rescue when our national security was threatened. A fine old American industry, one that pioneered in the use of interchangeable parts, is slowly being forced out of business by three forms of harassment, official and otherwise.

As a result, the industry has already lost about one-third of its skilled arms production employees because of layoffs and shutdowns due to dwindling sales. The industry's profits after taxes in 1958 were 99 percent lower than they were in 1956.

Why are sales dwindling?

There are a number of reasons—none the fault of the industry. The most important factor is the unlimited importation of outmoded, surplus foreign military rifles and handguns. Since 1956 the importation of junked military rifles from England, Italy, South America, Austria, Sweden, Norway, and Israel has climbed steadily each year. Imports of surplus weapons increased 20 times between 1955 and 1958. During the same period, domestic gun sales fell off 50 percent. It is a simple case of foreign governments unloading their no-longer-adequate military arms on the American market without import limitations and without even an equitable import duty.

On November 10, 1959, the President of Costa Rica, Mario Enchandi Jimenez, announced that that country was sending all of its surplus arms to the United States in exchange for tractors—with old Uncle Sam playing the role of the man who is beating weapons into plowshares for a foreign country. According to a news story that appeared in the New York Times on November 12, 1959, President Jimenez emphasized that the arms were to be delivered to the dockside in the United States. "Whatever happens to them after that will be the U.S. business," said President Jimenez.

Because of the low cost and low import duty—the average duty on a foreign surplus military rifle is $1.19—these outmoded, antiquated military guns can be sold here for as little as $10.88 in sports shops, department stores, and by mail-order houses, most of them Johnny-come-latelys to the gun business. In the first 8 months of 1959, according to the U.S. Department of Commerce, 123,676 foreign surplus military rifles were imported into this country. In 1958 a total of 172,000 old rifles were imported. When the final total is in for 1959, it will probably top 200,000.

In many cases these rifles cost the importers as little as 82 cents each. Add the average import duty of $1.19 and a few dollars for shipping charges, and you come up with a cost price that yields a handsome profit even at the low sales price of $10.88. Some foreign surplus military imports go for as much as $49.50.

With such a margin of markup, the importers have plenty of change to spare for advertisements in newspapers and magazines. The rifles that they advertised, although no longer considered suitable for foreign soldiers, are being foisted on the American public at prices that yield a tremendous profit for the importer. In addition, these prices are far below the cost of American-made, precision-built sporting rifles. Yet if you went deer hunting last year, you know that the woods were full of British Enfields, Swedish carbines, Italian carbines, Norwegian Krags, Belgian Mausers, and other foreign military what-nots.

Sure, they'll shoot, and that is about all a certain type of hunter cares about. However, they are military rifles. Many of them are crude. All have been used under hard service for a good many years, which means that their stocks and barrels are not things of beauty or fine workmanship. Many may be unsafe. None, although some importers try to doll up their foreign military merchandise with so-called sporting stocks (at extra cost to the buyer), are really hunting rifles. But, thanks to low import duties and no import limitations, the price tags are low. Thousands of Carcano carbines, 7.35-millimeter Italian-made army weapons, have been sold in the United States for as little as $14.88 each. Retail prices of American centerfire rifles range from $80 to $130, but these rifles are designed and built for hunting. American rifle manufacturers, harassed by uncontrolled foreign competition, must pay high wages to the skilled arms makers they employ. How can they compete? The answer is that they can't.

The markup that gives the firearms dealer his profit on an American-made rifle is infinitesimal when compared to the profit margin provided by the sale of an old surplus military gun. As a result, the gun dealer or sports shop handling American rifles as well as foreign surplus ones is able to make more on the latter even though it sells for less. And if his primary concern is making a fast buck, he probably will push the foreign military rifle.

This bonanza for the importers and some dealers has, oddly enough, been made possible by the kindliness of Uncle Sam—kindliness not directed toward the American small arms industry. Most of the military rifles that are being dumped on our market by the hundreds of thousands are obsolete weapons that have been, or are being, replaced by more modern weapons, whose cost in many cases is being underwritten by Uncle Sugar's foreign aid program. Foreign aid is fine when it is applied to underdeveloped countries, but when it plays a part in destroying an old American industry—an industry involved in our national security—it should be scanned carefully.

Just recently I saw a British Enfield that had been bought for about $15 at one of New York's largest department stores. Close examination showed the Savage imprint and the words "Property of the U.S." stamped on its barrel. Yet it had arrived in this country as an uncontrolled import and had been sold at a handsome profit to an American who, through taxes, had already paid for the rifle by helping to foot the tab for lend-lease—which turned out to be more give than lend or lease.

The American arms manufacturers have tried to stem this wholesale flood of war

surplus imports, but so far they have met with little success, in spite of the fact that they form the essential backbone of our military arms production. First, they approached the State Department, but received little help.

Last June they turned to the Government's Director of Civil and Defense Mobilization for relief. In their petition they pointed out that the industry is all important to the national security and asked that the importation of surplus military rifles be limited to the average quantity imported annually during the period from 1945 to 1955—about 5,000 guns a year.

This could be done under section 8 of the Trade Extension Act, which was designed to prevent excessive imports from impairing the ability of American industries to meet their mobilization assignments with a minimum of lead time. Unless it is done, according to our principal arms makers, "the domestic firearms industry cannot maintain its economic strength in the face of the present level of imports of surplus military rifles." They also maintained that unless some limitations are placed on the sale of foreign surplus arms, the industry will lose the nucleus of skilled arms experts who will be so necessary to an all-out effort to produce military arms, and it will be unable to carry out the research and development necessary to produce such military arms.

To plead their case, such importers of surplus military rifles as Interarmco, Ltd., of Alexandria, Va., and the Golden State Arms Corp. of Pasadena, Calif.—two of the largest—have organized the American Council for Technical Products. Their bland claims, as reported in the Wall Street Journal, center on the following:

First, that the Army Ordnance Corps carries on most small arms development and manufacture at its Springfield, Mass., armory. The actual facts: For the production of the new M–14 rifle, two arms manufacturers have been awarded contracts to produce 35,000 rifles each. The Springfield armory has a contract to produce 15,000.

Their second claim is that more than half of the surplus foreign military rifles sold go into gun collections or are hung over fireplaces as decorations. In this respect, so the importers claim, they are not in direct competition with American sporting rifle manufacturers.

However, the importers' own advertising and the advertising of the dealers, department stores, and mail-order houses handling their beaten-up foreign wares belie their claim. Most newspaper and magazine ads are illustrated with drawings of men and boys togged out in hunting gear. Even the copy in most cases is written to snare would-be hunters. The copy in a recent advertisement placed in the Wall Street Journal by the Golden State Arms Corp. starts off this way: "Deer hunters, we have at last received a shipment of the rare and prized British Enfield special carbine No. 5, designed specifically for use in the jungle and rain forest."

This is an "over the mantel" gun?

An ad in the New York Daily News, placed by Abraham & Straus, one of Brooklyn's largest department stores, reads: "Preseason hunting event. British Royal 303 Enfield sniper rifle with a 90-day new-gun guarantee."

Do over-the-mantel guns used for decorative purposes need a 90-day new-gun guarantee?

The headline of still another such ad, this one placed in the New York Herald-Tribune by the Hunter's Lodge of Alexandria, Va., read: "Happy hunting * * * a la Italiana." The copy describes a war surplus Italian Carcano carbine.

Just how many Americans would buy an Italian Carcano carbine to hang over their mantel? The company's very name—Hunter's Lodge—gives the pitch. It is after the hunter's trade—the country's largest market for guns.

The American small-arms industry is also feeling a squeeze from the importation of new shotguns and sporting rifles made in Italy and other foreign countries. Because of low labor costs and low import duties, shotguns and rifles with hand-engraved barrels and finely grained and handworked stocks can be placed on the American gun dealer's racks at a fraction of the cost of a domestic gun. One gun dealer showed me a single-shot shotgun that he can sell for less than $40. It was engraved and had a beautiful stock. I asked him why he handled them. His reply: "Frankly, they arrive 'broken' and I have a devil of a time assembling them; but they sell because of their 'ornamentation' and comparative low price. If I didn't carry them, the fellow down the street would."

Cutthroat competition from the unlimited importation of both surplus and new weapons would be to hog-tie the American arms industry. But it also has other troubles. Now the industry is being plagued in a subtler, but just as damaging, way by various groups of do-gooders and pantywaisted men and women who feel that the main solution of the problems of crime and juvenile delinquency is just a simple matter of passing a law. They usually suggest either a law that would ban the sale of rifles, shotguns, or handguns to anyone but certain Government officials and the police forces, or a law that would require citizens to obtain licenses or permits to own and use a rifle or a shotgun and to buy ammunition.

Unfortunately, such a law has never cut down the incidence of crime (New York State is a good example of this fact). All it does is prevent the average law-abiding citizen from obtaining a gun, or make it difficult for him to do so. Criminals, on the other hand, are able to buy handguns from under-the-counter sources.

These groups would like to repeal the second amendment to the Constitution, which provides that "the right of the people to keep and bear arms shall not be infringed."

One of the first things that a dictator does when he comes to power is to require the registration of all arms. The next step is the confiscation of all arms. This gives him and his police-state government the assurance that the people will have no weapons to use in revolt.

Last July McCall's magazine joined the ranks of the do-gooders who feel that you can outlaw crime by passing a law. In an article entitled "This Very Day a Gun May Kill You" they fell into step with the anti-rifle, antishotgun, and antihandgun parade. The author, presumably backed by the editors, blamed the sale of arms to law-abiding citizens for many things, including juvenile delinquency, suicides, and crime.

What the article failed to point out was that this very day you stand a much better chance of being killed by an automobile, a mugger with only two bare hands for weapons, or by a garrison belt-slinging teenager than by a gun.

If we were to outlaw the use of all things that killed, we'd be without automobiles, belts, pieces of rope, lengths of heavy chain, umbrellas, icepicks, pocketknives, and bathtubs. Many people are killed every year by a combination of a lost piece of soap and a bathtub.

In the best tradition of the McCall's approach to life, the author deplored the way in which perfectly normal and well-adjusted juveniles became killers once they laid hands on firearms. In the grimmest details, the article told how these youngsters burst the bonds of togetherness by grabbing daddy's rifle or uncle's shotgun and mowing down other members of the family. What McCall's neglected to point out was that these maladjusted children could have used a leadpipe, a kitchen knife, or a bottle of salad oil to vent their childish petulance.

The McCall's article quoted numbers from the National Office of Vital Statistics to show that in 1956 over 14,000 Americans were killed by guns.

However, the statistics were used slightly out of context. The National Office of Vital Statistics report for that year shows that of the 14,220 (if you want to be exact about numbers, which McCall's was not) killed, 7,841 were suicides by firearms or explosives, 4,010 were assault victims by firearms or explosives, and 2,369 resulted from accident by firearms. Actually, the only one of these figures that really counts is the 4,010—the number of people who were assault victims of firearms or explosives. A man or woman intent on suicide can resort to gas, a knife, or the muffler of the family car. He doesn't need a gun.

In point of fact more people, many more than the 2,369 listed as gun fatalities, die right in their own homes—homes without firearms—each year. And these deaths are caused by falling downstairs, slipping on ice, slipping in the bathtub, or tripping over a child's toy, etc. If we are to follow the lead of the editors of McCall's, perhaps we should outlaw stairs and children's playthings.

When you begin to think about it, the whole idea becomes ridiculous. However, this didn't prevent George Gallup of the American Institute of Public Opinion in Princeton, N.J., from conducting one of his famous polls on this subject. Oddly enough, his poll, too, came up with the 14,000 "killed by firearms" figure. And he—like the McCall's article—failed to break down the figures to show the percentages or numbers who were suicides or who were killed by explosives. Letters written to Dr. Gallup by sportsmen questioning the figures used in his poll were, for the most part, unanswered.

Perhaps the best answer to Dr. Gallup, McCall's, and others we have referred to was presented in an editorial that appeared in a recent issue of the magazine Law and Order, published by the National Police Officers Association of America. It was written by the association's president, Frank J. Schira, and it said:

"Without appearing to sit on a fence we feel that an American citizen of voting age and of good character should have the right to purchase without restriction a handgun, rifle, or shotgun or a like item without interference by a Government body * * *. Let's not tie redtape around the hammer of the handgun and restrict good men and women from owning firearms." The president of the National Police Officers Association of America should know what he is talking about.

In the event of war, we are going to need our small arms industry. Let's not kill it with unfair foreign competition. And let's not kill it with laws that require the honest citizen to get all sorts of permits and licenses in order to own a gun for hunting or target shooting or home protection.

Most industries are protected by import limitations. Why not the American arms industry?

Democrats and Defense

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the Chicago

Daily Calumet, a community newspaper in my district, is, I believe, a most interesting commentary on a subject of great concern to us all:

DEMOCRATS AND DEFENSE

Democratic hopefuls seeking the presidential nomination look a little foolish when they in unison go out calling for increased armaments against the Soviet threat and at the same time call loudly for suspension of nuclear tests.

It is these same candidates who are obsessed with the notions that war is unthinkable, that reason will triumph, that our differences with the Communists are negotiable, that Khrushchev needs peace, that coexistence is the prerequisite to survival.

If all these assertions are true and their reasoning logical, why then should we be so worried about a timelag in the missile race of a year or two?

We Need Heart Research

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Post-Gazette of February 23, 1960:

BIRTHDAYS MAKE HEART GLOW, SCIENTISTS FIND—AGE PIGMENTS ACCUMULATE IN LIVING CELLS AND SHINE UNDER ULTRAVIOLET LIGHT

CHICAGO.—Birthdays truly make your heart glow.

The older you get, the more your heart actually will shine or fluoresce if exposed to ultraviolet or black light.

It shines more because more age pigment accumulates in living cells of the heart. This pigment is a strange and perhaps very significant fact in the puzzle of why and how we grow old and die.

The pigment shines with a kind of orange light when the heart is inspected with ultraviolet light.

The age pigment concentrating in human hearts, nerves, brains, and muscles is being investigated for clues to aging.

INCREASES WITH AGE

The story is told in an exhibit to the American Association for the Advancement of Science.

Children up to about age 10 apparently have none of the age pigments in their hearts, autopsy studies show.

But the amount increases in proportion to age thereafter, scientists of the gerontology branch, National Heart Institute, and Baltimore City Hospitals find.

In persons of advanced age, perhaps 20 percent of the heart is made up of the age pigment, which is relatively inactive and seemingly useless.

REPLACES SOME TISSUE

But it is replacing some of the contractile tissue of the heart cells. A big question is whether this is connected with the higher death rates that come with age.

The age pigment was first noticed many years ago. Main goals now are in trying to isolate and identfy it, and determine what it means.

Where the pigment comes from and why are also still unknown. It doesn't seem to be correlated with heart failure, or any particular disease.

The research team includes Drs. Berhard Strehler, Albert S. Mildvan, Donald Mark (now in Peoria, Ill.), Daniel Hendley, and Irwin Konigsberg.

Bank of England Stops Supporting Market for Government Bonds

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, February 26, 1960

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the attached editorial from the Wall Street Journal of February 26, 1960, entitled "Bank of England Stops Supporting Market for Government Bonds."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BANK OF ENGLAND STOPS SUPPORTING MARKET FOR GOVERNMENT BONDS—ACTION IS AIMED AT RESTRAINING BRITISH BONDS FROM FINANCING INFLATIONARY SPENDING

LONDON.—The Bank of England, for the first time in many years, withdrew its market support for British Government bonds, in a Government move to restrain banks in the United Kingdom from financing inflationary spending.

Banks have been selling bonds in large amounts on the open market to raise money for increased loans to customers. Such sales in recent weeks have been estimated at 80 million pounds sterling, equivalent to $224 million.

Until now the Bank of England, anxious not to disturb investors' confidence in government securities, has absorbed these offerings by making purchases at prices considered necessary to maintain a favorable market.

That policy ended late Wednesday, when the Bank of England decided to call a halt to the commercial banks' unloading and discontinued its support buying.

The immediate effect was to send gilt-edged issues tumbling, and the slide continued yesterday, with losses ranging as high as $3.

One financial authority said the Bank of England's move represented "the British Government's firmest disinflationary action since the bank rate was raised to 7 percent in September 1957." Later reductions cut the bank rate to 4 percent, but last month it was moved back up to 5 percent.

The bank rate is the fee the Bank of England charges on credit extended to other lending institutions.

"With price trends uncertain in the absence of Government support, it is unlikely the banks will now indulge in any heavy selling of their remaining gilt-edged securities," one market dealer noted.

The Government action was viewed as a roundabout way of restricting consumer credit without resorting to a further bank rate move or imposing direct controls on installment buying.

The action of withdrawing Government support for gilt-edged bonds in the market hit industrial bond prices as well as Government bonds. In spite of late rallying attempts, the list finished widely lower yesterday. With losses running to the equivalent of a dollar or so.

The Bank of England normally buys and sells gilt-edged bonds in the market to smooth out violent price fluctuations. When such buying develops into inflationary support of the market against heavy selling by commercial banks, the central bank pulls out the stop—a point which apparently has now been reached.

For many months banks have been lending freely to their customers. Reasons listed for the rising credit demand include: Booming trade and increased industrial output, which mean larger inventories of goods to be carried and financed; capital expansions, frequently financed at the start by bank loans in anticipation of later permanent arrangements; increased personal spending, partly in connection with installment buying of automobiles, houses, and appliances; heavy tax payments at this season by companies and individuals.

If the Government's latest action to trim back spending regarded as inflationary fails, further moves are expected. One suggestion is that the new and yet untried device of the special deposit might be introduced. This would be an order by the Bank of England to banks to deposit with it a certain proportion of their cash resources. Money so locked up could not be used for advances to customers.

Such a rule would be similar in a general way to the reserve requirements of U.S. law, under which commercial banks must keep specified portions of their deposits in cash at Federal Reserve banks.

Official quarters indicate there is no immediate intention or need to introduce the special deposit plan or to resort to direct restrictions on installment sales. However, Government sources say they're determined to nip in the bud any new inflationary tendency; one sign of that attitude was the recent hike in the bank rate to 5 percent.

Poll Payola

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Reading (Pa.) New Era:

POLL PAYOLA

Are public opinion polls a subtle form of "payola"?

This question is not as remote as it may seem. One of the gimmicks utilized in the record business was to create phony "polls" and thereby manipulate the popularity of certain recording artists and spur the sale of records.

If it worked in the comparatively unimportant business of rock and roll, perhaps it will function with even more devastating results in the field of economics and politics.

And if it was "payola" for disk jockeys to artificially stimulate the demand and popularity of certain records, isn't it even more "payola" when a public opinion poll keeps saying over and over again that NIXON is a virtual shoo-in for President?

Private soundings of public temperament may be valid on the grounds they are kept confidential and are the property of those footing the bill. But polls taken for the obvious purpose of influencing, rather than tabulating, public opinion most definitely are guilty of "payola."

We'd like to see a congressional investigation of the politakers in America. It is difficult for us to really believe that the questioning of 2,000 or 3,000 people out of nearly 200 million is a basis for predicting how people will vote.

Samuel Grafton, author and columnist writing in Sunday's New York Times, points out that many an important debate, such as the famous Lincoln-Douglass exchanges would never have taken place if a poll taker had resolved the issue in advance. He cited Rockefeller's withdrawal from the GOP presidential race because of polls as a disservice to American democracy.

Harry Truman proved that a stirring campaign, raising issues and debating them forcefully, can prove the politakers all wet.

When you realize that in the past over 90 percent of the newspapers editorially backed the Republican candidate for President, it's easy to understand how a combination of big business, big money, big press, and big polls can go a long way down the payola road to elect the Nation's No. 1 officeholder.

Senator Vance Hartke Discusses the Unemployment Problem on "The American Forum of the Air"

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. BRADEMAS. Mr. Speaker, during the first week of December 1959, the U.S. Senate Special Committee on Unemployment Problems conducted hearings in four Indiana cities. One of these was the city of La Porte in my own congressional district. The La Porte community has suffered substantial and persistent unemployment in recent years.

The chairman of the Senate committee hearings in Indiana was the distinguished junior Senator from our State, the Honorable R. VANCE HARTKE, who has himself shown a deep interest in attacking the problem of unemployment. Senator HARTKE's able and informed questioning of the many witnesses who testified at this grassroots hearing in La Porte made the visit of the Senate committee to La Porte County unusually valuable and productive.

I am pleased, Mr. Speaker, to include in the CONGRESSIONAL RECORD the transcript of "The American Forum of the Air" broadcast of December 1, 1959, on the topic, "How Serious Is the Unemployment Problem?"

Both Senator HARTKE and Dr. Clarence Long, professor of economics at Johns Hopkins University, participated in the discussion. The proceedings follow:

HOW SERIOUS IS THE UNEMPLOYMENT PROBLEM?

(Senator VANCE HARTKE, Democrat, of Indiana, and Dr. Clarence Long, professor of economics, Johns Hopkins University; Jim Snyder, moderator)

Mr. SNYDER. This is the "American Forum of the Air," produced by the Westinghouse Broadcasting Co. in association with Theodore Granik.

Our guests are Senator VANCE HARTKE, Democrat, of Indiana, and Dr. Clarence Long, professor of economics at Johns Hopkins University.

They will discuss "The Unemployment Problem."

When Labor Secretary James Mitchell "ate his hat" a few weeks ago it was one more indication that despite the booming American economy over 3 million people are unemployed. Opinions vary widely on the seriousness of the problem and how it can be solved.

We are pleased to have as our guests on the "American Forum" Senator VANCE HARTKE, of Indiana, who is a member of the Senate Special Committee on Unemployment Problems, and Dr. Clarence Long, professor of economics at Johns Hopkins University.

Senator HARTKE, let's begin by discussing the causes of unemployment.

Now Dr. Long has testified before your committee that unemployment is caused by excessive labor turnover, poor business management, lack of community organizations in depressed areas, and stubborn and shortsighted labor leadership. Do you agree with Dr. Long?

Senator HARTKE. Well, those are some pretty general terms. We have to come back to some specifics. I think possibly we have to take this in the context in which Dr. Long was talking about.

The important thing to me about unemployment is that this is something which deals with human beings. It is something that cannot be dealt with in statistics alone. When you have a man out of work and he has a family to support it is a problem, and when we have this situation multiplied better than 3 million times in the United States, it is more than a problem. And the important thing to the public is that they have to pay in one way or another for these people. They have to pay for them either in unemployment compensation checks, they have to pay for them in welfare assistance or they will have to pay for them in local relief or in charitable donation or otherwise they pay for them in the way which is most inhuman of all, and that is suffering, and this to me is why we must seek the solutions to some of these problems.

Mr. SNYDER. Well, what about the causes of unemployment?

Senator HARTKE. There are a number of causes, of course, but the biggest thing is that you must have an economy which is capable of absorbing a number of potential individual situations. One of them is the supply of labor which is available. This means that it must be qualified and capable of doing the jobs which are required. It doesn't do any good to have a typist apply for a job doing welding. The typist can't weld. Nor can the welder type, and this presents one problem. The other situation, another one of the situations is the case where you have people at work in factory levels, or in the production of goods, and this number of people is not increasing in the Nation's overall economy. It is really at about the same level numerically as it was in about 1919, so we have to find another area where people can go to work.

So to find an answer to this means really finding an answer to our overall economic problem. Involved in this is the one big one which is coming to the front now, and is nothing more than what we have had before, what we call automation. This is the increased productivity of a human being as a result of using intelligent machines or intelligent methods of doing things.

Mr. SNYDER. Dr. Long, do you agree with the Senator on this or do you still feel as you did before you testified before his committee?

Dr. LONG. Well, I certainly agree with a great many things that the Senator has said. I think that one of the interesting things about the behavior of our employment and unemployment problem over the last 13 years is that it presents us with something of a paradox. On the one hand the economy has shown that it has amazing ability to create jobs for enormous numbers of people. We have actually now employed about 8 million more people than about 13 years ago, and all during that time there have been enormous releases of people because of increases in efficiency, so we have absorbed a great increase in the labor force and offset this great increase in technological technology.

At the same time throughout this period we have always continued to have something like about 4 percent of our labor force unemployed. Only briefly, and that was during the Korean war, has it gone below 4 percent. That means somewhere around 3 million unemployed, and I think we have to ask ourselves what is the nature of our unemployment problem, is it a recession unemployment problem or is it a typical or normal peacetime unemployment problem?

And when you examine the total contribution of recession unemployment to the total unemployment problem we have had over those years, you will find that five-sixths of all of our unemployment has been the kind of unemployment that persists even during what we think of as prosperity.

Senator HARTKE. I think that is right, Dr. Long, and this is the problem because now we are talking about so-called increased prosperity in the event that the steel strike is settled, and we don't know about that. If it isn't, of course, this is going to be multiplied and be upon us much quicker than before. Many economists, as you well know, predict a recession in 1961, and this is nothing new, but the point that worries me is when you add to this normal drop of 3-million-plus, these people in recession times, we have something which could be a potential threat not alone to our economic future but to our political future as well. The point that really worries me, and I find in many of these cases we talk about are our educational facilities—you come from an educational institution—I find people who are not educated to do a job.

I was in the hearings with West Virginia and an old man 33 years of age told me, he said, "I'm too old to get a job, but I am too young to claim my old age pension and all I know is coal mining and I don't know anything else."

Dr. LONG. Well, I agree with you. If you take a look at the unemployed you will find they have certain characteristics. One, they are apt to be rather young. There is an awful lot of unemployment among the young people. There is an awful lot of unemployment among colored people. There is a lot of unemployment among the older people. Actually the older people tend to be unemployed for longer periods. There is a good deal of unemployment among people in certain localities and in the case of your unskilled labor, your manual worker, the people in manufacturing and mining and construction, in these industries, you have heavy concentrations of unemployment. And following Senator HARTKE's statement, you have your greatest problem of unemployment among the uneducated people.

Mr. SNYDER. Where does your charge of shortsighted labor leadership apply to these problems?

Dr. LONG. Well, that is only one factor involved here. I wouldn't think that shortsighted labor leadership was the principal factor involved here. I only mention it as one. I think certainly the type of leadership that overprices labor, insists on getting a wage which is greater than what the market can absorb at any particular time, the type of leadership which insists on inflicting outmoded methods of production in the shortsighted effort to preserve a job for a certain period, this raises the costs of labor so high that in many cases people can't afford to buy it, and the workers stay unemployed.

Senator HARTKE. Dr. Long, let me interrupt you for a moment. I don't want to disagree with you, but I would like to pose a question to you in this regard: We talk about shortsighted labor leaders in these regards. Now primarily their responsibility is to their membership as I understand the concept of American economics, and their job is to provide two things for them as far as they are concerned. That is an adequate wage under good working conditions, and if they do this of course then they are serving a useful function in society.

However, whenever you talk about overpricing the labor in a community, how can they overprice themselves whenever they have to deal on a competitive basis with industry?

Dr. LONG. The overpricing consists of adhering to a certain stubborn wage policy which makes it very difficult for the businessman to hire that labor, to cover the costs in the price he charges and sell enough of it to employ all the workers.

I agree with you the labor leader's job is to represent his workers, but he doesn't represent them if he tries to get such a high price or tries to inflict such practices that the workers don't get jobs. I mean only insofar as the worker has a job does his higher wage help him. If the higher wage prices him out of the market, then the worker is not helped, he is hurt by it.

Senator HARTKE. I agree with that. It doesn't make any difference what his pay per hour is, if he doesn't work any hours, that is what you are saying.

Dr. LONG. Yes.

Senator HARTKE. In the coal mining industry, and I was born in the heart of the coal mining area of southern Indiana, we have a situation which makes me wonder, though, about this type of situation. Here are labor leaders who according to industry and labor alike, and even the economists, have contended that they have not stopped automation which of course is the normal process of reducing the labor force. They do have a high labor-wage-scale. They have improved their working conditions tremendously. And yet today in this particular industry they are able to take this coal, mine it in the United States, ship it overseas and deliver it on the banks of the Rhine cheaper and less expensively and at less money than the Germans can mine their own coal and at less price in spite of the fact that the miners in Germany are receiving less money than our people.

Now this is one of the hard hit groups of people in the United States today, and this makes me wonder whether there can be any real charge as to whether it can be laid at the doorstep of so-called labor leaders.

Dr. LONG. I hope I didn't give the impression that I lay this whole problem, Senator HARTKE, at the doorstep of labor leaders.

Senator HARTKE. No, I don't think you did, I honestly don't. I understand that.

Dr. LONG. I started out by saying that it is only one contributing factor. There are a great many other factors. As I say one of the major factors is the nature of the unemployed person himself. In many cases—I think in a bulk of the cases, he doesn't have enough to offer the employer to justify his employment. Consequently, he either doesn't get a job or if he gets it, he loses it and if he loses it, he has a hard time getting another job.

You will find that something like half of all the unemployed suffer something like 85 to 90 percent of all the unemployment in the sense that unemployment keeps coming back to this group all the time.

Senator HARTKE. And we recognize that. Like you mentioned before, certain categories suffer worse than others, and of course with the Negro, he suffers in this. In other words, his problem is not a question maybe so much of civil rights as it is a question of economic rights for the Negro and maybe he would have his civil rights.

Dr. LONG. Precisely.

Now when I say it lies within the worker himself, I don't mean it is always the worker's fault. Obviously if a colored man can't get a job, it is not his fault that he is colored, and we can't change this situation, but what we have to do here is to eliminate the obstacles to the employment of colored people.

Senator HARTKE. The prejudice.

Dr. LONG. Yes, and the prejudice against the employment of older people.

Mr. SNYDER. How large a factor do you think prejudice against the Negro is in employment policies?

Dr. LONG. I think it is quite an important factor in this respect, that the great expansions in the demand for labor are occurring in white collar and service occupations. You will find most colored people are employed in manual occupations. In factory occupations. These are the areas which, as Senator HARTKE points out, are not expanding. Consequently, if there is prejudice against employing a colored person in an office, at a typewriter or doing clerical work or supervisory work, then he is cut off from an important type of demand for his services.

Senator HARTKE. I think that is right.

Let me ask you this, though, in regard to that: Do you feel there is anything being done on an educational level to help in this regard? To me, I think one of the biggest solutions is a real bona fide educational basis, and I am not talking about the three R's now, although I believe in them and have children of my own who are concerned with that, but I am talking about educating people so that they can find their places in society, their little niche in society.

Do you feel that our educational system is geared to do that today?

Dr. LONG. Do you mean are we talking about the colored person now, or are we talking about the larger problem——

Senator HARTKE. I think it will apply to both, but I am particularly interested in the Negroes and whether or not there is any attempt being made to bring them to the place where they will be more acceptable as far as this type of work is concerned.

Dr. LONG. Well, I certainly see efforts, because I see and I think you see colored people doing jobs that 10 or 20 years ago would have been unthinkable. There are all sorts of occupations that have been opening up, but we all know that the pace is very slow and sometimes the problem lies with the fellow workers. Often the employer is willing to hire them, but he finds a great deal of friction in the office so it really gets down to the problem of the prejudices of the individual person and that is of course not easy to deal with.

Senator HARTKE. Dr. Long, this is something that bothers me along the same line. Do you have any particular answer—and I haven't gotten an answer to this—as to why unemployment is so much lower in—take Western Germany and England and France and Belgium and in Sweden, percentagewise, than it is in the United States?

Dr. LONG. Well, I think there are a number of reasons. One thing of course, America is a great continent with very large turnover population. People are moving all the time, changing jobs. A far more dynamic country, and the sheer amount of turnover unemployment I think is greater in this country.

Senator HARTKE. May I stop you for a moment there?

Dr. LONG. Yes.

Senator HARTKE. This bothers me. This dynamic society which is constantly moving around and then at the same time is ending up in second place. This is what gets my goat lately. Here we are, we are in second place as far as missiles are concerned, we are in second place now as far as exporting automobiles—Western Germany has gone ahead of us in the exporting of automobiles—here we have come from a nation which was—this dynamic, mobile labor population—and constantly instead of moving ahead and progressing as we should be, we are progressing and getting a better way of life, but not with the rapidity at which a lot of people would like to see us go.

Dr. LONG. Of course we are a very proud people and we want to be first in everything. It is not very likely that one country is going to be first in everything. Of course in the case of our automobiles, we have produced an automobile which is geared to the American market, and the American price of gasoline, and it is not easy to produce the kind of automobile which the rest of the world wants which happens to be a very small car, so to some extent we are bound to fall behind in that respect.

So far as missiles are concerned, I suspect that we don't lack the intelligence or the ability to produce missiles. It is simply a matter of budgeting. The people who are in charge of budgeting sums of money and planning this a number of years ago didn't think it was important enough.

Mr. SNYDER. I think Senator HARTKE is moving into the area of his disagreement with the Eisenhower administration on certain things.

Dr. LONG. I agree with him profoundly on that one.

Mr. SNYDER. One thing that comes to mind is the problem in depressed areas. What is your feeling on depressed areas, Senator? What do you think should be done about these pockets of unemployment around the country?

Senator HARTKE. Well, we all know they exist, and to recognize they exist and admit it is very important.

The second thing that is very important to me is the fact that right today as yet there is no place in which there is a labor shortage. In other words, there is no metropolitan area which really has an excess of demand for labor over what they can give. They can in certain fields. But in these certain areas where you have for long terms of years a large number of people unemployed, you have seen a changing economy with no one giving enough thought and enough planning on a national level in my opinion as to how you are going to move these people over into a productive way of life and once you have a family which has its roots into a community, you don't move them. You don't say, "Look, you go over to Los Angeles and get a job."

Maybe he doesn't want to go to Los Angeles. He likes it where he is. This presents a sociological as well as economic problem. So it means that you have to have national planning.

I think most local communities in my opinion do not have the finances nor do they have enough of the planning experts and I am talking about people who can really think these problems through—I don't think they have them. Now they may be proud enough to say, "We do," but I think if they will examine their own problems just as we did in one place in Pennsylvania, they will finally come up with the stark realization that they don't have enough money to hire the type of people who can come up with the correct solutions of using these people once they have been taken away from their regular source of employment.

Mr. SNYDER. Well, now in the last session of Congress the Eisenhower administration was willing to appropriate $53 million, I believe, was the figure, for depressed areas aid. The Douglas-Clark bill, the Democratic bill, wanted over $300 million. I assume you were in favor of the larger figure.

Senator HARTKE. As far as I am concerned, $300 million, if you could solve the depressed

areas problem by spending $300 million in Federal money—now I don't say it would solve it, but if you could solve it for that amount of money, the money that the Federal Government would get back in taxes from these people being put to work would come back, I would say, a thousandfold. I mean this is the shortsightedness of spending money. Sometimes you know you can be penny wise and pound foolish in some of these programs. I don't say this would get an answer, but it is high time we get an answer because the depressed area continues to be a blight not only on the area in which it is located but upon the Nation.

Mr. SNYDER. Dr. Long, as a man who didn't have to vote on these depressed areas bills, do you agree with Senator HARTKE on that? Do you think this kind of Federal spending is the answer to the depressed areas problem?

Dr. LONG. I agree if you could solve the problem for even that large sum of money, it would be a real bargain.

I think there is great difficulty in understanding the problem of the depressed area. So many people say, "Well, the way to solve the problem is to get these people out of the depressed areas." I think the Senator is quite right in saying that that is no solution at all.

You know Adam Smith, who is the first eminent economist, who wrote "The Wealth of Nations," once said that of all baggage to move, the human baggage is the most expensive. People don't want to leave these communities. They have their roots there, and as a matter of fact when people leave that even makes the situation of the community worse, because it means stores are left without customers, and the community, to some extent, unless you move everybody out, just moving some people out makes the situation worse rather than better.

The easier thing to do—it is not easy—is to move capital and managerial ability into these areas. What they are lacking to some extent is community leadership and that is why I have said before that one of the problems here is lack of community leadership.

Mr. SNYDER. Senator HARTKE, your Special Committee on Unemployment Problems will make recommendations to the Congress when it convenes in January. Now could you give us a preview of some of the things your committee has come up with to solve the unemployment problem?

Senator HARTKE. Up to this time, Jim, I don't think that would be possible in view of the fact that frankly we will have to have meetings of the committee. Up to this time we have had the hearings in Washington, where we have been accumulating information, accumulating data. We have had some conversations and some general theories. I don't think they are all going to agree. We are going out into the field, conducting hearings in many States, right in the areas themselves, so there is the human element and the local community approach to these things. Some local communities say they don't need any help, that they can do it all by themselves. Some local communities will tell you just the opposite and then you will have disagreement. Some of them are in between.

I think this: I think the overall problem of standardization of unemployment benefits, which doesn't answer the problem but does answer the temporary problem of the unemployed, is probably going to be one element which is going to be raised.

The question also as to what to do in the line of Federal legislation in the field of depressed areas, whether it is similar to the one we had before, or others, will probably come up; but I want one thing to be very clear, and that is that this particular committee is not a legislative committee. It is not supposed to propose any suggested legislation.

The idea is: It is supposed to lay out the problem, to point out what the difficulties are, and what some possible means of solution may be, and one of them quite easily recognized I think by any member of the committee is the question of education for these people.

Maj. Gen. W. E. Potter, Canal Zone Governor, Addresses Mississippi Valley Association

---

EXTENSION OF REMARKS
OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mrs. SULLIVAN. Mr. Speaker, as chairman of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries, and as a Member of Congress from St. Louis, I was interested on both counts in the recent address delivered in St. Louis by the Governor of the Canal Zone and President of the Panama Canal Company, Maj. Gen. W. E. Potter.

Governor Potter, who served in the heartland of America in the Mississippi Valley area for the Corps of Engineers before being appointed to his vitally important position in Latin America, addressed the Mississippi Valley Association on February 8 on the subject "Have Trade, Will Compete." His talk is an excellent presentation of the facts in connection with our situation and status in Latin America, and the need for stronger economic joint efforts there. Coming at a time when there is so much interest in the United States and in Latin America over political relationships in this hemisphere, Governor Potter's speech provided an insight into the economic relationships which his listeners in St. Louis found exceedingly interesting and provocative, and which I know many Members of Congress will want to read.

Under unanimous consent, Mr. Speaker, I therefore submit relevant excerpts from the text of Governor Potter's speech in St. Louis for inclusion in the Appendix of the CONGRESSIONAL RECORD, as follows:

HAVE TRADE, WILL COMPETE

(Excerpts from an address to the Mississippi Valley Association, St. Louis, Mo., February 8, 1960, by Maj. Gen. W. E. Potter, Governor of the Canal Zone and President, Panama Canal Company)

It is indeed an accolade to be asked to occupy this spot in your program. I am grateful for the opportunity to return to the valley which has the most fabulous record of economic development, and which faces the most dynamic growth probabilities of any single region in this entire hemisphere.

As much as I am inclined to do so, I am not going to just talk valley or association. The same kind of coordination your association has demonstrated is needed in the appraisal and approach to a national problem which merits your interest and attention. This national problem is one whose solution has more impact on your association, the valley, and the Nation, than most others that now confront us. I refer to our current Latin American export-import situation, its health, and a prognosis of its future. The subject has no glamour. Few popular books deal with it—worse, it has no sex appeal, and is politically important only at the higher levels. There, I am sure it excites the highest interest. It should excite our interest here, too. It will be a determinant in your internal development and external trade.

In the valley, throughout the Nation, and worldwide, trade is at a historic peak, and the prospects for the 1960's are fabulous; many industries, including construction, petroleum, and natural gas, trucking and chemicals, are expected to expand by at least 50 percent, and others, including electronics, pharmaceuticals, aluminum, airlines, and electrical energy production, will double during the next 10 years. It is amid this healthy economic situation that we must plan against one of the trade crisis of our times. Today we stand at a crucial point in international trade competition for both foreign markets and sources of raw materials. Under the impact of voluminous production and domestic market expansion, neglect of foreign markets and underestimation of the capabilities of foreign producers might spell future economic slowdowns. We must have a strong promotion of U.S. industry. Let us adopt the slogan "Have Trade, Will Compete." We must increase our competition in world markets if we expect to retain our position of industrial leadership.

Over the years the Yankee trader (this may be a dangerous term to use here in St. Louis, but in Latin America all of us are Yankees, believe it or not) has become a world citizen. As an ability to compete for exports has become more and more important, he has kept us in the running and even ahead of our competition. Too, our industrial machine has increasing need of raw materials which we must import and the Yankee trader has discovered and developed sources. But he has new problems facing him today and he will need help from home.

For this international trade, it is vital to our future that we increase our efforts in Latin America. The business communities of North and South America already are closely related. This relationship bears directly upon the future security and well-being of the people of the entire Western Hemisphere. It is with these neighbors that we shall live in the future and as Boss Kettering of General Motors used to say, "the future is where we are going to spend the rest of our lives."

Too often we hear of Latin America merely as a so-called political problem. The internal uprisings and turmoils of the various republics and the problems of international relations with those republics tend to obscure those things that are of vital importance to us. I could perhaps to easily define it by saying this: "No section of the world is more important to the United States than Latin America," and follow it by the corollary: "The United States is of more importance to Latin America than any other section of the world." I include in this importance not only commerce but development, culture and friendship.

During the last 4 years I have been in contact with many people of Latin America. I have talked to heads of governments, to the diplomats, and to the business people who represent varied interests in both South and Central America. These neighbors in many instances face problems in their economic growth and industrial development that are comparable to problems that we have faced and solved throughout the various States which you represent. To most of the republics, with their trade barriers, limited capital, and lack of people with foresight

and willingness to invest in the future of their country, these problems are insurmountable unless they have outside assistance.

Latin America is rich in raw materials for which our demands rise yearly. This raw material demand—the percentage we must import and its rapid growth in tonnage and additional items—is indeed a cause for concern. It is a demand which must be satisfied by daring and willingness on the part of American enterprise to risk its capital. That U.S. industry has been willing is amply evidenced by the fact that in Latin America is the greatest investment of U.S. dollars outside of the United States. No other continent or country has been the recipient of so much of our investment. Thirty-seven percent of all U.S. private investment outside the territorial limits of our country are in Latin America. There we have almost $9 billion invested. It grows at the rate of $400 million a year. American firms pay local taxes in Latin America of over a billion dollars annually. We employ over 600,000 Latin Americans in that area.

This does not mean all is sweetness and light. There are giant problems. The surge of population growth in the countries to the south of us is terrific. We in the United States think we are growing fast. Latin America has a birth rate two to three times ours. Right now its population is just greater than that of the United States and is increasing 2.3 percent a year. That is twice as fast as world population is rising. The most certain thing in Latin America is the continuance of this population increase. By the year 2000 it will be 600 million, or about twice that of the United States and Canada at that time.

Because it is completely outpacing the gross national product, this population growth throws heavy burdens on local governments. Most of the countries have a single-crop economy and, hence, are unduly subject to price and demand fluctuations. Unless agriculture and industrial development are accelerated, they face economic and political disaster.

The present national production compared to population results in low average incomes, I believe in all cases under $400 a year, and this despite the huge U.S. investments that have been poured into many of the countries. In several countries, whether the standard of the education system is high or low, the high-school or college graduate has small chance for a job at a level comparable to his educational qualification. The economy does not produce job openings at the rate the schools produce graduates. The future holds little promise. Also, the graduate's country will be hard pressed to reap the benefits of his abilities, because he will be forced to accept employment which does not utilize his potential. This disheartening situation undoubtedly contributes to the frequent student uprisings in the Latin American countries.

There are at least two solutions to the economic, cultural, and political dilemma that face practically every Central and South American country today. The first and most logical solution is the course that we have followed within the United States: the complete abolition of all trade barriers and the planned utilization and completely free interchange of labor and raw-material resources to obtain optimum benefits for all sections of our nations. Such an arrangement could be established between the South and Central American nations without necessarily surrendering their national identity in a political or ethnical sense. However, it would require international cooperation, confidence, and mutual planning. Such a philosophy would be incompatible with the nationalistic attitude that exists throughout these nations at the present time. A modification of this idealistic plan, and possibly the first step in a direction of industrialization through pooling of resources, might be the formation of a central common marketing plan similar to that which has performed successfully in Europe. Surely these nations will eventually recognize the potential wealth that lies within their grasp if, instead of selling their ores, petroleum, etc., in crude form, they utilize their excess labor in producing finished products for the world's markets. It is my personal belief that even the force of necessity may not bring about this metamorphosis, and I doubt any of us here will live to see the full and complete integration of the industrial capabilities of Latin America.

The alternate and less desirable solution from the standpoint of the nations involved is a continuation of the process of industrialization and development in each of these individual countries through the inflow of capital and know-how from the more advanced foreign powers. This method has brought a degree of economic stability, and some advancement along cultural and educational lines to a few countries such as Venezuela and Peru, but in some cases in the past, the benefits received by the nations as a whole have been minuscule when compared to the value of the national resources exchanged. Too often a few of the wealthy landowners and politicians reaped the reward, while the workers remained in a state little better than serfdom. There are today, however, many examples of American firms that have established fruitgrowing, mining, manufacturing, processing, and assembling plants in Latin America and are paying salaries and wages that permit their indigenous employees to develop some semblance of the dignity that is the characteristic of our workers in the United States. I believe that this situation will continue to improve, and that industrialization will mean the emancipation of the Latin American workers, as well as the economic development of these nations. Unfortunately throughout Latin America today so-called nationalism is a threat that has deterred the investment of foreign capital. I believe that insufficient effort has been made to establish trade relations that assure benefits to investors, the nation involved and the indigenous employee. Proper agreements can do much to eliminate the danger of property confiscation. Our own interests in Latin America are best served by this second plan if U.S. interests are willing to make the investments and to negotiate fair agreements, that are necessary to secure and hold the vast wealth of raw materials, and to supply the undeveloped but vast market that exists in Latin America.

There is, however, far more to the development of our two-way hemisphere trade than normal economic considerations. Into the picture of future economic potential, swelling population, poverty, and unsatisfied ambition in Latin America has stepped the Soviet with a major effort to capture markets, resources, and countries.

Too often when communism is mentioned, especially in speeches, the tendency is to cry wolf. Perhaps this reaction is justified in that many of us in public life tend to emphasize the potential of Communist gains against a picture of complacency on the part of the U.S. public. I bring it up because of its increasing importance in the commercial field in Latin America. Communist principles of subversion are in full play. The present general goal seems to be one of business-getting but the desired result is success in both fields—political and economic.

I believe that we will get a good share of the trade that new economies being developed in Africa and other parts of the world will provide. I am not worried about our ability to compete in any open business proposition, but I am concerned about this new kind of competition that we face. The clever undermining of honorable trade practices, and the desire and ability to subvert the customer; these are things that pose problems of overriding importance to the industrial health of our nation. In this area the Yankee trader needs help.

In 1956 and 1957 the Soviet bloc purchased on the average about $230 million from Latin America. This was only about 3 percent of total exports, although in individual countries such as Argentina, Brazil, and Uruguay the percentage was higher. In fact, Uruguay's recent trade with the Soviet Union is larger than with the United States. Compared to the Soviet purchases of $230 million, the United States each year purchased $4 billion from the 20 Latin American countries. This represented more than 45 percent of the total sales for all of Latin America. It is too bad that Latin Americans do not realize that sales to the Soviet Government represent total sales. On the contrary, with the United States, governmental contracts and economic transactions are minor compared to the private U.S. trade and investments in the area.

The problem is this: When the Soviet Government engages in economic assistance, it uses the resources of its entire economy because there is complete identity between the economy and the Government. The Soviet economic penetration in Latin America is pursued as a national policy for the purpose of breaking up Latin American alignment, both political and economic, with the United States. This means that the Soviet can, if desired, subsidize its economic penetration for years, buying items it does not want and does not need from Latin American nations just to create a favorable attitude towards the Soviet Union. Dumping of unneeded items on the world market accentuates the impact.

Throughout Latin America, there is a tendency to feel that each nation should stand alone, that it should demonstrate its sovereign national status against any sense of close cooperation with the United States, the "great imperialist in the north."

The traditional sense of wanting to be independent, of not being tied to the United States economically or otherwise, has been fanned and exploited by Communists. Sometimes they would make it appear that Uncle Sam is an enemy of these Latin American nations despite the very opposite evidence in every one of the countries.

The Soviet Union would like to have Latin American nations build up a big trade with the Communist bloc which, once developed and operative, could leave these nations subject to penalties and rewards according to how they "went along" with Communist policies.

Recognizing that in the Soviet realm of foreign trade the U.S.S.R. can sell cheap and buy dear when politically expedient to do so, let us remember that every advance by the Soviet Union in Latin America, by whatever means, is ruled by political and not economic considerations in Moscow.

Cuba can be examined as a case history that can be repeated and whose final result is even yet not predictable. The incidents of Mr. NIXON's trip to South America are a part of the same pattern, perhaps an opening gun that didn't succeed. I find it less than clear that these events are examples of a poor foreign policy of the United States. True, we may be victims, but the events are manufactured out of whole cloth for the purpose of making Uncle Sam the goat. Our greatest peril is in accepting the status and running. Then we will surely lose.

A current major propaganda target for the Communist is the Panama Canal. Recent events in Panama are but a small part of the large Communist scheme of infiltration but they are surely tied together. The action in Panama clearly illustrated the normal Soviet course of harvesting gains from

local nationalism, fostering that nationalism, and using it as the trigger for greater goals.

I do not believe that most Panamanians realize what is happening, but after observing several riots, seeing the same people repeatedly doing the same job of exciting, the same pattern of buildup (a complete exposé of well-recognized mob techniques), the source of trouble is evident. The fact that Communist financing is relatively small, that only a few persons have come back to Panama from training in Moscow, should not cause us to underestimate the force of the movement. Unbridled nationalism in its most intense phases, especially in Panama where it is constantly fostered by the press and radio, is an excellent basis for violence. When this attitude toward violence has the United States as a target, the stage for eruption is complete.

The U.S.-operated canal furnishes this visible on-the-spot target. A nation relatively poor in natural wealth, Panama's economy enjoys direct benefits of more than $60 million annually from canal activities. These millions are vital to Panama's economic health. They are gained largely through direct U.S. purchases of those products and services which Panama is able to supply and through the employment in the Canal Zone of over 10,000 Panamanians given opportunities and paid at rates well above the going standards in Panama.

For years the Isthmus of Panama provided a famous example of mutual friendship. The recent violence and mob action interjected into the previously normal international climate was totally unnecessary—so unnecessary that it was obviously fostered. In my mind, that fact is clear and sufficiently proven.

Since its completion the canal has been recognized as one of the major engineering feats of all times. To the great mass of American citizens, however, the canal's prominence, even its essentiality in our economic existence, has been overshadowed by its romantic background. A stupendous growth in traffic through the canal is taking place. Of the total volume, 60 to 70 percent is from or to the United States. Today almost 900 oceangoing commercial ships per month are transiting the waterway carrying over 5 million tons of cargo. And by the end of the century canal traffic may double if present trends continue.

Many raw materials necessary to the world's industrial machinery could hardly go to market without the canal. Look at Latin America's international seaborne trade. Several of the South American countries depend on the canal for the major part of their economy. In the case of Chile, 84 percent of all her imports and exports pass through the canal; 72 percent for Peru; 27 percent for Colombia; 85 percent for Ecuador. Supersized vessels, principally carrying ore northbound from Peru and Chile, last year established a new record in the number of transits by big ships.

What greater pinpoint target for the Soviet can be imagined than a Panama Canal whose logistical importance is increasing in the ever-expanding world economy; whose commerce is almost entirely that of the free world; whose traffic consists of those elements on which the U.S. industrial machine depends for its continued growth. It is the Panama Canal upon which the economy of the west coast of South America rests; upon which the flexibility of the exports of most of the Latin American republics is dependent.

Further, the Panama Canal controls a large part of the flow of traffic to the Mississippi Basin ports. To and from the south coast ports of the United States last year there were 8,563,000 tons of products that used the canal. Over 2 million of these tons were to and from Latin America. Were it not for the canal very little of this tonnage would have come to your south ports, and most of it would not have been shipped out. Much of the entire tonnage might have been lost to American commerce. In many commodities—raw and finished—the ability to use the canal is the margin that enables us to stay in a competitive market.

The distinguished historian, Samuel Flagg Bemis, writing in U.S. News & World Report several weeks ago declared, "Scarcely anything, short of withdrawal of American forces from Europe and the Asiatic littoral, or the dissolution of NATO or SEATO, would please the Red imperialists more than the neutralization of the Panama Canal or the transfer of its control and defense to the Republic of Panama, like the Suez Canal to Egypt."

I feel it is urgent that all of us realize that Soviet economic aggression has been moderately successful and that it will pose a progressively more serious threat until we effectively counter it. Noting that "Russia has launched an open drive to gain political influence in Latin America," the London Times stated "the thin edge of the wedge is trade." From the start our approach must be, in the words of Alfred North Whitehead, that all good things always stand upon the "razor's edge" between preservation and destruction. Western civilization, the idea of individual liberty and of free minds, did not come to its present development by the road of tranquillity.

Our Government and our private enterprise long has had a deep sense of responsibility for the development of the economies of the Latin American republics. I believe that in the U.S. men and U.S. business we already have throughout Latin America we possess a force which can very effectively compete, both in expanding our trade and our trade relations. Certainly U.S. private enterprise has the sales ability and the marketing techniques to sell goods and, just as capably, to sincerely convince our neighbors that our biggest, most valuable gift to Latin America is not only our good will but also our business. Our businessmen can accomplish this selling job with the approaches and on the businesslike basis necessary to win respect. They can establish that it is through the U.S. trade channels that the Latin American populations are best assured of a good future. Such individual diplomacy undoubtedly could be given impetus through the American societies and businessmen's groups which now exist in the 20 republics and have a total membership of at least 5,700 U.S. citizens who reside in the various countries. Many are from businesses in this valley. It must on reflection seem almost silly to have to admit that in an area where we have had a century and a half of opportunity and where we have many more Americans engaged in business than there are dedicated Communists that we can find ourselves doing a less persuasive job.

Probably there exist no better examples of another bold move, which might well be taken elsewhere to assure our ability to compete, than those unique civic agencies in New Orleans, International House and International Trade Mart. Dedicated to world peace, trade, and understanding, these institutions are each year expanding the definition of aggressive selling. They are known and respected by Latin American businessmen. They are tools of business diplomacy which need repeating all over the continent. If United States Steel, Sears, and General Motors need foreign branches, maybe they do also.

This then is the story. Here in this valley you have fostered a development of untold future. It demands imports. It must export just as any industrial area must. It has its transportation and ports but more and more in the future it must compete and plan for its outside the U.S. sources of raw materials and markets. Some major important part of the future depends on the Panama Canal but a greater part depends on a sensible man-to-man relationship with the Latin American nations. These nations need considerable help in orienting their commercial future.

The solutions to these problems won't appear by magic. They will need the same fostering your own development required. This just means an increasing part of your thoughtful effort must be outwardly directed. Your talents must be divided; in so doing you will be strengthened forever.

A Good Naturalized American

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. FULTON. Mr. Speaker, I am calling to the attention of the Congress and the people of the United States, the fine generous act of one of our newly naturalized citizens who came to America for freedom.

She has left the full amount of her estate, after taxes, to the U.S. Government in gratitude to this fine country of ours, for our warm reception to her as a stranger within our gates, and in remembrance of the fine life which she led since coming to America.

These people we should certainly remember, so I am giving special tribute today to the late Mrs. Jennie Silverman, of Pittsburgh, Pa., who has given everything to her adopted homeland.

What a wonderful, generous act, and such an enduring tribute to Mrs. Silverman.

Under leave to extend my remarks in the RECORD, I include an article from the Pittsburgh Post-Gazette of January 12, 1960:

WILL OF WIDOW SETTLED; UNITED STATES GIVEN $55,000—RUSSIAN IMMIGRANT LEAVES MONEY TO GOVERNMENT FOR GOOD TREATMENT

Uncle Sam is $55,000 richer today, not because of income taxes but because common pleas court finally settled the estate of a Russian immigrant who wanted "to show her appreciation."

Mrs. Jennie Silverman, of 7 Clarendon Place, East Liberty, left her entire estate of $74,150.59, in cash and Government bonds to Uncle Sam. Yesterday the court issued a distribution decree, designating $55,244.19 should go to the Government. The remainder, $19,477.35, will be used to pay State taxes and administration expenses.

Mrs. Silverman, 75, died last March 6 of a heart attack, 1 hour after she was knocked down by a strong gust of wind.

According to Jerome G. Auer, treasurer of the Dollar Savings Bank and executor of Mrs. Silverman's estate, the well-to-do widow wanted to leave her money to the Government because she was "always well treated in this country." Mrs. Silverman and her late husband, Max, a broom and brush dealer, came here from Russia as young people.

Mrs. Silverman left her personal property to a niece, Esther Krakoff, of 199 Lilac Street, Squirrel Hill.

Appendix

Address by Senator George D. Aiken, of Vermont, Before the National Rural Electric Cooperative Association

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Saturday, February 27, 1960

Mr. MOSS. Mr. President, I had the privilege of attending the annual meeting of the National Rural Electric Cooperative Association, held at St. Louis on the 24th of February, and hearing the very excellent and eloquent speech delivered by the senior Senator from Vermont [Mr. AIKEN]. I ask unanimous consent that the remarks of the senior Senator from Vermont may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR GEORGE D. AIKEN, NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, ANNUAL MEETING, ST. LOUIS, MO., FEBRUARY 24, 1960

The greatest satisfaction one can get out of public life is working with people for the good of their country—people who have vision to see ahead—ability to plan—and determination to achieve their purpose.

The members of the NRECA are people of this kind. It has been a great satisfaction to me to have worked with you and your dedicated general manager, Clyde Ellis, throughout the years—to have fought with you again those who destroy the REA program and to have enjoyed with you the fruits of truly remarkable achievements.

This year of 1960 is the 25th anniversary year of the Rural Electrification Administration.

It is also the 17th anniversary of the first annual meeting of the NRECA here in St. Louis.

It was my privilege to be one of the speakers at that meeting along with Senator George Norris and others who had crusaded for the extension of electric light and power to the rural areas of America.

When I found that I was to speak at this annual meeting of the NRECA, I looked up the talk which I gave here in St. Louis at that time.

Except for the references which I made to the war, which was going on in all its fury, I might just as well make the same remarks here today that I made 17 years ago, for they are equally applicable to these times.

At that time I told you, "The hope of America lies in a better rural future."

Since then, we have made progress, great progress. Our soil and water resources have been improved. Agricultural production has increased. Markets have expanded, and we are living in better homes with more conveniences.

The 800,000 farms which were served by the REA in 1943 have now increased to about 2½ million, and the total number of rural consumers served by the REA today has passed the 4 million mark. The expansion of rural electrification is to a great degree responsible for the great increase we have had in our national economy.

Billions of dollars worth of new business have been created for our industries.

In spite of the magnificient gains made to date, however, our job is far from complete.

I doubt if it ever will be complete, for keeping abreast of changing rural conditions, and keeping pace with the progress of technology presents a continuing challenge for greater effort on our part.

The welfare of the Nation today depends on rural America to a greater degree than ever and rural America will prosper or fail according to the extent to which we continue and improve the services which the REA has initiated and thus far carried forward.

The REA has not merely brought light and power to millions of farms and rural homes, it has led the way to many other improvements in rural living including transportation, communication, better health, better education—television.

Its worth cannot be measured by dollars and cents alone, for its contributions to better living and greater security for farm and city people alike does not lend itself to such an estimate.

During all the years of its existence, the REA has fared well at the hands of Congress.

There is every indication that this fair consideration will continue for the forseeable future.

We must not, however, take it for granted that the future will be all rosy.

REA cooperatives and regional and national organizations must be kept strong.

It is important that all local co-ops achieve and maintain financial stability as soon as possible for in spite of our present optimism the unexpected could happend.

However, if you ask me what the present session of Congress is likely to do to affect the REA, my answer is nothing—directly, other than to insure adequate funds for its operation. I look for no changes in basic legislation in this field.

REA members, like everybody else, are of course affected by war and peace—prosperity and depression—health and sickness and so on.

As individuals we feel the effects of competition from others in the same line of business.

In this day and age, however, it is not competition between individuals but group competition that may make or break us.

That is why every important industry or business or social group has of necessity organized those engaged in the same line or seeking a similar objective.

That is why the REA cooperatives 18 years ago organized the NRECA.

Except for the fact that users of REA light and power are organized, it is certain that this great program which has meant so much to rural America and American industry would never have made such a record of achievement and might even be well on its way out today.

The opponents of the REA have one of the best financed and most closely knit organizations in America. The electric light and power industry is potent politically as well as economically. Its leaders are able, astute and good organizers. They are not in business just for their health. They are in business for profit.

They not only seek to stamp out competition wherever they find it but also they support for State and Federal positions those candidates who they feel will see things their way.

The light and power industry has been so successful in the political field that in most States it has no fear whatever of the quasi-judicial bodies which are set up to regulate it. In many States the laws are quite favorable to the corporate utilities and regulatory agencies are inadequately financed.

In the Federal Government it has been so successful that the benefits it has received in the form of tax privileges and in other ways far exceeds any real or fancied subsidy which the REA has ever received or ever will receive. They do not include this fact in their full page advertising.

At this point I wish to compliment the NRECA on its new national advertising. It is constructive and shows positive rather than destructive thinking.

In spite of the great privileges and benefits which the corporate light and power industry has acquired rightfully or otherwise, it still is not satisfied.

So long as REA cooperatives and municipal electric systems operate they may expect to feel the full force of the opposition of the light and power industry.

Were it not for the examples and yardsticks set up by the co-ops, the corporations would be able to extract even greater profits from the public than they do today.

The power industry seeks a complete monopoly today just as it has been doing for decades. Public power systems and cooperatives stand between it and the attainment of this objective.

Monopolies either public or private are bad for a free people. They stifle progress. Totalitarian industry will lead to a totalitarian government.

Seventeen years ago I said:

"I have no quarrel with private industry. I believe in it. * * * But when the time comes that a comparatively small group of men virtually obtains a monopoly over a necessity of life, then it is high time that action be taken to effectively regulate or eradicate such a monopoly * * *."

And I also submitted at the same time a formula for meeting the monopolistic challenge when I said, "Cooperative methods will regulate private industry far more effectively than laws enacted in legislative halls, or regulations promulgated by boards and commissions."

During the 17 years since I made that statement I have had no reason to revise my opinion.

Cooperatives which are themselves a high type of private industry have not only regulated the rates and services of the corporate utilities in many States, but have forced them to serve areas and users which would not have been served to this day had the REA co-ops not shown the way and forced the service.

So when I say that the present session of Congress is not likely to do much to affect the operations of REA directly I do not mean that the cooperatives will not be under attack.

They will be bitterly assailed, not only in Congress but in the press and on the air as well.

Not only will rural electric co-ops be under attack but the war will be carried on against other farm cooperatives as well.

It would be well for members of all farm cooperatives whether purchasing—marketing or servicing to remember that their opposition has been financed in large part by the utility interests.

The opposition which organized farmers face will be rough and tough.

It cannot get support enough in Congress this year to do any real damage but—look out. The boys you are playing against don't play for marbles and they do play for keeps.

In the fall of 1958, a ruling of the Comptroller General threatened to raise cain with existing and future loans of the REA co-ops. That bogey has been laid to rest but there are other gimmicks which can be thrown into the game and don't think they won't be.

One of the most plausible of these gimmicks and one which registers best with the uninformed public concerns interest rates.

REA borrows money for 2 percent. Whether this rate has amounted to a subsidy or not over the life of the program is a disputed question.

Let us assume, however, that 2 percent interest does constitute a subsidy at least temporarily. The next question then is whether a subsidy for the purpose of extending light and power facilities into rural America is warranted.

We might just as well ask whether the economic and social development of our farms and rural homes is warranted at all.

Farm life must be made more attractive not only in terms of income but in terms of living as well.

Already it is getting more and more difficult to secure help for dairy farms. No longer will the hired man take a job that ties him down 7 days a week.

Farmworkers expect vacations and days off like other people and why not?

With the exception of certain specialty farms, the farm unit of today must be economic enough and mechanized enough and efficient enough so that work can be staggered among members of the family or hired employees.

The farm unit of the future must be even more efficient.

How little some people realize the great task confronting the American farmer. And how little they appreciate the extent to which their happiness, their welfare, and their very existence depends on him.

The so-called farm surpluses of today are only a thin cushion of security which separates the American people from want.

A lot of you folks here today will see the time when the soil of the United States will be called upon to produce for 100 million more people than it does now.

At present we are indeed the best fed and best clothed people in the world. Yet that fortunate situation could change in a hurry if the carping critics of our farm programs had their way.

These people magnify the mistakes of a few and condemn as a whole those upon whom they are most dependent.

There are those who say that the REA should no longer be permitted to borrow money from the Government at a low rate of interest. Some say we should not borrow from Government at all because 50 percent of our new members are not engaged in farming.

Certainly many persons now living on the farm or in the country do not depend on the land for their living, or at least all of it.

We know that a lot of people have moved out of the city into rural areas where they have gone into business, manufacturing, or commerce or simply to make their homes and raise their families in a congenial and natural setting.

I am delighted that this is so. I only wish it could prevail in all parts of America to the extent that it does in my own State of Vermont.

I am glad that industry can now locate out in the country and make full- or part-time jobs for thousands who might otherwise succumb to the age of technology and have to give up their farms.

Except for the REA program, however, this adjustment to a better rural living for millions could never have taken place.

Why should the people of a community who had the courage and foresight to organize a cooperative and bring light and power and prosperity to a hitherto handicapped area now be penalized for so doing?

They won't be as long as I can help.

They should instead be thanked and applauded. I unhesitatingly predict that any efforts made to increase interest rates to REA cooperatives will get nowhere at all in this session of Congress.

Interest rates, however, should be a matter of great concern to all of us and particularly to those responsible for the financial stability of our Government and our economy.

Not only do excessive rates contribute to a general inflation, but the interest paid on borrowed money now constitutes the second highest expense of Government.

President Eisenhower has said that our interest bill will amount to about $9,500 million this year. This is about three times the real cost of all our farm programs put together.

The trend to higher interest rates is not confined to the United States alone. It is a worldwide condition and I do not envy those officials of government charged with its control. Yet we do know that unless the cost of borrowed money can be held down to a reasonable level that we are headed for trouble. It is a historic fact that virtually every recession or depression which we have sustained has been preceded by sharply increased interest rates such as we are now undergoing.

I urge that instead of seeking to double or treble the cost of money to REA cooperatives which generate income and revenue that our Government attack with equal energy the important task of holding interest rates for all people at a reasonable level.

The cost of capital is one of the most important factors in the expansion of our national economy.

Rural electrification has plowed the ground necessary to the redevelopment of America and the expansion of this economy.

While country areas were without power and light and telephones there was little inducement for industry to move out of congested areas or for parents to think of raising their families away from good schools, hospitals, and recreational facilities.

Those conditions are now changed. Light and power has made it possible to live in the country and enjoy the advantages of both rural and urban living.

Although we are still badly lacking in transportation facilities we are hardly at any greater disadvantage in this respect than are the people of our great cities.

The Committee on Interstate and Foreign Commerce of the U.S. Senate is now making a detailed study of transportation with especial emphasis being given to rural areas.

It is possible that we may find it necessary to subsidize certain types of transportation in certain areas, but before talking about subsidies for airlines and railways we have every right to demand and receive adequate service from these carriers.

In other words—no service—no subsidy.

Once a community gets adequate transportation, we can live on the farm and enjoy the benefits of both city and country living. Twenty miles to the high school, hospital, church, or theater on a modern country highway takes no more time, nor gas than it does to travel through 20 blocks of today's city traffic.

We will be shortsighted indeed if we try to crowd our increasing population into already overcrowded cities and industrial areas.

Our economic, social, and military security depends upon decentralizing our population and giving people a fair chance to live and work and breathe fresh air.

Because of the vision and courage and steadfastness of pioneers in the REA field, millions of Americans are already living more complete and productive lives.

As I stated at the beginning of this talk, the work of the REA is not nearly done. I can foresee the time when twice as many families will be members of our cooperative organizations.

It is in the interest of all Americans that rural electrification programs go full speed ahead, preparing the ground for an ever greater nation and a happier and more secure people.

February 20–27 Observed as National Future Farmers of America Week

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. WILEY. Mr. President, during this week, February 20 to 27, observances have been underway in recognition of National Future Farmers of America Week.

Throughout the years, the FFA program has made a constructive contribution to developing leadership in agriculture for the future.

Currently, there are more than 380,000 members, with 9,000 local chapters in 50 States and Puerto Rico.

In Wisconsin, for example, the membership numbers 14,000 in about 280 chapters.

As we know, the primary aims and purposes of the FFA is developing agricultural leadership, cooperation, and citizenship.

The specific purposes include the following:

First. To develop competent, aggressive, rural, and agricultural leadership.

Second. To create more interest in the intelligent choice of farming occupations.

Third. To encourage members in the development of individual farming programs and establishment in farming.

Fourth. To participate in worthy undertakings for the improvement of agriculture.

And there are a number of other worthy objectives.

Recognizing that we still face serious problems in agriculture, the Nation has a special need for developing imaginative, creative leadership in agriculture to meet the problems of the future.

Recently, the La Crosse Tribune contained an informative article relating to the current observances in recognition of National FFA Week.

Reflecting upon the constructive efforts of a splendid program that has contributed much to providing training, experience, and leadership in agriculture for the youth of America, I ask unani-

mous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the La Crosse Tribune, Feb. 25, 1960]

FEBRUARY 20–27 OBSERVED AS NATIONAL FFA WEEK

Future Farmers of America members throughout the Nation are scheduling special activities to focus public attention on the work of their organization during National FFA Week February 20–27.

Membership in the FFA is made up of farm boys who are students of vocational agriculture in high school. The organization's activities are designed primarily to help develop rural leadership and good citizenship and to stimulate the boys to better achievement in their study and work toward successful establishment in farming.

The National Future Farmer organization has 380,000 members, with 9,000 local chapters in the 50 States and Puerto Rico. Membership in Wisconsin totals about 14,000.

Future Farmers choose the week of George Washington's birthday each year for the observance of National FFA Week. Although usually recognized as a Revolutionary War general and our first President, Washington's first love was the farm he called Mt. Vernon. He was one of the first in the Nation to practice contour planting, crop rotations, fertilization and other soil conservation and improvement methods.

It was more than a century after Washington's death before general use was made of many of the sound agricultural practices that he advocated.

National Future Farmers of America week seeks to focus attention on the work of the future farmers of today, who will be the successful farmers of tomorrow. In Wisconsin the organization is sponsored by the State board of vocational and adult education.

This Nation must have a constant supply of new farmers every year to replace those who die, retire or otherwise leave the farm. These must be men with experience and training, for the successful farmer today is both a scientist and a businessman; he must be a mechanic and a laborer, at the same time capable of leadership in the affairs of his community.

Generally, they must be men who have begun farming at an early age, so that by the time they are ready to marry and start a family they will be firmly established in a farming program that promises a good future.

Vocational agriculture and the FFA constitute the most effective program, say experts, yet developed for training boys to be good farmers and helping them become established in the farming occupations of their choice.

In view of the Nation's need for new farmers, it is fitting that recognition be given these young men who are preparing for careers in farming.

Consulting Engineering in Government

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address, "Consulting Engineering in Government," delivered by Mr. Mason G. Lockwood before the American Institute of Consulting Engineers on January 18, 1960.

The Honorable J. Stephen Watkins, of Lexington, Ky., has asked me to place this item in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONSULTING ENGINEERING IN GOVERNMENT

(By Mason G. Lockwood))

In the broad sense, I am going to discuss consulting engineering in government—in a narrower sense, the effort to legislate consulting engineering out of government. By government, I mean the whole complex of Federal, State, municipal, and local agencies which are supported by public funds. By consulting engineering, I mean, of course, private practice engineering.

Prior to World War II, organizations engaged in the private practice of engineering in this country were relatively small in size and few in number. The principals and other personnel comprising the consultants of that day were apt to be extraordinarily able and rather highly specialized engineers. Because of their engineering achievements, these men were likely to be very highly regarded throughout the areas in which they operated.

Such consultants rather frequently supplied certain services to government at local and State levels, and sometimes at Federal levels. The tendency was for the work of this nature to deal with highly specialized problems and studies warranting much mature engineering judgment and experience. Government itself was simple and did not entail vast public works, although, at the local and municipal levels particularly, relatively large and important public works were needed. In these instances, the basic planning frequently was accomplished by consultants, with the mass production of working drawings carried out by engineers employed by the sponsoring agency.

The explosion which set the world powers at each other's throats for a second time in our lifetimes triggered an explosion in the demand for civil, military, and industrial works of the sort which engineers plan and execute. This was only two decades ago. But, in that short time, nearly everything has been turned upside down. During the period of actual hostilities, the demand for engineers in this country increased phenomenally. Many engineers, including consultants, went directly into the military service, where their talents and experience were used, misused or abused according to individual circumstances. Consulting offices not too depleted of trained manpower undertook Government contracts by expanding with the best available nonmilitary personnel. As the war wore on—and, indeed, after it closed—a startling number of new consulting firms appeared. These were supported in the main by public expenditures, in the form of contracts either directly with the Government or with industrial or other agencies subsidized by the Federal Government. On the whole, the consulting engineering fraternity might well have been awarded an Army, Navy, and Air Force "E" for the excellence of their performance during this critical period. Without question, this group made a highly notable and generally unselfish contribution to the victory of the free countries.

The widely heralded and much-feared bust scheduled to follow the close of World War II failed to come off. Instead, American economy and the prosperity swept along by unremitting inflation, the country went on the wildest spree in its history. This spawned more new consulting firms—many tied solidly to activities arising from military expenditures. At the same time, nearly all agencies of Government at all levels which dealt with engineering matters expanded their engineering staffs as rapidly as the supply of men and money would permit.

These and other such factors focused attention on the widely publicized and sometimes wildly exaggerated critical shortage of engineers. Privately practicing engineers all over the country took the lead in persuading the public to permit the raising of salaries of employed professional and subprofessional engineers, as required to attract and keep on attracting to Government service competent men in adequate number. This campaign was successful, in the main. Salaries were notably increased and the prestige of engineering notably raised.

The inherent evil of bureaucracy began to raise its ugly head. As the leveling-off period set in, and engineers became available to Government at the higher inducements, a strong trend for expansion of these engineering staffs started running. It is a well established and historical fact that Government is a ratcheted, unilateral device which, until it collapses, can move in only one direction. It is as incompressible as water, but at expansible as hydrogen. Even able, intelligent and earnest leadership has been victimized by the siren call, "we can do it cheaper." Yet it is safe to generalize that any agent of Government is seldom able to do any kind of engineering at less cost to the taxpayer than the cost under private enterprise techniques.

Unhappily, then, engineers employed directly by Government and engineers employed directly by Government and engineers in private practice find themselves at the threshold of a potentially deadly conflict in competing for that part of Government engineering which can be done and has been done to the public's better advantage by private practitioners.

Out of all this rather suddenly comes a noisy and rising demand that the services of consultants be dispensed with, and that civil service engineers take over virtually all engineering which is paid for with public funds of any kind—local, State or Federal. Many, if not most, of those who are now mouthing this particular brand of "save-the-country" philosophy have been suckered into advocating it for, of all reasons, an economy measure. To any who know the facts—and I believe almost every thinking engineer does, whether in public or private practice—to base this pitch on reasons of economy is a monstrous and maddening outrage.

Consultants never have, to any significant degree, either done or advocated that they do the engineering which public agencies can more economically or better do. They have no right whatever to such work. But in the areas of legitimate interest to consultants, it is a reasonable generalization to say that their work is at least equal in quality and much more economical in cost than civil service engineering.

You are all familiar with the rash of investigations and rumors of investigations pending in Washington, as well as in many State capitals and local seats of government, investigations which seek sharp curtailment or total elimination of private practice engineering on public works—civil, municipal and military. You know that the House Committee on Appropriations has said, for example, that it "is concerned about the increasing practice of contracting survey and design work to private engineering firms * * *" and "that the departments involved will be prepared for extensive hearings in this matter in connection with the consideration of the 1961 bill." The committee ought to be concerned about the use of private engineering firms on public works,

but it appears that it is concerned for the wrong reasons.

You are familiar also with this classic but official comment of the Comptroller General of the United States: "The use of consulting engineers results in additional cost to the States and the Federal Government by reason of the overhead and profit included in the fees normally charged by such firms."

I am not one who sees a Socialist or a Communist behind every bush. Nor, indeed, do I think these attacks on private enterprise are inspired by sinister influences of any sort. Rather, as I have indicated, I think much of this is sincere, but stems from ignorance of the facts. The ignorance factor is present, though, I believe, primarily because this insidious movement is feeding to some substantial extent on the frustrations of thoroughly entrenched engineering bureaucracy. Whatever the motivation, this is a socialization of engineering trend.

I should like to emphasize that it is my belief that the trend in this direction is as strong in many State governments and in many municipalities and other local governmental agencies as it is at the moisier and more publicized Federal level.

If any engineers in private practice think this is a movement that is going to hurt others but touch them little, they might well ask themselves this: To what extent will I or my firm be affected if, during the 1960's, the volume of private practice engineering on public works—Federal, State, and local—is reduced by 25 to 75 percent?

I don't think it is being too extreme to say this could be the beginning of a war for our economic survival. For the consultants, fortunately, it is a sort of holy war. Truth is, indeed, on their side. The engineering work the consultants want to do for government, they can do as well and at less cost to the public, and there is no question whatever about this. The trouble is that only the consultants, and those others who have taken the trouble to examine all the facts objectively, understand this.

It ought to be easy for us to make our case before the public. Government has not found a chink in our armor, a skeleton in our closet. Consultants have some chinks in their armor, and, perhaps, some skeletons in their closets, but the cost of quality of engineering work done for government is not one of them. Indeed, this is one of our greatest and proudest achievements. Were we under attack because some of our work has been a bit inferior, we might have to give a little ground, because the war and postwar boom did spawn a few—but relatively few—pretty sorry outfits. But, so far as I know, we are not being attacked on this point.

One wonders why there hasn't been a little more truth mixed in with some of the charges that are being leveled against us. Colton pointed out, "Falsehood is never so successful as when she baits her hook with truth, and no opinions so fatally misleading as those that are not wholly wrong; as no watches so effectively deceive the wearer as those that are sometimes right."

Our course seems crystal clear to me. We have got to get righteously indignant about these unfair goings-on. I think we ought to consider taking the initiative immediately and start doing a little swinging ourselves. Rather than running from these investigations, or trying to mollify the investigators, we might well be urging legislative bodies throughout the country to investigate the comparative costs to public versus private engineering. The results would be eye popping.

We don't belong on the defensive in this situation. Our posture shouldn't be as witnesses for the defendant wherein we try to convince people that we haven't been stealing any public funds. Personally, I would welcome an investigation of the McClellan or Tom Walsh or Truman committee type at all levels of government, if it would require certain contracting agencies to come and attempt to justify wasting public funds by not having more of their engineering done by private enterprise.

Finally, I am happy to report that this philosophy is catching on. Many of the organized engineering societies of the country are hard at work preparing for the forthcoming battle in Washington. Certainly the Council of the American Institute of Consulting Engineers has foreseen this need and is preparing to do its part. The American Society of Civil Engineers, I know, is very actively taking necessary steps, as is the National Society of Professional Engineers. This is true also of the Engineering Division of the American Road Builders' Association. While I have no specific information with regard to the activities of the other organizations along these lines, I am confident they, too, are preparing to meet this attack head on with the cold facts.

Yes, It's a Race

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Saturday, February 27, 1960

Mr. SPARKMAN. Mr. President, recently an editorial was published in the Florence (Ala.) Times entitled "Yes, It's a Race."

Of course, I think everyone could gather from that title that it dealt with this contest in missiles, and matters of that kind. It has been said from time to time that we are not competing with Russia. I have often said that you cannot get that thought through the minds of the American people that we are not competing. This editorial deals with that and the very serious problem involved in the missiles lag, and I believe those familiar with the facts will admit that problem does exist at the present time and probably will grow as time goes along.

I ask unanimous consent, Mr. President, that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YES, IT'S A RACE

Generally, when the U.S. Government answers charges that it is falling behind in the space-missile race, it says two things:

1. Its overall defense posture is sufficiently strong to protect this country and to rain nuclear destruction on any potential enemy.

2. While America's space progress may not match Russia's, our scientists have developed many qualitative superiorities which make our missile work better than it seems.

You can get plenty of argument from thoughtful, informed men as to whether these are reasonable and satisfactory answers from a military standpoint.

But all aside from the military aspect, these propositions obviously do not answer the complaint that Russian space accomplishments have done great damage to America's prestige around the world.

The Government seems to have taken the stand that, whether we are in fact losing or simply appear to be losing the space race, it does not matter so long as our broad defense picture is sound.

Many men have cautioned that grave psychological harm was being done by our evident failure to keep pace with the Soviet Union, and that we could not afford to sit by and watch this happen.

George V. Allen, director of the U.S. Information Agency, now adds his voice forcefully to the warning group. He says flatly that we can't maintain a place of leadership in the world's eyes unless we accept the fact that space exploration is a race—and a race we must win.

There is still another side to it. Not only will our failures hurt us in the world view, thus engendering a correspondingly greater fear of the Russians, but the Soviet leaders are likely to develop a dangerous overconfidence that could spur them into aggressive misadventures carrying the peril of ruinous war.

In Allen's judgment, such cockiness already shows itself in the Kremlin and is affecting the world diplomatic and psychological balance.

Wars are started or prevented by men. Anything that has major impact on their judgments and attitudes is a serious factor in the world power struggle. The prize in this instance is not the Astronautical Engineering Award of 1960. It is the survival of the free world.

It is time we made our moves in full awareness of the psychological as well as the strictly military value they may have.

Tribute to Galileo Galilei

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, February 27, 1960

Mr. KEFAUVER. Mr. President, one of the great scientists of all times, Galileo Galilei, was born 396 years ago last February 15.

I was reminded of this fact by an eminent American scientist, Mr. Olindo R. Angelillo, who was awarded the Galileo and Curtitone medals by the University of Pisa last May for his pioneering work in hydrology.

Mr. Angelillo wrote a glowing tribute to Galileo in a letter to the editor which was published in the October 15, 1959 issue of the Christian Science Monitor.

Mr. President, I ask unanimous consent that this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE AMERICAN CAUSE

To the CHRISTIAN SCIENCE MONITOR:

While at the last abode of Galileo Galilei, in Florence, my thoughts surveyed man—his preconceptions, his intolerances, and the enslaved denials of all that which would liberate his mind and emancipate him as the creature of God.

I had experienced the loneliness of one shunned. All I said is that the earth, like any mammal, has an anastomosing system. In the earth these vein channels are an interconnected system of rock fissure aquifers that may be described as subterranean streams of circulating water. These sub-

terranean streams are influenced by any one and all the disturbances experienced at any time at any portion of the earth.

From time to time the stress of a region becomes greater than that particular region of the earth is able to endure. Therefore, it cannot continue to move, rub, squeeze, and contort in step with the unifying rhythm of the whole.

When such a region is out of step it may slip and fall. This slip or fall may at first occasion only a thud, but the added load of the fall may break through and jar the floor, in which case the jar may cause a rupture in the floor. Such a rupture would transmit a varying discordance everywhere, until the quiescent rhythm to which all things respond again prevails and the needed harmonious balance is restored.

The earth, having the spirit of growth like all living things, repeats these growth adjusting experiences and, like any energetic growing child, gets scratches and bruises and walks along paths where it is wont to slip and fall.

All these imperfections are healed again and again after each mishap slip, or fall. Living water, until its youth wanes, is ever ready to dissolve and relieve the distressed and bring to the less distressed that which it needs.

It was in the stillness of the garden within the courtyard of Galileo's home that I was able to appraise and express the nobility we sense in the American cause.

The American cause is founded on "more"; but not more physical things alone. More cars may bring more accidents. More things may mean the more intense the sting of greed. But America truly seeks more of the evangelical love, love, love—that love that knows not the differences of place nor the differences of race, but only the more enduring grace of the oneness of all.

Aboard the plane en route home on May 9, 1959, I composed this pledge, a gift which, with the grace of gratitude, I dedicate to The Christian Science Monitor. I entrust it to your care as a custodian of liberty, whose never-ending task is to bring to the knowledge of all men the hope for more peace founded on more truth—and above all, more certainly that the brotherhood of man is a birthright inherent in the wholeness of creation and of manifest joy to the harmony of God.

In this unfolding spirit of growth I composed this rebinding thought, a thought which, once understood, will not only bring peace, but will merit the respect of all men.

My pledge is this:

I pledge allegiance to our flag and to the dignity of the individual for which it stands—one nation, indivisible, but dedicated to God, in whose oneness, truth, and moral law there is the reverence for life, hope for open-mindness, the peace of inner security, more equitable justice and liberty for all.

OLINDO R. ANGELILLO.

LOS ANGELES.

Ike's Great Latin America Success

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. MUNDT. Mr. President, it is a remarkable spectacle to see a man who won fame in the winning of a war now find new honors in the field of peace and international relations. Our great President has been able to serve with distinction both in war and peace and his current effort to observe personally the difficulties in South America, and to seek means of easing points of stress between our friends and neighbors to the south and the United States will be of historic significance. The good wishes and full support of the people of our Nation are with him on this tour.

I have every confidence in the success of this mission. Having observed closely the results of previous trips which President Eisenhower has taken, I am disposed to believe that relations between the Latin Americans and our people will improve sharply at the point of meeting between them and our President.

I listened with attention to the remarks which President Eisenhower made on Sunday evening, prior to his departure. I was struck with the thought that his was a speech to inspire confidence. The President knows that to gain the confidence of the people of South America we must first have confidence in our own strength and ability. I am sure that the people in South America respect the President and have full faith in his reports.

The people of South America realize that the President seeks only to strengthen the ties between our people and our neighbors and that we do not seek political or financial advantage over them. This respect for the President, this confidence which is reposed in him, this faith in his integrity, will bring a full measure of trust, cooperation, and friendship for the United States. Our Nation should be grateful for the great good which will accrue to us through the personal efforts of President Eisenhower in these trying times.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Evening Star of February 22, which points out the challenging task which faces the President and how he is undertaking his role to cement friendships with countries to the south of us, while partisan critics with political ambitions contribute nothing but their threadbare, hackneyed carping denunciations of a successful peace program which they envy but which they refuse to praise.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

TOURING PRESIDENT

More than anything else, Mr. Eisenhower's address last evening was designed to prepare a favorable climate for his visit to South America. And the effort was successful—to the extent that a speech can achieve such a purpose.

Three things concerned the President: First, he sought to reassure our neighbors to the south in the matter of the U.S. military power. In an oblique slap at his domestic critics, he said that our strength is so great as to command and justify the respect of "knowledgeable and unbiased observers" at home and abroad. He was also at pains, however, to explain why this country had felt compelled to sink so much of our national wealth in military weapons, and to give assurance that our military forces were designed to serve but one purpose—the maintenance of peace.

Next, Mr. Eisenhower emphasized our desire to extend a helping hand to our Latin American friends in bringing about a fuller life for everyone in the hemisphere. Finally, he struck hard at Communist claims that the United States has held Latin America in a colonial relationship.

It may seem strange to most of us here at home that the President should feel any need to stress these points. But sometimes, in our own conviction that we are doing the right and the decent thing, we take too much for granted the readiness of others to share our viewpoint. And this is especially the case, as Mr. Eisenhower put it, when "the lie and distortion" are used as instruments of diplomatic policy. In these situations it becomes necessary from time to time to put the record straight. This is what the President was undertaking to do in his talk last evening, and we hope he will be able to complete the job in the face-to-face discussions he will have with State officials in Brazil, Argentina, Chile, and Uruguay.

Secretary Flemming Calls Admiral Rickover Oversold on Soviet Education

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. RANDOLPH. Mr. President, on Tuesday, February 23 I placed in the Appendix of the RECORD an article by Bess Furman in which the New York (N.Y.) Times staff writer told of the reaction of U.S. Commissioner of Education Lawrence G. Derthick to the criticism of Adm. Hyman G. Rickover of the public school system of our country.

Today, Mr. President, I supplement that material with a news story in the Washington (D.C.) Post of Thursday, February 25 in which there is contained the response of Secretary Arthur S. Flemming, of the Department of Health, Education, and Welfare, to the views of Vice Adm. Hyman G. Rickover.

I ask unanimous consent that the article by Staff Writer Erwin Knoll be printed in the Appendix of the RECORD.

There being no objection, the news article was ordered to be printed in the RECORD, as follows:

FLEMMING CALLS RICKOVER OVERSOLD ON RED EDUCATION

(By Erwin Knoll)

Secretary Arthur S. Flemming of the Department of Health, Education, and Welfare said yesterday he thinks Vice Adm. Hyman G. Rickover "has been oversold on Russian education and undersold on our own educational system."

Flemming backed up his Commissioner of Education, Lawrence G. Derthick, who told a House appropriations subcommittee that Rickover's caustic criticisms of American schools are unfounded.

But Flemming conceded at a press conference that "our schools have serious defects that need to be remedied."

He illustrated that point by releasing a new survey of high school science facilities and equipment which showed that many students must work with completely inadequate materials.

The survey, conducted by the University of Toledo under a Federal research grant,

covered 233,000 science students in a representative sampling of 855 high schools in 7 States.

It showed that the average expenditure for science equipment and supplies last year was $2.66 for each science student.

"We can certainly afford to do a better job than this," Flemming said.

"Roughly 6 out of every 10 high schools had annual budgets for procuring science equipment, and about 5 out of every 10 had annual budgets for science supplies," the report noted.

The survey covered public high schools in Florida, Illinois, Massachusetts, North Dakota, Ohio, Wisconsin, and South Carolina. Schools in the Washington area generally have better laboratory facilities and more equipment than the average reported in the study.

The report said there were "many nonacademic programs in the schools visited for which adequate or generous funds were available per student participant, whereas funds for science education were meager and obviously inadequate in the same school."

Flemming said he thought the National Defense Education Act, which provides funds to strengthen science programs, should help improve the situation. He urged schools to take advantage of Government surplus science supplies available free.

Address by Representative William Jennings Bryan Dorn at Virginia Jefferson-Jackson Day Dinner

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, February 27, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Representative WILLIAM JENNINGS BRYAN DORN of the Third Congressional District of South Carolina, which he delivered at the statewide Virginia Jefferson-Jackson day dinner at the Hotel John Marshall, Richmond, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONGRESSMAN DORN ADDRESSES VIRGINIA JEFFERSON-JACKSON DAY DINNER

(Portion of the address of Congressman WILLIAM JENNINGS BRYAN DORN, principal speaker at the annual statewide Virginia Jefferson-Jackson Day dinner, at Hotel John Marshall, Richmond, Va.)

Mr. Chairman, as Democrats, we gather tonight in this critical hour in the history of our Democratic Party. Our party is at the crossroads. We either unite and move forward to a November victory or we flounder in defeat on the plane of agitation. * * *

In the early history of our country, as now, there were those who believed in a powerful Central Government. There were those then, as now, who worshiped at the shrine of Federal power. It would have been easy for Thomas Jefferson the aristocrat, easy for Jefferson the classical scholar, to become a political conformist and drift with the Federal tide. Jefferson was a man of principle who had great ideals and faith in the people. Jefferson was humble, honest, and considerate of the opinions of others. * * *

Thomas Jefferson's idealogy was pitted against that of the Federalist. * * *

When finally elected by the House and inaugurated, Jefferson, as President, did not follow a policy of vindictiveness, factionalism or sectionalism. He used his influence and prestige to promote unity, harmony, and the general welfare. He never forgot the man on the frontiers, the citizen in the log cabins nor the little shopkeeper and the small businessman. He never lost faith in the men at the grassroots. * * *

Jefferson launched our great Democratic Party as the party of the people. He led the people to a better understanding of themselves and their role in a democratic society. Jefferson educated the people to their duties and responsibilities. He led them to realize they were a part of America. They began to look upon the Government as their agent—created and supported by themselves. They became self-reliant and independent. They had confidence in themselves and local institutions. They became accustomed under Jefferson to a minimum of Federal Government. They revolted against the very thought of Washington paternalism. * * *

The Democratic Party became a symbol of States rights and individual freedom. Through lean dark years, it could always be revived again by a return to the principles of Jefferson and Jackson. Grover Cleveland, William Jennings Bryan, and Woodrow Wilson revived and rallied the party time and again to the old standards.

The Democratic Party has traditionally championed opportunity, sound currency, a minimum of Government, a balanced budget, and the Bill of Rights. Jeffersonian Democrats became liberals because they believed in the liberties of our people. In the South today, we are the true liberals. We believe in individual liberty, States rights, and local government. Jeffersonian Democrats became a symbol against centralized bureaucracy, excessive taxation, and stark Federal power. * * *

The national chairman of our great party has become the tool of these special interests, these pressure groups, these Machiavellian exponents of Federal dictatorship. Were Jefferson and Jackson alive today, they would flatly reject such a philosophy. They would oppose the powerful political machines with bloc voters, political slush funds, and ward bosses. They would be shocked to see some so-called Democrats controlled like sheep and cattle by pressure groups for the personal gain and greater glory of their leaders. This philosophy is not the philosophy of Jefferson, but of Mussolini. It is not the philosophy of Jackson, but more like the philosophy of Hitler and Lenin. This national Socialist clique is dedicated to a welfare state. They believe all planning and thinking for the American people can best be done in Washington. * * *

These powerful sources behind the national chairman are seeking to divide and conquer. They have left the party of Jefferson and Jackson. They do not believe in Jeffersonian democracy. They have adopted demagogy, intimidation, vindictiveness, and sectional discrimination. Their real purpose is to form a splinter party—to create a third party, a national Socialist labor party.

The late Congressman Vito Marcantonio outlined this plan to me many times. He said that we want all of you Jeffersonian Democrats and conservatives in one party, while us leftists and believers in Federal socialism should be in another party. Someday our party will come to power, and America will be launched into complete socialism with only one political party. This is the goal and objective of those using our national chairman. They have no hope of victory this year. They hope to promote another 4 years of the present administration. Then the time will be right for them to launch America into socialism.

Prime Minister Winston Churchill warned me about the danger of a conservative and a liberal party. After a liberal administration there is nothing a conservative administration can do to restore free enterprise. It is simply too late. The Prime Minister warned that there must be strong conservative elements in both political parties.

With a united Democratic Party we can win the Presidency this year. * * * We can only win with a united party and united effort in a common cause.

The Jeffersonian Democrats are willing to meet in the middle of the road on the basic fundamental principles and issues. We in the South are not asking all elements of the party to join us on the right. We only ask the national chairman to meet us halfway. We will never abandon our convictions and go all the way to the left. We do believe there is room in the middle. There is a common meeting ground. There are mutual objectives.

The South is going to Los Angeles in good faith. We are not going to run out or back out before the firing starts. We are going to be there and fight openly for the principles of Jefferson and Jackson. We will seek to nominate candidates pledged to the philosophy of Jefferson and Jackson. We do not expect to be thrown out nor do we intend to throw anybody else out. The South will be heard from when the platform is written. We will oppose vindictive planks in the platform. We will oppose the platform being written by pressure groups, racketeers, or those claiming to speak for minorities. We are going to reject and oppose sectional discrimination. We will fight for harmony, unity, and a middle of the road platform. If radical and Fascist elements gain control at the convention and throw certain Southern States out of the party, we will meet that tragedy when it arises with plans already formulated. We are determined to preserve the party of Jefferson and Jackson. We are determined to make every effort to preserve the freedoms of our country. * * *

The once sovereign citizen is being crushed today by burdensome taxation, confiscation, and loss of freedom by big government. Inflation has wiped out the lifetime savings of our people. Social security cannot pay the house rent. Unemployment insurance and bank savings have depreciated, causing hardship among the aged and the poor. Inflation has destroyed the purchasing power of the dollar. Our people live in constant fear of a Federal gestapo. They spend anxious days and sleepless nights worrying about the tax collector. They often pay the Government more than they should through fear and complicated tax forms. The Democratic Party must meet this challenge. * * *

The Democratic platform of 1960 should be positive. It should be forthright. It should put first things first. The greatest single issue before the American people today is one of survival. The Communist menace overshadows all others. It is a threat to the United States militarily, through subversion and through economic war. The Kremlin believes the United States will destroy itself by excessive spending and inflation. The American people are alarmed by this administration's apparent confidence in Khrushchev. This administration seems to forget that Khrushchev is a murderer, a ruthless killer of innocent people and is dedicated to world conquest. The great J. Edgar Hoover testified a few days ago before a Senate committee that the Communist Party in America, aided by the recent visit of Soviet Premier Nikita Khrushchev, is now "more powerful, more unified, and even more of a menace to our Republic * * * the recent visit of Khrushchev has done much to create an

atmosphere favorable to communism among Americans."

Khrushchev is being permitted to establish a base in Cuba, 90 miles from our coastline. His agents have incited riots in the Panama Canal Zone, threatening this vital link in Western commerce. The Communists have infiltrated Venezuela, thus threatening the all important Caribbean from the North and the South.

The Democratic platform must offer to the American people a clearcut and forthright foreign policy. We must reject appeasement and compromise. We must meet the Communist threat with the courage of Andrew Jackson. We cannot coexist with those sworn to bury us. We must warn our people of the utter hopelessness of summit meetings with those responsible for the crimes in Hungary, Poland, and East Germany. We must remember the pathetic Chamberlain and Daladier at Munich.

Our Democratic platform should call for the best defense in the world with a new world startegy geared to the missile age. If we are to survive, we must retain control of the skies and conquer space. Until the missile gap is closed, of course, our strategic air command should be partly airborne at all times. This is elemental and plain commonsense. Had our fleet at Pearl Harbor been seaborne, this disaster would have been averted. Billions can be saved in our national defense program by a consolidation of our missile program, a consolidation of our various air forces and a common supply system. * * *

Russian automobiles are being permitted to enter the United States. Textile mills are being built in Russia with American money, setting the stage for a flood of Communist goods made with Siberian slave labor. We must, as Democrats, meet this threat head-on, establish a trade policy that is truly reciprocal and save the American worker and American farmer from slave competition.

The Democratic Party platform must promise to eliminate waste and extravagance in foreign aid. We must reduce foreign aid. We owe more money that all the rest of the world combined. Our gold reserves have poured abroad. We are in a precarious fiscal position. While creating inflation at home, high taxes, and an ever increasing national debt, we are building up competiton abroad with our own workers and farmers.

The Democratic platform should contain a plank to free our farm families from Government control and depressing prices caused by these stupendous surpluses. The cattle farmer is relatively prosperous only because of a minimum of Government controls. Our farmers are forced to plant less and less while surpluses grow larger and larger. The family-sized farm must be preserved. Rural people have always furnished balance and stability to representative government. The Declaration of Independence, the Constitution, and the Bill of Rights were largely products of rural philosophy.

The Democratic platform must deal with the stupendous annual interest on the national debt, the national debt itself, and a balanced budget. We must offer some encouragement to the youth of our country by reducing the national mortgage on his future. * * *

The Democratic Party must reaffirm its faith in our capitalistic system of free enterprise. We must reaffirm our faith in the opportunity system that gave to America the highest standard of living ever known to man. We must guarantee to business less Government interference.

The Democratic Party, as always, must uphold constitutional government, State rights, and individual liberty. We must protect our people from an ever more powerful Executive, and over zealous Supreme Court, and now a World Court. * * *

With a candidate pledge to Jeffersonian democracy and this platform, we can win. Only 51 percent of the American people eligible to vote cast their ballots in the Presidential election of 1948; only 60 percent in 1956. With this platform, the unemployed glass workers, the chemical workers, and the coal miners of West Virginia and Pennsylvania will go to the polls. The textile workers and shopkeepers of New England will have an incentive to vote. The curtailed auto workers of Michigan, Indiana, and Illinois will take heart. Millions of farmers and small businessmen in the West and Midwest will vote for the first time in many years. They will vote Democratic. The housewife will be out on election day to protect her family from cheap money. The Democratic Party cannot win with a me-too platform. We must and can give the American people a clear-cut choice. We can win with the 40 million people who did not vote in 1956 because they had no choice.

One of the most glorious chapters in the history of our Republic was written by the magnificent Commonwealth of Virginia. The story of the Declaration of Independence, the Constitution, and the Bill of Rights is largely a Virginia story. Four of our first five Presidents were nurtured by the soil and environment of the Old Dominion. Four of the five greatest military commanders in the history of the Western World were Virginians. We cannot imagine the American Republic without Patrick Henry, George Washington, and George Mason. Your Thomas Jefferson, the founder of our great Democratic Party, is revered and loved by the whole free world. The visitors to our Nation's Capitol from the remote places of this earth pause at the beautiful Jefferson Memorial to pay homage to the memory of a Virginian dedicated to freedom. Millions from throughout the world read in hushed silence, "I have sworn upon the altar of God, eternal hostility against every form of tyranny over the mind of man."

Study of Export Credit Guarantees Now in Process

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, February 27, 1960

Mr. KEATING. Mr. President, a number of Government as well as private groups are presently engaged in drafting an export credit guarantee system for American industries participating in foreign trade. It is felt that such a system would significantly stimulate our export trade—and would in this way help to reduce America's increasing and widely discussed balance of payments deficit.

Mr. President, I have always been of the firm opinion that the promotion of exports is one of the most effective and logical approaches to our balance of trade difficulties. Senator JAVITS has taken an active role in this regard and it is my understanding that he intends in the near future to present measures to the Congress establishing an export credit guarantee system. The New York Board of Trade has also played an active part in developing a suitable credit guarantee system. I commend both my colleague and the New York Board of Trade for their leadership in this field.

Mr. President, because this is a complex and intricate subject and is one which has not been widely discussed, I was especially pleased to read a most interesting and informative treatment of this subject in the February issue of Economic World, "A Journal Devoted to the Free World's Search for Economic Progress." In order that others may have the benefit of this fine article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXPORT CREDIT GUARANTEE SCHEMES UNDER NEW STUDY

Are oversea markets for U.S. products restricted by the lack of credit facilities available to other exporters?

Both the executive branch and Congress are taking a close look at this question as they seek ways to boost U.S. exports and thus help to redress the currently unfavorable balance of overall payments between the United States and the rest of the world.

EIGHTEEN NATIONS OFFER CREDIT

Experts agree that it is much easier for an oversea importer to get short-term credit to buy from other countries than from U.S. exporters. At least 18 other countries have some system for providing 3-to-6 months credit to their own exporters or to guarantee private credit against losses. And though similar systems have been urged on the Congress and the executive branch repeatedly during past years, the proposals have not received serious consideration until recently.

Now it is reported that the Department of Commerce, with some support from the Treasury and the Department of State, is prepared to recommend some means of filling the gap in short-term credit facilities for U.S. exporters. Senator JACOB JAVITS, of New York, has announced that he will introduce a bill calling for the establishment of such a system; and the Senate Committee on Interstate and Foreign Commerce will hold hearings on the subject in mid-March.

Exporters, bankers, insurance executives, private economists, and Government witnesses will be called before the Senate committee to seek answers to these and other questions:

PROBLEMS INVOLVED

To what extent would better short-term credit facilities raise U.S. exports? Estimates so far vary from $50 million to $2 billion annually.

What categories of exporters especially need credit assistance? It has been suggested that small- and medium-sized firms exporting consumer goods suffer principally because neither they nor their importers can afford to finance adequate oversea inventories of so-called shelf items—while private bank credit is hard to come by or too expensive.

Should short-term export credits take the form of direct loans to exporters and importers or should there be a system of credit guarantees? Should guarantees cover normal commercial risks or just political risks? Should they take the form of insurance for the whole range of an exporter's activities or specific guarantees of specific shipments only? Should they apply to exports anywhere in the world or be limited to sales to the less developed countries?

Should a system of export credit guarantees be operated by the U.S. Government, by private institutions, or on a joint public-private basis?

Is new legislation needed or is the existing authority of the Export-Import Bank to

guarantee credits adequate? Officials of the Export-Import Bank are reported to believe that they already have all the necessary authority to guarantee against export credit risks, but are said to be reluctant to make greater use of their authority.

Some expansion of short-term credit facilities for U.S. exporters is now thought likely in the near future. Meanwhile, the Senate committee will be hearing witnesses on other aspects of U.S. foreign trade, including the effectiveness of trade promotion facilities abroad; foreign restrictions against U.S. goods; U.S. export restrictions; the impact of Sino-Soviet trade; and the implications for U.S. trade of the emerging regional markets overseas.

National Economic Policy Statement

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Saturday, February 27, 1960

Mr. SPARKMAN. Mr. President, an editorial entitled "Election Year Politics Plagues Economic Study" was published in the Mobile Register for February 16, 1960. I observe on the floor the distinguished Senator from Illinois [Mr. DOUGLAS], who is chairman of the Joint Economic Committee, which has been working very hard and has done excellent work in making an economic study. I assure the Senator from Illinois that the editorial does not apply to the study he and his committee have been conducting but, instead, to the President's committee—or shall I say the Vice President's committee? The editorial tells of the difficult time which that committee is having in arriving at any conclusion, because this is an election year.

Mr. President, I believe that the editorial will make interesting reading, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ELECTION YEAR POLITICS PLAGUED ECONOMIC STUDY

Election-year politics can be counted a prime factor in the trouble faced by the Nixon-headed Cabinet Committee on Economic Policy in agreeing on a national economic policy statement.

It may be denied not only by Committee members but by other sources in the Eisenhower administration that this is the case, but any such denials will be unconvincing.

On this Committee besides Vice President Robert B. Anderson, Agricultural Secretary Robert A. Anderson, Agricultural Secretary Ezra Taft Benson, Commerce Secretary Frederick H. Mueller, Labor Secretary James P. Mitchell, Postmaster General Arthur Summerfield, Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, and W. Allen Wallis, dean of the School of Business Administration at the University of Chicago.

The Committee began some time ago to issue a series of so-called educational papers discussing economic affairs, but has discontinued these reports and shifted its attention to preparing a policy statement that would extend to various fields, including taxes, spending, agriculture, labor, natural resources, and the like.

But the thinking within the Committee is revealed in news from Washington to be divided on the type of statement that should be issued. As one correspondent, Edward Cowan of the UPI, has summed it up, "Some voices maintain the Committee should merely issue a broad general statement on future economic policy," while "others would like it to be more specific."

A clue to the influence of election-year politics can be found in the reported position of Secretary of the Treasury Anderson that a Committee statement should refrain from saying too much about Federal taxes at this time.

"Anderson has been reluctant to discuss tax reform and reduction ever since President Eisenhower in January raised the possibility of a cut next year," Mr. Cowan relates. "He is reported to feel it would be premature and possibly would violate the administration's understanding with Democratic congressional leaders that it would be unwise to try to write a major tax bill in an election year."

In other words, choose the course of softpedaling on taxes because of politics.

The Committee is also believed to be having trouble in at least one other politically sensitive field—agriculture. This is hardly surprising, since the farm vote is always a political battleground in election years, more especially in years when control of both the White House and Congress is at stake.

President Eisenhower created the Committee a year ago under the name of "Cabinet Committee on Price Stability for Economic Growth," with one of its purposes being to search for ways to enhance productivity in the American economy.

Whether the activities of this Cabinet Committee will have any substantial value in any circumstance may be doubted. The odds, in fact, may be against it.

In the meantime, however, it is another disappointment to find that apparently the Committee has an ear tuned to politics in trying to work out a statement of policy with respect to economic matters. A statement strongly influenced by politics would have an obvious serious weakness. Actually, no statement at all would be preferable.

Farm Income of the United States Declines 16 Percent in 1959 From 1958; Drops to $11 Billion

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Saturday, February 27, 1960

Mr. RANDOLPH. Mr. President, on Tuesday, February 2, it was my responsibility to speak in the Senate on the shortcomings of the Eisenhower-Benson farm policies.

Mr. President, in my campaign of 1958 I predicted a decline in the farmer's prices. In reference to this prophecy—now become fact—I called attention to this problem in my speech of February 2. During those remarks I was joined in colloquy by the energetic Senator from Wisconsin [Mr. PROXMIRE], who indicated that the American farmer is left out of this Nation's general or so-called prosperity.

The New York Times of this date, February 27, carries a news article on page 1 with a headline which focuses attention on the plight of our rural economy. The story, "1959 Farm Income Off 16 Percent," comments on the net income of the farmers of the Nation in a drop of that figure from 1958. Last year the income was $11 billion. This was a drop from 1958 of $13,100 million.

I ask unanimous consent that a part of this news article from the Times be printed in the Appendix of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NINETEEN HUNDRED AND FIFTY-NINE FARM INCOME OFF 16 PERCENT—DECLINE TO $11 BILLION EXCEEDS ESTIMATE—PRICE DROP AND COST RISE BLAMED

WASHINGTON, February 26.—Final figures for 1959 showed today that farmers' net income dropped to $11 billion from $13,100 million in 1958.

DROP MORE THAN EXPECTED

The decline, amounting to about 16 percent, was slightly larger than had been expected. A smaller decline hae been predicted for 1960 by the Department of Agriculture. Last year's returns were about the same as in 1957.

Net income is the amount left to farmers from their farm operations after payment of production costs, taxes, and other expenses.

Income of persons living on farms from nonfarm sources rose about 6 percent between 1958 and 1959. The per capita income of persons living on farms, from all sources, was down 8 percent from 1958 but was higher than in any other year since 1952.

The 1959 decline is expected to be stressed by Democrats in this year's President and congressional campaigns in farming areas.

The decline in income reflected a combination of factors, including a downturn in farm product prices and a further upturn in farm production costs. Total cash receipts from farm marketing last year were estimated at $32,800 million, a decline of 2 percent from the previous year.

This loss in receipts reflected a 4-percent decline in the level of farm prices. This decline was offset in part by a 2-percent increase in the volume of crops and livestock marketed.

SOIL PAYMENTS DROPPED

The Department said farm production expenses rose 3.5 percent last year for a record. Government payments to farmers under crop control, soil conservation, and soil bank programs dropped more than a third because of the discontinuance of the acreage reserve part of the soil bank land retirement program.

Federal Money Should Be for Both Teachers' Salaries and School Construction

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. METCALF. Mr. Speaker, recently Mr. Eric Johnston, president of the Motion Picture Association and former president of the U.S. Chamber of Commerce, addressed the American Association of School Administrators'

annual convention in Atlantic City. Mr. Johnston prepared a brief of his remarks for the Gist, a newspaper especially published for the 20,000 educators who attended the convention.

Because Mr. Johnston is internationally recognized as one of America's foremost citizens, I believe that his forthright analysis of our Nation's educational problems and purposes will be of timely interest to all Members of Congress:

Sometimes it seems to me that almost everybody thinks he can make better films than the filmmakers. But if this is so for us, it's doubled in resounding brass for you. Is there really anybody anywhere who doesn't know he can run education better than the educators?

I'll reverse the trend this morning. I'm not going to tell you educators how to educate. I'm going to tell you what's wrong with education.

What's wrong with education is the shortsightedness of our National and State policies toward education—and not by any means an oversight on the part of our educators.

Today, we are told, we are the happy beneficiaries of the most affluent society in history. We have mass prosperity. We have mass culture. We have mass leisure. And we have a massive opportunity to lead the free world.

The whole world looks to us, we are told. But how do we look to ourselves?

With our historic success in building a free society, do we still cherish freedom above all virtues—and act as if we did?

With our devotion from earliest days to the individual, even to rugged individualism, do we still hold firm to this precept?

I have some positive feelings about the irrational plight of our schools, which ought to be the most truly rational institutions in our land. I shall discuss them in three broad areas.

First, the dollar sign. Second, the sound, fury, and nonsense of some of education's critics. And, third, a question, What are we educating for?

Now for the first, the dollar sign.

The problem can be stated quite simply. Too few teachers. Too few classrooms. Too many students for existing school facilities.

There are a number of solutions. One was proposed some time back by the author of Gulliver's Travels. His proposal, you'll recall, was simply to eat up the children.

I think there's a better solution than that. And that solution is money.

The Federal Government—that's where the money is. And that's where the money must come from. And it must be used not just for school construction—but for teachers' salaries and for more teachers.

Now for my second point. And here I would certainly like to turn off the oratory—because I think it is doing an unspeakable disservice to this country.

I'm talking about those orators who want to turn America's "little red schoolhouse" into a carbon copy of Soviet Russia's "Big Red schoolhouse."

We've made many contributions to the world. Certainly high among these are the theory and practice of universal mass education.

And before we listen to hoots and catcalls for selective schooling or the force feeding of some segment of knowledge, let's recognize that our doctrine of universal education is now emulated wherever possible around the world.

And now I come to the question, What are we edueating for? I have alluded to part of the answer already—that we are educating for a balanced and free and democratic society.

But there is something more. If we look clearly at our predicament of power and promise, I think we will find education's ultimate role—to achieve a world sense of unity in freedom.

Are these large words, hard-to-define words? Of course, they are. Freedom and democracy are never easy to grasp. They require literacy, understanding, basic concepts—all the tools that education supplies.

The kind of world we seek must be based on a sound underpinning of education. The nourishment of men's minds must accompany the nourishment of men's bellies.

South Dakota Federation of Women's Clubs Memorial Art Center

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. MUNDT. Mr. President, we have in South Dakota an organization known as the South Dakota Federation of Women's Clubs composed of women's clubs from all parts of the State. This dedicated, hard working group of women has been instrumental through the years in countless beneficial programs and activities that have greatly enriched the life of many South Dakota communities.

The latest project of these clubs has been a Memorial Art Center for the State of South Dakota. The need for a center to house South Dakota and Midwest art has long been recognized and the South Dakota Federation of Women's Clubs decided to do something about that need. As a result of their efforts such a Memorial Art Center is to be constructed in Brookings, S. Dak., on the campus of South Dakota State College.

Two articles in the current Art Center News published by the federation tell the history of the Memorial Art Center movement and describe the new center's modern, restrained design. I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

HISTORY OF MEMORIAL ART CENTER MOVEMENT

The South Dakota Federation of Women's Clubs has undertaken an immense project—the erection of a Memorial Art Center to honor the pioneer clubwomen of the State, and to perpetuate their work.

For more than 50 years the federation has been influential in movements for the cultural development of its members and the State in which they live. Years ago when the study of art was a common club program, the women began a collection of fine reproductions of paintings and art objects to be circulated and used for study by club members.

This collection, made up of fine prints and some originals has always been housed in Pierre, for a long time in the home of Mrs. S. C. Polley, who with several others, was very active in developing the work. When it became so large that it had to be moved, the free library commission, itself one of the important accomplishments of the South Dakota Federation of Women's Clubs, took over the storage. But Mrs. Polley and other members of the Pierre women's clubs still looked after the packing, checking and circulating of the pictures. It would be impossible to tell how much the federation and the State owes to the unselfish work of these Pierre clubwomen.

This collection has grown, and with the interest engendered by it, has been the inspiration for the establishing of a Memorial Art Center. It would keep alive the achievements and personalities of such women as Mrs. Polley and Mrs. Norman of Pierre, Miss Ada B. Caldwell of State College, Mrs. Lyon, the first president, and Mrs. Coombe, both of Sioux Falls, and many others whose devotion, vision and work have given the federation its growth and power.

In December 1948 the Pierre Women's Club presented a resolution to the official board asking that the federation sponsor the erection of a building as a memorial to the determined women who pioneered the women's club movement in the State, and that a room in that building be dedicated as an art center and as a memorial to Mrs. Lenore V. Polley who for many years devoted much of her energies to the development of the federation and the collection of art treasures. The Pierre clubwomen had in mind a building in Pierre to house the free library commission, as well as serve as federation headquarters.

A great deal of consideration was given to the resolution and many different plans were suggested. Miss Gertrude Null of Huron presented the idea of a building, built, owned, and controlled by the federation as an art center, to house the picture collection and other art objects which might be added to it, the location of such a building to be determined by the clubwomen themselves.

Resolutions to establish such a memorial were passed at the convention in Rapid City in October 1950, and a fund for the purpose was started shortly afterward.

It was necessary to select a location and the opportunity was given to towns and institutions desiring such a building to extend an invitation to the federation. Five places responded, Pierre, Huron, Spearfish, Vermillion, and Brookings. Each site offered the ground and landscaping, assistance in drawing plans and in publicity, supervision and maintenance of the building, if it could be used by the college or institution, such offers subject to the approval of the governing board and the legislature.

It was decided that the vote on these sites should be taken by mail, so that every club member would be given the opportunity to express her preference. The constitution of the federation had to be amended to make such a vote legal, and the art commission, Mrs. Hugh Stokes of Flandreau, chairman, felt that a great deal of publicity should be given the project before the final selection was made.

So it was not until November 1954 that a vote by mail was completed. A majority of all the votes cast was necessary for a decision. No one receiving such a majority, another election, this time between the two places receiving the highest number of votes, Brookings and Vermillion, was called in March 1955. The results were announced at the convention in Yankton, April 16, 1955. Brookings had received the majority.

The Regents of Education for South Dakota approved of placing the Memorial Art Center on the State College campus on June 23, 1955. A 2-day meeting of committees from the college and the federation was held in the Union Building. A site was selected and plans made for a fundraising campaign.

The building would be known as the South Dakota Federation of Women's Clubs Memorial Art Center. The federation and college administration would determine details of maintenance and supervision.

MODERN, RESTRAINED DESIGN

The memorial gallery will be one of the most imposing buildings of its kind in the Middle West. Its beauty will lie in the use of the finest and most enduring materials employed in a functional organization of fine proportion and restrained design.

The gallery will have a beautiful site on the State college campus. Pine and elm trees will frame the structure, and it will overlook the parklike "Commons" of the campus. The gallery proper will be a one-story structure of brick, glass, and steel in contemporary style.

Upon entering the building from the west, the visitor will find himself in a spacious foyer. Bronze plaques listing the pioneer families and friends of the gallery will be set in wall niches. This foyer will give direct access to offices, galleries and to a lounge, which is dedicated to the memory of pioneer women who have graced this State and contributed to its cultural heritage.

One large and two small galleries will be arranged as flexible parts of a single unit. Air-conditioning, lighting, and furnishings are being studied to enhance utility and beauty. The main gallery will contain permanent and long-term loan collections of fine painting and sculpture. A smaller room will house the work of South Dakota artists. Still another gallery will be used for the display of traveling art exhibitions, one-man shows by outstanding artists, and student and faculty exhibitions from South Dakota colleges. This room is to be flexible enough in design to accommodate meetings of small groups, recitals, and theatrical productions.

Plans call for a museum garden in connection with the building to be maintained by the State college horticulture department. A changing display of seasonal shrubs and flowers will be a showplace in itself.

The memorial gallery will be the home of the State Federation of Women's Clubs. Provisions are being made for offices, board rooms and kitchen facilities that will best enable the federation to carry on its work.

It is to be hoped that the gallery will be a fitting memorial to the people of our State and to the guests within our borders. The spirit expressed in its conception, and the courage and industry that will make it an actuality should make of the gallery a symbol of the high ideals and vision of a State whose roots are soundly embedded in the soil but whose aspirations reach the stars.

Resolution of Kentucky General Assembly Honoring Memory of Augustus Owsley Stanley

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a joint resolution adopted by the General Assembly of the Commonwealth of Kentucky honoring the memory of Augustus Owsley Stanley. Also, I ask unanimous consent to have printed, together with the joint resolution, the text of an address delivered by Kentucky State Senator Gates F. Young, sponsoring the resolution.

Augustus Owsley Stanley was six times a Representative in Congress from the Second District of Kentucky. He served as U.S. Senator and was Governor of Kentucky. He was for many years chairman of the International Joint Commission. He is one of the great statesmen of Kentucky.

There being no objection, the joint resolution and address were ordered to be printed in the RECORD, as follows:

SENATE RESOLUTION 5

Joint resolution honoring the memory of Augustus Owsley Stanley

Whereas Augustus Owsley Stanley, one of Kentucky's most illustrous sons, has heeded the call of his Creator ending a life of faithful service which reflected the highest honor upon him and contributed incalculably to the progress of this great State and indeed this Nation; and

Whereas the accomplishments of this statesman and incomparable orator were such that it is deemed fitting and proper that his memory be perpetuated by inscription of his biography upon the journals of the senate and the house of representatives as follows:

Augustus Owsley Stanley, six time representative in Congress from the old Second District, Governor of Kentucky, U.S. Senator, member and for many years Chairman of the International Joint Commission, was born in Shelbyville May 21, 1867, a son of the Reverend William and Amanda (Owsley) Stanley. His father was captain of a company in the "Orhpan Brigade" and also a Judge Advocate General in the Confederate Army, later becoming a minister of the Christian church. After attending private schools, Augustus Owsley Stanley entered Alleghany Academy at Nicholasville, Ky., continued his studies at the University of Kentucky (then State College) from 1886 to 1888, and was graduated with the degree of bachelor of arts from Centre College at Danville in 1889. The degree of doctor of laws was conferred upon him. He was a member of Omicron Delta Kappa honorary fraternity and Sigma Alpha Epsilon social fraternity.

Upon completion of his studies at Centre College he entered upon a career of school teaching, including 2 years at the old Mackville Academy, studying law at night, to the practice of which he was admitted in 1894. He followed his profession in Flemingsburg until 1898, when he moved to Henderson, Ky., where he continued his practice until 1924.

He entered the political arena by being selected a Democratic Presidential Elector from the Second Congressional District in 1900. He was elected to the 58th Congress in 1902 and served 12 consecutive years. During his congressional service he won nationwide attention by his vigorous endeavors on behalf of the tobacco growers of Kentucky, was sponsor of the legislation which brought about the regulation of the giant Tobacco Trust.

His stature locally and nationally was enhanced by his selection for the chairmanship of the congressional committee investigating the monopolistic practices of the United States Steel Co., in its acquisition of large deposits of iron ore in the Northern States.

On April 29, 1903, Congressman Stanley married Miss Sucan Soaper, of Henderson, and to this union there were three sons born—Augustus Owsley Stanley, Jr., William Soaper Stanley, and Marion Shelby Stanley, who, while a student at the University of Kentucky, lost his life in an airplane accident.

In 1915, following nomination by the Democratic Party, he was elected Governor of Kentucky and served in that office until May 18, 1919, at which time he resigned to enter the U.S. Senate, having been elected in 1918. His service in that august body which terminated on March 3, 1925, was marked by the same courage, honesty, and dedication of purpose which was characteristic of his service as a Congressman and as Governor of the Commonwealth. Upon leaving the Senate he entered the practice of law in Washington, the Capital of our Nation, in association with Joseph P. Tumulty, former secretary to President Woodrow Wilson. In May 1930 he was appointed a member of the International Joint Commission, and became chairman of that body on March 7, 1933, in which position he served until 1954.

He was a member of the Christian church, the Benevolent and Protective Order of Elks, and of the Pendennis Club.

Augustus Owsley Stanley was a dedicated, unrelenting, nondeviating, and most articulate champion of democracy having upon at least one occasion given voice to his philosophy in these terms:

"Democracy with me is more than a conviction—it is an abiding faith and now I reverently dedicate 'the bitter little that of life remains' to the service and the success of democracy. And when the tale is told and the journey ended, I shall not have repaid the debt to the people I devoutly love and to the cause I shall maintain until my arms are palsied and my tongue is stilled in death."

Truly, it can be said of Augustus Owsley Stanley that he was one of the

"Tall men, sun crowned, who live above the fog,
In public duty, and private thinking."

And one of those—

"Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions, and a will;
Men who have honor, who will not lie."

Now, therefore, be it

Resolved by the General Assembly of the Commonwealth of Kentucky:

SECTION 1. That when the senate and the house of representatives do this day adjourn they do so in memory of Augustus Owsley Stanley.

SEC. 2. That the general assembly does hereby extend to the family of Augustus Owsley Stanley its profound and deepest sympathy and does commend the members thereof to Almighty God who is forever near to those who trust Him for solace.

SEC. 3. That the clerk of the senate cause copies of this resolution to be transmitted to each of the Members of the Congress representing the Commonwealth of Kentucky with the request that a copy thereof be spread upon the record of proceedings of the Senate and the House of Representatives and made a part of the CONGRESSIONAL RECORD.

SEC. 4. That a copy of the journals of the Senate and the House of Representatives wherein this resolution is recorded be presented to Mrs. Susan Soaper Stanley, Mr. Augustus Owsley Stanley, Jr., and to Mr. William Soaper Stanley.

Attest:

JOHN W. WILLIS,
Chief Clerk of the Senate.

ADDRESS BY SENATOR GATES F. YOUNG SPONSORING A RESOLUTION REVERING A. O. STANLEY, STATE SENATE, JANUARY 14, 1960

Mr. President, in the closing hours of Tuesday, August 12, 1958, the Master Architect, Creator and Builder of the Universe, in His infinite wisdom, called from his earthly associates the soul, and stilled the voice of

Augustus Owsley Stanley, one of Kentucky's most illustrious sons.

In presenting this resolution I not only seek to have the memory of A. O. Stanley inscribed upon our records, but I do honor to myself and refresh the memory of this great Kentuckian in the hearts and minds of some other of "his boys."

I am one of "his boys." He had many others throughout the width and breadth of Kentucky. Among them our present highway commissioner, Senator Earle Clements; our former commissioner of economic security, V. E. Barnes; and our lovable and capable colleague, the senator from Fleming, who served as a page in the house of representatives in 1916, while the incomparable Stanley was Governor. And not the least of them Emerson Beauchamp, our commissioner of agriculture.

Had I the vocabulary of a Webster or Churchill my attempt to pay proper respect to the late Augustus Owsley Stanley would still be feeble and inadequate.

He was one of the great of his time.

Born in 1867, when Andrew Johnson was President, his life spanned three epochal eras. He lived through the service of 17 Presidents of the United States. Thirteen States were admitted to the Union during his lifetime. The new State of Alaska was acquired from Russia. The Southern States were readmitted to the Union. The 14th, 15th, 16th and 17th amendments to the Constitution were adopted. The east and west coasts were tied together with spans of steel by the opening of the Union Pacific Railroad.

Edison announced his phonograph and introduced the electric light.

The first telephone exchange was installed.

The French Atlantic cable was laid.

Brooklyn Bridge was opened; Statue of Liberty unveiled.

The Spanish-American War was fought.

The prohibition amendment adopted and repealed.

The woman suffrage amendment adopted.

U.S. Navy fliers circled the globe, and the North Pole reached by Navy plane.

Yes; during the 91 years of his life, our country abandoned its swaddling clothes and became great, as he grew and became great.

Kentucky has had its Clays, Carlisles, Breckinridges, Bradley, and Morrow, but none excelled Stanley.

God anointed his vocal cords with the roar of thunder; the sharp whiplike clap of lightning; the softness of the coo of contentment of a baby in its mother's arms, and the silver and golden glow of the morning and evening skies.

In public service he fought the battles of the Kentucky tobacco farmer against the Tobacco Trust—the battle of the American steel users against the Steel Trust.

The freedom of the peoples representative in these legislative halls from domination by outside influences.

Courage had no man in public or private life to a greater degree.

He forced the passage of Kentucky's anti-pass law.

He saved the life of a Negro murderer from a mob in one of our western counties with his great persuasive language, thus avoiding a stain upon the Commonwealth's name.

Like an armed warrior, like a plumed knight, he marched through life and threw his shining lance full and fair against the foreheads of his adversaries.

Under the headline "Giant of the Stump—A. O. Stanley Was Last of the Great Orators of Kentucky Politics."

Our own beloved Allen Trout closed his article with this moving and appropriate language:

"From the hundreds of thousands of golden words spoken by Governor Bradley, one short passage was selected to carve above his grave in Frankfort Cemetery, near the graves of Stanley and Morrow.

"This passage is a tingling classic. It is his benediction upon the throng which gathered June 12, 1910, to hear him dedicate the magnificent new State capitol, on an eminence across Kentucky River from the cemetery bluff where he and Stanley and Morrow are entombed.

"May we not now, in fancy, turn it into an epitaph for the fresh-buried Stanley and his two matchless peers, already back to the dust from which they sprang? Here is Bradley's benediction:

" 'May the summer's sun shine brightly, and the winter's snows fall lightly as they deftly weave their white mantle above you. May the tempests abate their fury as they sweep over you. May the springtime entwine its most beautiful garlands above you; and may each of you, reunited with your loved ones in that realm beyond the stars where summer's heat and winter's cold are unknown, where the grass never withers and the flowers never fade, abide in His presence forever.' "

Kentucky's beloved Stanley has crossed the river to the Celestial City. But, the life and deeds of A. O. Stanley linger in the memory and affection of a multitude of Kentuckians.

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. SPARKMAN. I have just read an article in the N.A.R.D. Journal, published by the National Association of Retail Druggists, reporting an exclusive interview by Mr. J. Edgar Hoover on the subject of "Juvenile Delinquency." It is an excellent article. Mr. Hoover has offered some sound, sensible advice for curbing one of our most serious, current social problems. I recommend its reading to all Senators and to everyone interested in this grave problem. It is for this reason that I ask unanimous consent beginning on page 38 and continued on page 42 of the 1959 issue of the N.A.R.D. Journal be printed in the Appendix of the RECORD.

This interview was conducted by Mr. Philip F. Jehle, Washington representative of the N.A.R.D. Most Senators will remember Phil. He served for several years as counsel for the Senate Small Business Committee, later becoming its general counsel. As chairman of the Senate Small Business Committee, I had the pleasure of working very closely with Phil. He is an able person and I am sure he will do a good job for the druggists.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON INTERVIEW—J. EDGAR HOOVER DISCUSSES JUVENILE DELINQUENCY

(By Philip F. Jehle)

Beginning with this issue, Mr. Philip Jehle will be bringing every month to readers of the N.A.R.D. Journal an interview with an outstanding Washington personality. Both the person to be interviewed as well as the topic to be discussed will be carefully selected on the basis of general appeal to the Nation's independent pharmacists.

In this, the initial interview of the series, Mr. Jehle questions Mr. J. Edgar Hoover, longtime FBI chief and one of America's greatest citizens, on the subject of juvenile delinquency, a problem having special significance to drug retailers across the country. As readers will note, Mr. Hoover first contributes a keen and objective analysis of juvenile delinquency and then offers some sensible and constructive advice on how the problem may be dealt with objectively.

We are sure retail druggists will find Mr. Hoover's views on this important subject most stimulating.

Mr. Jehle: "Good morning, Mr. Hoover. It is indeed a pleasure to be here discussing with you a subject of special significance to family pharmacists across the Nation. We appreciate very much your taking time from an extremely busy schedule to visit with a group of small businessmen."

Question: "Would you mind, sir, telling us just how you view juvenile delinquency?"

Mr. Hoover: "A few years ago when one mentioned juvenile delinquency, he meant just that—delinquent behavior on the part of youngsters. This consisted of such simple misbehavior as 'playing hooky' from school, indulging in an occasional fist fight, or engaging in the mischievous vandalism of writing on fences and sidewalks or breaking a window or a street lamp.

"Today's so-called 'juvenile delinquent' commits armed robbery, assault, and murder. His 'occasional fist fight' is now planned, vicious street warfare and in place of his fists he is armed with a knife, a gun, a chain, or any other weapon he can use effectively."

Question: "How serious is the problem of juvenile delinquency?"

Mr. Hoover: "On the basis of uniform crime reports submitted to the FBI by police throughout the United States, we know that the incidence of crime is increasing. In the year 1958, arrests of persons under age 18 increased 8.1 percent over the previous year while arrests of adults in the same period rose only 1.8 percent."

While it is true that youths under 18 represent only 12.1 percent of all persons arrested, they were the subjects of 64.1 percent of the arrests for auto theft, 49.9 percent of those for burglary, 48.5 percent of those for larceny, 30.9 percent of those for receiving or possessing stolen property, and 22.8 percent of those for robbery.

Most alarming is the fact that not only the frequency of youth crimes but the savagery of these offenses is mounting day by day, year by year.

Question: "Has the FBI found that juvenile delinquency is largely limited to any particular area of the United States?"

Mr. Hoover: "The problem of youthful crime exists not only in the densely populated metropolitan centers but in each and every community in the land. And the intensity of the problem in each area is as great or as small as the people themselves permit.

"I am convinced that the community which takes positive and determined action against the juvenile offender—the community which leaves no doubt in the mind of the youngster as to just how far he can go and how much he can get away with—will make the greatest inroads in the juvenile crime problem today and in the future."

Questions: "Mr. Hoover, to bring this problem closer to drug retailers, I have one very important question for you. Are pornographic magazines and other like materials a factor in juvenile delinquency?"

Mr. Hoover: "The peddlers of obscene pictures and writing have so flooded the market with this toxic trash within the past few years that to find a news rack without samples of it is the rare exception. Distribution of pornographic material prepared especially for juveniles is now so efficent that no child is beyond its reach. Blatant displays of sex

and violence, printed filth and so-called comics which glorify crime and dwell upon horror can only create a climate calculated to encourage delinquency.

"Add to this the practice in too many areas of placing increased commercial emphasis on questionable merchandise. For example, entire window displays formed of guns, knives, and other weapons of violence—attractive lures to the immature and inquisitive youth. Surely no one can doubt that this brazen and vulgar trash can do other than degrade impressionable young minds."

Question: "What would you say, sir, is at the root of the juvenile crime problem?"

Mr. Hoover: "I believe that this problem is the result of an abdication of authority in many areas, foremost of which is the home. The prevention of juvenile delinquency lies in the establishment of juvenile discipline.

"Human beings need rules to live by—children as well as adults. The home is the first training arena in the battle between right and wrong, and the success or failure of this training plays a vital role in the child's developing character.

"When we hear of a youthful offender who is described as one of eight children residing with his family in a two-room cold water flat in a tenement area whose parents both work, we do not wonder that he has gotten into trouble. Nor does it seem strange when we learn that the 8-year-old second-story 'man' arrested by police as he attempted a break-in around midnight receives no discipline from his parents and is permitted to roam the streets at will. Likewise, it seems perfectly logical to each of us that the 10- and 12-year-old vandals who break into schoolhouses and private homes commit acts of destruction amounting to thousands of dollars receive little or no supervision or control at home.

"When the home fails, however, we cannot merely shrug our shoulders—help must come from other sources, the church, the school, the entire community. The juvenile delinquent problem we have today is the tragic consequence of such public apathy.

"Equally tragic is the tendency of far too many individuals to treat delinquency with hushed silence, sentimentality, and excessive leniency. Such action, in my opinion, tends to encourage potential offenders. The so-called delinquent of today engages in acts of torture, sadism, murder, and gang warfare. In other words, he is a vicious young criminal and he should be treated as such."

Question: "Is there, then, a 'cure' for juvenile delinquency?"

Mr. Hoover: "There is, of course, no 'cure' for juvenile delinquency, but neither can we permit it to go unchecked. Action can, and must, be taken to reduce the incidence of juvenile crime.

"We have already seen sufficient evidence of the fact that any treatment which encourages the recipient to believe he will not be held accountable for his acts also encourages him to believe he is above the law. If we are to discourage the repetition of such acts, it is high time that we showed these young hoodlums that the consequences of their crimes will be swift, sure, and adequate punishment."

Question: "In the light of your intensive experience, Mr. Hoover, what role can the Nation's independent druggist play in curbing juvenile delinquency?"

CHALLENGE TO AMERICANS

Mr. Hoover: "I would say that the challenge of crime today is flung squarely in the face of every American. The alert community recognizes the extent of the cancer of delinquency—more properly, juvenile crime, in its midst. If it is fortunate, it will find an individual or a group willing to take the lead in seeking the most effective cure. Your retail pharmacists constitute such a group. What can you do? What will you do?

"You can encourage and participate in religious training and assist churches in setting up leisure-time programs for youngsters.

"You can take the lead in helping to keep your community free of printed filth and thereby help to make a decent environment for children.

"You can lend your support to movements designed to secure adequate salaries for qualified teachers and sufficient facilities for modern school systems."

Mr. Jehle: "Thank you very much, Mr. Hoover."

Rights—With Responsibilities

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, February 27, 1960

Mr. MUNDT. Mr. President, Mr. Richard A. Devereaux, vice president and general manager, Northwestern Bell Telephone Co., Sioux Falls, S. Dak., has brought to my attention a splendid article that appeared in the September 1959 issue of nwb, the employees' magazine of the Northwestern Bell Telephone Co. It is entitled "Rights—With Responsibilities," and elaborates on a company policy of Bell Telephone to encourage civic mindedness and civic activities of their employees.

Such programs on the part of organizations and businesses and groups of all kinds should be encouraged. The unbiased search for the right path and true information on the part of wider sections of the public will result in many benefits to our local, State, and Federal Governments and to all of us as individual citizens.

The clear and concise interview printed in this article with Mr. A. F. Jacobson, president of Northwestern Bell Telephone Co., is a splendid outline of the duties and responsibilities of an individual and a business in a democracy. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIGHTS—WITH RESPONSIBILITIES

(In the statement below and in the following interview President A. F. Jacobson gives his views on the responsibility we have, as American citizens, to take an active part in public affairs.)

As citizens of a free and democratic country—and as employees of a privately owned and operated business providing a vital public service—we possess many precious individual rights which carry certain obligations. Preservation of these rights and their continued enjoyment require an understanding of their significance and the responsibilities they impose. A general lack of interest in governmental affairs, failure to exercise citizenship privileges, and failure to assume our individual share of responsibility for the success of our democracy can only weaken it and threaten loss of liberty and freedom.

We Americans face many serious problems both at home and abroad. These require good judgment and decision at all levels of government—national, State, and local. Success in meeting these important problems in a Nation such as ours makes it necessary that people assume responsibility for public and governmental affairs and have the knowledge necessary for sound judgment and action.

For these reasons, we believe that telephone people should be encouraged to take greater interest in civic, political, and governmental affairs. It is hoped that through these measures each of us will become a better citizen and contribute to making this country, as well as our cities and States, a better place in which to live.

I should be clearly understood that the company management undertakes this activity wholly on a nonpartisan basis. The company's principal objective will be to encourage individuals to meet their citizenship responsibilities, to provide information on the functioning of political parties and the operations of Government, and to assist its people in obtaining information on important public issues. The public nature of our business may, on occasions, affect the etxent of our individual participation in some situations.

The company will continue, of course, to take whatever action is proper or appropriate to protect the service and the interests of telephone users, employees, and the owners of the business.

Efforts to encourage and assist employees toward a great interest and participation in public and governmental affairs will include such activities as the following:

Information will be made available to employees on important public issues of local, State, or national interest, where practicable. When significant differences of opinion exist, information on all sides of such issues will be supplied.

The company has no intention of preaching to employees or attempting to dictate what their attitude should be on public matters. Rather, we will strive to make significant information available and encourage employees to make up their own minds. To this end, we will, when appropriate, obtain and make available the views and expressions of individuals not connected with the business whose knowledge and understanding of public issues are well recognized.

Information will be made available as to how governmental and political organizations function, and the activities through which each of us can participate in the political life of the community.

Encourage telephone people to register to vote (where registration is required), to exercise the right to vote, and to support the political party of their choice.

Encourage telephone people to take an active interest in civic affairs and to support those institutions and activities devoted to the betterment of the communities in which we live.

Where it develops that employees might have occasion to become involved as holders of important public or civic positions, it is suggested that they counsel with their supervisor to make sure that (1) the telephone job will not suffer, and (2) the employee's affiliation with the telephone company will not interfere with a satisfactory performance of any public duties.

INTERVIEW

Question: "What do you mean by the term 'public affairs'?"

Answer: "In a very broad sense, I think of public affairs as embracing the wide range of civic, political, and governmental activities through which the society in which we live functions. Such activities are of real and continuing significance to each of us as individuals and to the welfare of the country. These are the spokes of the wheel of democracy in action.

"Fortunately we live in a free country. We have the privilege of participating in the processes of government and of general community activities—a privilege denied to people in more than one-half of the world. The democratic approach to government was designed to give expression to the wishes and desires of all the people. It can succeed in this objective only to the extent that people maintain interest and take action in it."

Question: "Does the action of just one individual count for anything?"

Answer: "That's all that counts. Every action or vote taken is merely the adding up of individual decisions. That's why it is so important in a free and democratic country that there be widespread attention to and interest in public matters. In this way the views of the majority of the people are made known and find expression through our elected representatives."

Question: "As an individual, what should I be doing?"

Answer: "Be a good citizen—by that I mean take real interest in matters of importance to your community, your State, and the country. More specifically, it includes such things as:

"Voting at all special, primary, and general elections.

"Supporting the political party of your choice—working for it—contributing to it.

"Working for the election of and supporting qualified people to represent you in public office.

"Keeping yourself informed on important problems confronting your city, State, or the Nation.

"Supporting worthwhile civic activities."

Question: "Is it contemplated that telephone people may become involved in controversial matters?"

Answer: "There are few, if any, issues that are not controversial to some extent. Telephone people will be encouraged to take part in all political processes, to support the party of their choice and to work for the election of people they believe will best represent them in government. To the extent that this requires taking a stand in controversial matters, such actions are an essential part of the democratic process."

Question: "What does the company mean by its being 'nonpartisan'?"

Answer: "In the first place, corporations are not permitted by law to engage in partisan political activities nor to contribute to political parties or candidates. It must remain wholly impartial. Also, the company recognizes that employees are free to make their own individual decisions on political or public matters. This is a fundamental of democracy."

Question: "What is meant by the statement 'The company will continue, of course, to take whatever action is proper or appropriate to protect the service,' etc.?"

Answer: "Obviously, the company has an obligation to protect the interest of those directly connected with the business—that is, telephone users, employees, and owners. As we all recognize, it is the desire of the company to be a good corporate citizen, to willingly meet its public responsibilities and its fair share of the general tax obligation. However, when it becomes apparent that telephone service is being asked to assume more than a fair share of the tax burden or is being unduly penalized in other ways, the company will consider it a duty to speak out in its own defense and in the interest of those it serves.

"For example, as a company we oppose the Federal excise tax on telephone services because this tax represents an unfair cost burden on the users of telephone service."

Question: "Is the company's interest in public affairs intended to benefit any particular group?"

Answer: "Absolutely not. The primary purpose is to stimulate each of us as individuals to a greater interest and participation in political and public activities. There is no intent to favor or disfavor any segment of society in comparison to any other. The company is confident that this country can be best served by an informed citizenry actively participating in the processes of government. That is the cause we are trying to serve in these efforts."

Question: "Will our emphasis on public affairs be choosing sides on some public issues?"

Answer: "There are, of course, at least two sides to any question that reaches the stage of being an 'issue.' The aim is to present information on these various sides in as conscientious a way as we know how. Generally this information will not 'choose sides' because this is not the best way to help people examine a subject to the point where they can make up their own minds about it. But the pro and con sides of most issues are rarely in balance. In the case of some issues, the objective will be to establish an understanding of the problem and of possible answers to it."

Question: "From a company viewpoint, are there limitations as to the kind or amount of public or political activity in which an individual employee may participate?"

Answer: "Any such decision rests with the individual. It is contemplated that such activities, in general, would be carried on by the telephone person outside of his working hours. They should not interfere with performance of the regular telephone job.

"There may be situations where employees elect to assume extensive public duties where a temporary furlough from his telephone job will be in order. There are legal reason why a company may not permit employees to engage in partisan political activities on company-paid time."

Question: "In what form will information on public issues be made available?"

Answer: "The Northwestern Bell magazine will carry information pieces of this kind. Some will reflect the views of people outside the business who are acknowledged authorities on certain issues. When possible, such articles will present the various views toward a subject. Another avenue for distribution of this type of information is our bookracks. Information on some subjects probably will be presented through a publication solely concerned with public affairs. Employee discussion meetings are still another possibility.

"There are, of course, a great many sources of information on public matters—daily newspapers, magazines, radio and television programs. One of the hoped-for values of this effort is an increased awareness that will encourage telephone people to look more closely and more interestedly at current news."

Question: "Is there more need for interest and action in public affairs now than in the past?"

Question: "Effective citizenship has always required an interest in public affairs. But it is especially important today because many of the problems that face government are bigger and more complex than in the past. This is true from the community level on up to the Federal level. Much community planning—for example, on streets and highways, schools, housing, and conservation—must now be fitted into Federal and State programs. Our Nation's policies and actions must more and more be decided on an international rather than a national basis. Another reason interest of this kind is so greatly needed now grows from the challenge of communism. We have to prove through sound judgment that we value our freedoms enough to think and work for them."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate continued debate on civil rights.

Senate

Chamber Action

Routine Proceedings, pages 3337–3342

Bills Introduced: 12 bills were introduced, as follows: S. 3109–3120. Pages 3338–3339

Bill Reported: Report was made as follows: S. 2311, providing for hospitalization at St. Elizabeths Hospital in the D.C. of certain U.S. nationals adjudged insane in foreign countries (S. Rept. 1143). Page 3338

Public Land for School Purposes—Civil Rights: Senate continued consideration of H.R. 8315, directing the Secretary of the Army to lease certain property in Missouri for school purposes.

Pending at recess was Long amendment to first branch of Dirksen amendments (in nature of a substitute for the bill) comprising "Civil Rights Act of 1960." The Long amendment would add proviso that no person shall be prevented from exercising his freedom of speech to advocate separation of races or that forcible integration of races is undesirable and should be resisted by all legal means. Pages 3342–3417

Legislative Program: Majority leader announced that Senate will meet at noon Monday, February 29, instead of at 10 a.m. as previously announced, in order that any committees desiring to meet Monday morning may do so. Page 3417

Quorum Calls: During Senate proceedings today five quorum calls were taken, which appear on pages 3340, 3409, and 3413–3414.

Confirmations: The following nominations were confirmed: 2 civilians, including that of Alan S. Boyd, of Florida, to be member of CAB; 217 in the Coast Guard; and 39 in the Coast and Geodetic Survey. Pages 3417–3418

Program for Monday: Senate met at 10 a.m. and recessed at 5:46 p.m. until noon Monday, when it will continue on H.R. 8315, to lease certain public land in Missouri for school purposes. Page 3417

Committee Meetings

No committee meetings were held.

House of Representatives

Chamber Action

The House was not in session today. Its next meeting will be held on Monday, February 29, at 12 o'clock noon, when the second supplemental appropriation bill for fiscal year 1960 will be considered.

Committee Meetings

No committee meetings were held.

Congressional Record The public proceedings of each House of Congress, as reported by the Official Reporters thereof, are printed pursuant to directions of the Joint Committee on Printing as authorized by appropriate provisions of Title 44, United States Code, and published for each day that one or both Houses are in session, excepting very infrequent instances when two or more unusually small consecutive issues are printed at one time. ¶ The Congressional Record will be furnished by mail to subscribers, free of postage, for $1.50 per month, payable in advance. Remit check or money order, made payable to the Superintendent of Documents, directly to the Government Printing Office, Washington 25, D. C. For subscription purposes, 20 daily issues constitute a month. The charge for individual copies varies in proportion to the size of the issue. ¶ Following each session of Congress, the daily Congressional Record is revised, printed, permanently bound and is sold by the Superintendent of Documents in individual parts or by sets. ¶ With the exception of copyrighted articles, there are no restrictions on the republication of material from the Congressional Record.

Appendix

Meet the New Boss of the Marine Corps

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, February 29, 1960

Mr. MANSFIELD. Mr. President, Sunday, in the Star magazine, February 28, 1960, there appears a very interesting article entitled "Meet the New Boss of the Marine Corps," by A. L. Singleton.

In this article we find a brief sketch, a capsule sketch, so to speak, of the new Commandant of the Marine Corps, which I commend to the Senate for reading.

It gives a fairly brief sketch of his background, his activities in the Corps and, in effect, indicates what may be expected of him. There is no doubt in my mind, Mr. President, but that Gen. David M. Shoup, the present Commandant of the Marine Corps, will fulfill the pattern which has been set by his 21 predecessors, and that in his hands the Marine Corps will be ready and fit to go at any time under any circumstances.

Mr. President, I ask unanimous consent that the article referred to be incorporated in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEET THE NEW BOSS OF THE MARINE CORPS
(By A. L. Singleton)

You hear it said often these days that America's young men are soft—and getting softer.

Maybe. But a man who has the job of keeping 175,000 young men ready to fight for their country at a moment's notice is not worried about their fitness.

"I can't speak for all the young men, of course," declares Gen. David M. Shoup, new Commandant of the Marine Corps, "but in our case, we're turning out a better product than ever.

"Why, there's no comparison between the Marine Corps of 1926, when I went in, and the Marine Corps today. The improvement has been staggering."

General Shoup, a graying, bespectacled man of medium height and stocky build, became the 22d Commandant January 1, the day after his 55th birthday. He was lifted by the President over a number of senior officers to succeed retired Gen. Randolph McC. Pate.

The Commandant lives in a 155-year-old mansion at the Marine Barracks, Eighth and I Streets SE., where he and Mrs. Shoup are just getting settled for a 4-year residence.

One of their two children, Robert D. Shoup, a Commerce Department mapmaker, lives with his own family in Arlington. A daughter, Mrs. Joel Watkins, is married to an ex-marine now studying at the University of Texas.

The Commandant's office is in Arlington's Navy Annex, where he wears civilian clothes as often as a uniform, and seems more a business executive than boss of the Marines.

"His manner is mild," an associate says. "But don't let that fool you. Inside, he's as tough as nails."

The toughness was demonstrated frequently during World War II, in which he won many decorations, topped by the Congressional Medal of Honor for heroism in the Battle of Tarawa.

Among his fellow marines, he is known as a firm but fair officer, and a man of few words, a reputation that grew out of proportion during interviews following his appointment as Commandant.

Resulting newspaper stories referred to him as "terse" and "tightlipped," whereas his friends and family consider him softspoken and mild, if not garrulous.

"I admit the reporters got me wrong," he says. "But they asked me such questions as, 'Why do you wear glasses.' And I replied, 'That I may see better.' Now how are you going to be anything but terse when you are asked questions like that?

"Besides, I believe when people need information, they usually don't want a dissertation."

The general was born in Battle Ground, Ind., a coincidence that has not been overlooked during his fighting career. He was graduated from De Pauw University, which makes him not only the sole Commandant from that school, but one of the few Marine chiefs of recent years who did not graduate from the Naval Academy or VMI.

Before a recruiting letter from Gen. John Le Jeune (then Commandant) sold him on the Marines, he was thinking of becoming a teacher. And before he became a Marine, he served briefly in the Army Reserves.

Once in the corps, however, he developed into the kind of leader that caused observers to trot out such timeworn terms as a "a Marine's Marine" to describe him.

It was generally understood within the organization that when a mean job had to be done, "Dave" Shoup was likely to do it—and well.

In his 33 years of service, he has touched most Marine bases. Twice in China, at sea, temporarily with the old Civilian Conservation Corps, and at U.S. posts from Quantico to San Diego, he rounded out his pre-World War II career in Iceland.

In the Pacific soon after the shooting started he saw action at Guadalcanal, New Georgia, Saipan, and Tinian, as well as Tarawa, picking up a pair of Purple Hearts in the process.

One of these came with his Medal of Honor. As a colonel in command of the Second Marines, he rallied his troops in spite of the shell-shock and a severe leg injury, and led them across the reefs, through water that ran pink with blood, and onto tiny Betio Island, where he directed counterattacks that finally overran the heavily fortified Japanese in 2 days.

Asked if he thought this was the toughest of his battles, the general replies: "I've never fixed on any one battle. When you talk about tough battles, it all depends on who's talking and what you're talking about. You can say one was rougher than another because more men were involved, for instance, but any battle can be rough for a given fighter."

In postwar years, General Shoup was often deskbound, but never idle.

In 1956, the corps was rocked by the drowning of six recruits at Parris Island, S.C. A drill instructor, Sgt. Matthew McKeon, was charged with leading a death march through a swamp while under the influence of alcohol.

In the wake of the public uproar that followed, General Shoup was tapped for the job of heading and reorganizing, if necessary, all Marine recruit training.

As the corps' inspector general, he carried his campaign to the front lines. He went to the recruits themselves.

"I talked to the boys at rail depots, when they were on their way home from training," he recalls. "They had no idea who I was, because I didn't tell them and I was in civilian clothes."

Within months, recruit training changed.

"But we substituted nothing that was weaker," the general points out. "The really great drill instructors did not rely on knocking people about to get discipline. They stood as personal examples.

"Sooner or later in this life of ours, a man has to learn two things: to recognize and respect duly constituted authority and to get along with others. We teach both these things in recruit training now without physical violence of any kind."

He is convinced that Marine training now, as it has in the past, will produce the kind of fighter the country must have.

"I think there will always be a need," he says, "for men who are able and eager to go, in any transportation available and under any conditions, to meet any enemy, with a built-in will to win. And that's the kind of men we're turning out."

Postal Employees Urge an End to Airlift of First-Class Mail

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. CUNNINGHAM. Mr. Speaker, I recently received a copy of a resolution which was unanimously adopted at a meeting of the Spokane branch, National Postal Transport Association. In this resolution the postal employees called for an end to the present practice of airlifting first-class mail on which airmail postage has not been paid.

The authority of the Post Office Department to airlift this mail is most cloudy inasmuch as the Department was authorized by Congress nearly 8 years ago to conduct an experimental program of this type and has since expanded it into a regular part of postal practices.

The House Appropriations Committee recently called on the Post Office Department to cease any expansion of this practice until congressional intent has been established. My bill, H.R. 9488, would terminate the authority of the Post Office Department to airlift first-class mail other than airmail. A num-

ber of other Members have also introduced similar legislation.

I have written to the chairman of the House Post Office and Civil Service Committee, Representative MURRAY, of Tennessee, requesting early hearings on these bills, so that Congress can inform the Department of its intent in these matters. The resolution referred to above follows:

Whereas the airlines are now subsidized to a considerable extent at the expense of the taxpayers, although seemingly under the CAA, but still chargeable to the Post Office Department; and

Whereas the airlift mail is subject to the whims of space available and weather conditions, thus open to delays; and

Whereas the railroads must be ready at all times, to take over the transportation of airmails and airlift mails delayed by weather or unavailability of space; and

Whereas airmail facilities are available to those who wish faster service at a price, which gives them preferential treatment as paid for; and

Whereas airmail facilities are as a general rule not located near railroad stations, which is not conducive to speedy transfer in case space is not available or weather does not permit flying, thus contributing to the loss of transient time of 1 to 3 days; and

Whereas the general feeling by persons who use the mail, is that they prefer a regular dependable service in the regular manner, not subject to other delays; and

Whereas the bulk of airlift mail will in all likelihood be flown to outer distribution centers for return by train or truck, a likelihood for further delay and expense: Now, therefore, be it

Resolved, with due consideration and justice to the taxpaying public, and confusion and loss of morale amongest postal employees, That airlift of first-class mail should not be permitted to be further expanded.

Sound Perspective on the So-Called Defense Debate

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 29, 1960

Mr. KEATING. Mr. President, the manner in which the status of our national defenses is being used by some people for partisan purposes was clearly outlined recently by Paul Martin, the astute and able chief of the Gannett News Service Washington bureau. In an article appearing in the Rochester Times-Union and other newspapers, Mr. Martin points out the similarities between the present wrangle over our defenses and that which occurred in 1957.

He also emphasizes the dangers involved in such shenanigans if our potential enemies take literally the pronouncements of self-seeking politicians on this subject. There is good food for thought in this piece, Mr. President, and I hope it will be carefully read by every Member of Congress. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEBATE OVER DEFENSE IS POLITICAL MATTER
(By Paul Martin)

WASHINGTON.—Congress is going over the same old ground in the so-called missile gap that it has plowed every year since the Soviets launched their first sputnik in 1957.

The answers are still the same, but the alarm seems noisier this year, since several of the Democratic aspirants for President are using defense hearings as a forum for their political ambitions.

The Washington Star summed it up this way in a headline over its Sunday editorial section: "Debate Over Defense Gap Primarily a Political Matter." So it is.

The purpose is to weaken public confidence in the conduct of national defense by President Eisenhower, and thereby promote the chances of the political opposition for winning control of the Federal Government in November.

These tactics are not unfamiliar in a campaign year. In 1956, the same prophets were predicting a calamity for the United States in a "bomber gap" with Russia, on the basis of "intelligence estimates."

Estimates at that time indicated the Soviets had more than 100 jet intercontinental bombers of a new type called the Bison, compared to only 78 B–52's in the U.S. Air Force. A defense contractor staged a campaign to get the Government to buy more heavy jet bombers.

The Air Force admitted to Congress in 1957 that its calculations on the buildup of Soviet bomber strength were all wrong. The Russians never made more than 50 Bisons, then stopped manufacture of all heavy bombers in favor of ballistic missiles. Nor do the Soviets have a "crash" program going today to make long-range missiles.

Political strategy behind the current defense hearings could backfire if the American people get the idea that this domestic political controversy is giving the enemy a false impression of our military strength, to the point where the Communists might be tempted to do something rash.

Russian and Chinese Communists are rather literal-minded folk. They follow our newspapers and tend to believe what our politicians say. For instance, they believed it in 1950 when then Secretary of State Dean Acheson said that Korea was "outside the defense perimeter of the United States."

Our European allies are not alarmed about Soviet intercontinental missiles and space vehicles as much as they are concerned over the mobility and firepower of our ground forces in Western Europe.

They believe this is the kind of limited-war operation that the Russians might resort to in a showdown over Berlin, rather than a nuclear war which no one could expect to win, and where everyone would lose.

The way hearings have been staged by the Senate Space and Preparedness Committees does not inspire confidence that the real purpose was to inquire into the true status of our national defense.

Instead of starting with Defense officials, the committees called "hostile" witnesses first. They heard other witnesses in closed sessions. Senators came out and gave the press their impressions of what was said, instead of letting reporters judge for themselves.

Finally, the new Defense Secretary, Thomas S. Gates, was put on the stand as a climax. He was followed by the service Chiefs, and the Chairman of the Joint Chiefs of Staff. They took apart most of the earlier testimony.

A Democratic Senator told this correspondent: "It may sound like heresy to my party, but all we've succeeded in doing is to confuse the public.

"I'm really not alarmed about the situation. In the matter of big missiles, it's like they have a .45 and we have a .32. But we are not unarmed. Considering everything, airplanes, missiles, and the new Polaris submarines which are going to be the best weapons system of all, we have what it takes."

Now that the current episode is drawing to a close in the continuing missile thriller, the significant thing to bear in mind is this:

Defense Secretary Gates and every service chief has declared that there is no deterrent gap in U.S. military strength today, and there will be none in the foreseeable future.

Every one of the service chiefs is supporting the President's military budget for 1961. Each would like, if possible, to have more funds for his own service. But they are unanimous in asserting that the proposed budget is adequate to defend the United States.

President Eisenhower said in his state of the Union message:

"America possesses an enormous defense power. It is my studied conviction that no nation will ever risk general war against us, unless we should be so foolish as to neglect the defense forces we now so powerfully support.

"It is worldwide knowledge that any power which might be tempted today to attack the United States, even though our country might sustain great losses, would itself promptly suffer a terrible destruction. But I once again assure all peoples and all nations that the United States, except in defense, will never turn loose this destructive power."

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. SCHWENGEL. Mr. Speaker, one of the four finalists in the Voice of Democracy contest, sponsored in cooperation with the National Association of Broadcasters and the Veterans of Foreign Wars, was Mike Phillips, of Burlington, Iowa, a young man whom I have the distinction of representing in the U.S. Congress.

At the awards banquet, February 24, I was pleased when Mike was named as one of the runners-up in the final judging.

His essay on the "I Speak for Democracy" theme speaks out in behalf of one of the bulwarks of the American way of life—the role of the family in keeping alive our basic freedoms and the appreciation of and respect for the heritage which has made this Nation the leader of the free world.

Under leave to extend my remarks, I am pleased to call this message to the attention of my colleagues. The essay follows:

I SPEAK FOR DEMOCRACY
(By Mike Phillips, Notre Dame High School, Burlington, Iowa)

I am a student in a high school in the midwestern part of America. I, like any

other student of this day, am engrossed in the things around me. The recent school exam, and the possibility of victory in the next ball game, are examples of the topics which enter into my conversation with my friends everyday. Jim's new sports car and the complete answer to the latest chemistry experiment, along with a million and one other things, dominate the verbal exchange between every class.

After school I have a job working in a retail store. There I handle money, with all the responsibility that that entails, while trying to satisfy customers with the quality of the products which I sell.

My home is nothing extraordinary, except maybe in the fact that it is a real home—one which is so hard to find in the world today.

My family is, I think, ideal. My parents are good, loving, and God fearing. My brother and sister, both younger than I, are mischievous and playful, but when you really need them they are always willing to help.

But why, you may ask, am I giving this seemingly irrelevant information in a talk on democracy? The answer is simple. This is my democracy. The fact that I can go to any school and take the courses I want, with nothing to fear, except maybe the ever-watchful parental eye.

The fact that I can express my ideas to my instructor and my classmates without being labeled a "radical" or a "revolutionary" or an "enemy of the state".

The fact that I can work and take on responsibility, on my own initiative, without being considered as just one more of the "masses." These are the reasons why I speak for democracy.

Not long ago, I visited the U.S. Capital for the first time, fulfilling a promise I had made to myself many years before. Words have not yet been invented that could accurately describe the first moment I saw the dome of the Capitol Building. I remember it as if it were just yesterday.

It was late in the evening and the city of Washington was just falling asleep. I was on a streetcar, with some friends of mine, all of us alive with the excitement of the big city. Gazing out into the darkness, someone pointed to a great light hovering over the treetops. In a very short time, the car stopped and we got off, our eyes still fixed to this strange illumination. Then, coming into a clearing, I saw it, the Capitol of the United States—tall and stately, with its immaculate dome looking over Washington, and over all America.

An experience such as this is not easily forgotten. I have not forgotten it. It made me realize, as I had never realized before, just what democracy really is. As I stood there, almost dumbfounded, in the simple beauty of what I saw, the grasp of patriotism pulled me forward. In the spotlessness, of this, her temple, I saw America's martyrs—their red blood adding to its glow. Supporting her great white dome, now above me, I saw her gigantic pillars * * * the principative of her existence. As I went forward, my eye caught sight of the three largest and most noticable of these pillars—freedom, truth, and justice.

Standing by her pillar of freedom, I could hear her proclaim to the world the God-given right of liberty.

Seeing her pillar of truth, I knew the strength of her land, the source of all truth—God.

Moving on to her pillar of justice, I heard her say, "All men are created equal."

There I realized that without those three great pillars, that temple would surely fall, as have so many temples before, because they lacked them.

This, then, is the framework of the democracy in which I live. Because my Government recognizes that I am an individual, created by a higher power and given certain basic rights which no power can take from me, I am able to live, speak, and worship in the manner ordained by my conscience.

This is to me the best form of government yet devised by man because it recognizes the fatherhood of God.

This is why I speak for democracy.

Wisconsin Farmers Union 1960 Action Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 29, 1960

Mr. WILEY. Mr. President, we recognize that, during recent years, the American farmer has continued to face problems such as—

Lowering prices for farm products, but rising prices for machinery, equipment, taxes, labor and other farm costs;

An imbalance in production of a number of commodities acting as an economic millstone around the necks of the farmers, resulting in stockpiles of surpluses and high costs to the taxpayers.

Overall, the farmers receive a disproportionately small—and declining—share of the growing national income.

Through the years, a number of farm organizations—at the local, state and national levels—have attempted to analyze the problems and crystallize farm thinking to find solutions to brighten the economic outlook in agriculture.

Among these organizations, unfortunately, there have been differing viewpoints and approaches to resolution of the problem. Nevertheless, each has represented a wide segment of the farm economy.

In the light of these dedicated efforts, it has long been evident that it is most worthwhile for us in Congress—who are seeking a sound solution to our economic problems in agriculture—to listen to these "voices" of the American farmer.

Today, I refer particularly to the Wisconsin Farmers Union.

Over the years, I have often been privileged to work together with the Farmers Union in support of legislation felt to be in the best interests of agriculture.

At the same time, I must frankly say that there have been issues on which we have not seen eye to eye. Nevertheless, I continue to respect the viewpoint of this fine union—as, frankly speaking, they have respected mine—as we try to reach objectives which we both seek: that is, a real solution to the complex problems in agriculture.

Recently, the Farmers Union News published the 1960 action program for the union.

Reflecting the dedicated endeavors of this organization to seek solutions to problems affecting, not only the Wisconsin farmer, but also other challenges confronting us nationally and internationally, I believe this action program merits the attention of Congress. I ask unanimous consent to have the program printed in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

[From the Wisconsin Farmers Union News, Feb. 29, 1960]

WISCONSIN FARMERS UNION 1960 ACTION PROGRAM

PREAMBLE

The growth and greatness of America is rooted deep in its soil. For over 200 years a basic cornerstone of American freedom has been the opportunity to make a living from the land.

For the victims of Old World oppression, America's land offered both the symbol and the substance of freedom, independence, opportunity, and self-respect. As the tide of national expansion rolled westward, it offered escape from the exploitation of the cities, a new start for the victims of disaster, and opportunity for young people starting out in life.

The land has given America a rich return—an abundance of food and raw material, strong and self-reliant people. It has provided homes for millions of American families to live, work, and grow together. It has fostered rural community life in the highest tradition of American democracy.

But in recent years all this is gravely threatened by growing maladjustment and injustice within the national economy. The greedy hand of monopoly has steadily pushed up the prices of those things which farmers must buy. At the same time the farmers, scattered across the Nation in millions of operating units, imperfectly and insufficiently organized, have fallen prey to their own technological advances. Production has outstripped their available markets, and the prices they receive for their commodities have been falling while their costs have been rising.

Farming now requires greater investments, greater costs of operation than ever before. Yet its return is falling to depression levels. It no longer offers opportunity that measures up to other walks of life. The young people are turning away from it to go into the cities. The future of the land looks dark.

America needs its land. It needs good farmers to care for it and conserve it. It needs its farm families and the strength and meaning they give to American life and ideals. It needs agriculture as a way of life.

The inequality of bargaining power between agriculture and industry is steadily draining away the economic strength of rural America both on the farm and along the main streets of the communities which serve our vast agricultural areas. It is drying up a vital market for American industry and business and thus threatening the future employment of American wage earners.

This is a far-reaching problem of grave national concern. Abraham Lincoln said a century ago that a nation cannot survive half slave and half free. Today it can be added that an economy cannot prosper half fat and half starved, half boom and half broke.

Government without political justice is tyranny. Production without economic justice is exploitation.

American agriculture is entitled to economic justice. The task of restoring a sound and healthy balance between industry and agriculture is a national responsibility, for the present and future welfare of the Nation depends upon its success.

For over a quarter of a century the Farmers Union in Wisconsin has been an organization of family-type farmers leading the fight for the preservation of our cherished agricultural ideas. In this fight we are not

only fighting for the preservation of the family farm, but for the foundations of our rural life, our rural churches, our rural communities. We are fighting, too, for preserving the great rural market so important to the continued prosperity of the industrial segment of our economy. The fight for the family-type farmer is a fight for a better, a greater, a more secure America of the future.

As we enter upon this new decade of the sixties we sound a note of warning to those who dwell upon the rosy promises of continued economic growth and seeming prosperity. Prosperity built upon an impoverished agriculture will not stand. To make the dream of the sixties come true, our first task must be to provide parity of income for agriculture.

We seek no special privilege, no special advantage. We seek only equality of treatment, equality of opportunity for American farm families. We seek economic justice for agriculture.

FOR THESE THINGS WE STAND

We believe that family-type farming is fundamental and basic. It is the cradle of American freedom and democracy.

We believe our economic system can and must be so adjusted to give farm families full opportunity to earn and receive a parity income equal on the average to the incomes of Americans in other walks of life.

We shall support adoption and use of workable combinations of farm commodity income improvement methods such as: loans, purchase agreements, market surplus diversion purchases, parity income deficiency payments direct to farmers limited to family-size operations, regulation of imports, export incentive payments, stabilization operations by farmers and by Government, marketing agreements and orders, other farmers' bargaining devices, marketing premium payments for sale of livestock at desirable weights, other types of marketing premium payments designed to keep supplies in balance with demand, marketing standards and scheduling, cooperative storage and marketing practices, and a system of marketing quotas for all commodities as a whole, for groups of related commodities, or for individual commodities, as needed.

We urge the organization of a centralized and federated nationwide producer cooperative marketing organization for dairy products, and we favor State enabling legislation to develop cooperative marketing organizations which can fit into such federated nationwide cooperative marketing of agricultural commodities.

We favor the expansion of co-op processing, marketing, and storage facilities, including terminal markets, through REA-type loans and technical assistance to farmer-owned and controlled cooperatives.

We favor the elimination of interstate barriers to the free flow of quality dairy products between markets. For this purpose we favor Federal legislation for establishing uniform sanitation standards and practices in the production, processing, transportation and sale of fluid milk and milk products shipped in interstate commerce.

We urge consolidation of the conservation reserve with the ACP program and that the total program be expanded. Greater emphasis and attention should be given to the soil and water conservation aspects of the program. The law should be amended to prohibit the placing of entire farms in the reserve. Closer supervision and enforcement should be exercised by the Department and the farmer committees to see to it that land conservation and care requirements are strictly carried out in the conservation reserve and ACP programs.

All possible measures to expand consumption of farm commodities should be undertaken, consistent with good soil conservation, before resorting to production restrictions. We demand that the national food stamp plan as recently enacted be used to supplement the diets of underprivileged persons, and we favor a more aggressive export program to undernourished peoples of the world. We commend the University of Wisconsin and its extension service for its leadership in basic and applied farm research, and urge the State legislature to provide sufficient funds for an expanded program. We recognize that the University of Wisconsin College of Agriculture and its extension service have pioneered in spreading the results of farm research throughout the State, and the university has achieved great success in increasing efficient production on Wisconsin farms. These technological advances on the production side have now outstripped improvements in the distribution of farm commodities. The emphasis in such an expanded research program should be placed upon studies concerned with marketing and new uses of farm commodities.

To demonstrate the practicability of a national dairy food stamp plan and to secure the immediate benefits of such a plan in Wisconsin, we favor the enactment of a State food stamp plan in Wisconsin by which surplus food commodities would be made available to low-income families and the recipients of State and county welfare aids through the normal channels of trade. Such a plan should be supported by a Federal contribution equal to the value of the surplus commodities consumed through the plan's operation. A dairy food stamp plan would prevent the waste of surplus food commodities, insure a more adequate diet of needy persons, save on public storage and handling costs, and channel this trade through the local retail food merchant.

We favor an expanded school lunch and school milk program, and that it be continued on a Federal basis. We favor the use of more dairy products by our Armed Forces.

We favor legislation to establish and maintain stockpiles of storable farm commodities as a safety reserve in the overall program of national defense.

We are opposed to the sale of Government-owned agricultural commodities on the market for less than parity price plus five percent and carrying charges. We believe in rotating the commodities in storage, especially perishable commodities, with new crops to avoid deterioration, but the commodities so marketed should be replaced with an amount equal to that taken out so as not to add to the amount normally marketed.

We demand representation of family-type farmers on all governmental boards and agencies involving agricultural programs.

We advocate a return to the democratic practices formerly used in the establishment and in the authority of farmer committees in the administration of the ASC program.

We oppose the so-called "hard money" manipulations by the Federal Reserve Board, Government and financial monopolies which increase the interest burdens of all people, including Federal debt.

We favor the establishment of a comprehensive farm credit yardstick program at interest rates not higher than the average cost of funds to the Federal Government.

We continue to support the development and use of farmer-owned production credit and farm loan associations and the banks for cooperatives.

We are alarmed over the deterioration of the original principles of the Farmers Home Administration and urge a return to the original and practical purpose of providing needed rural credit.

We endorse the soil conservation district program, recommend an acceleration in watershed protection and flood prevention projects, and commend the U.S. Soil Conservation Service for its contributions in furthering these activities.

We continue to favor the adequate program now operating in Wisconsin for the eradication of brucellosis (Bang's disease); and we support the tuberculosis program work being done by the Wisconsin State Department of Agriculture and the College of Agriculture in finding an improved approach for the eradication of actually infected animals.

We favor further development of the REA-financed electrical and telephone programs. We are opposed to legislation which would increase interest rates on REA loans. We protest any discrimination against co-op applicants in making loans for the telephone program.

We urge Farmers Union members to give all their patronage to Farmers Union cooperatives and their Farmers Union insurance program and to build more cooperatives in Farmers Union territory to provide services where they are needed, to fight the rising tide of operating costs. Building the strength of cooperatives also requires the full support of cooperative patrons through membership in the Farmers Union, which carries on the educational and legislative program in their behalf.

We have always taken the position that taxes should be levied according to ability to pay. We oppose any proposal for either State or Federal sales taxes.

We are opposed to proposed discriminatory double taxation of cooperative refunds.

We oppose the program to change the method of computing taxes of qualified farm cooperatives.

We favor the taxing of excess profits in corporate income.

We favor the elimination of depletion allowances and accelerated tax amortization, where they are excessive, and other tax loopholes.

We favor an increase in State aid to provide additional funds for adequate schools serving the rural areas, such additional funds to come from taxation in accordance with the ability to pay.

We favor increased Federal aid for education. We oppose the proposal to withdraw Federal aid from vocational agriculture and domestic science.

We favor and recommend that bona fide, working farmers be represented on the governing bodies of the State university and colleges and on the board of vocational and adult education.

We are opposed to any plan which would destroy the segregation of highway tax income. We favor a more liberal policy in classifications of primary and secondary roads in the townships.

We favor a State and Federal program of investigation and regulation of monopolies and vigorous prosecution of all illegal practices.

We recognize and support labor's right to organize and bargain collectively for adequate wages and improved working conditions. We are opposed to the efforts to sabotage these fundamental rights of labor under the guise of so-called right-to-work legislation. Full employment in the cities at good wages is vital to the farmer's market.

We favor a program for better health facilities, and a national health insurance act to provide better medical care, health services, and hospitalization programs for all Americans.

We favor an immediate program to expand facilities for training more doctors and other medical personnel.

We favor adequate appropriations to restore services of the State radio network and we support experimental planning for a statewide television program.

We favor realistic programs of aid for veterans.

We favor a reappraisal of our national defense needs in the light of recent development of new weapons and techniques of warfare, with particular reference to the need for trained manpower. The drafting of young men for military service should not be continued unless it is clearly necessary to the effective defense of our country. We do not favor a permanent system of universal military training.

We believe that in time of national emergency, industry and wealth should be drafted as well as manpower.

We favor further development of a practical civil defense program, with agricultural people being informed and participating in such program.

We favor legislation to protect the water rights of farmers.

We endorse the principle of selective cutting and reforestation. We urge that public works in reforestation and cooperative logging and processing plants be established.

We believe that the use of State marketing orders and agreements should be encouraged and extended to all crops practical, and that wood products be included. We favor close cooperation with the Wisconsin State Department of Agriculture in implementing these orders and agreements.

We favor strengthening the United Nations and enlarging its functions for the purpose of peace. We support the Food and Agricultural Organization, the International Labor Office, U.N. Educational, Scientific, and Cultural Organization, and the World Health Organization, and the establishment of a World Food Bank. We enthusiastically support the international exchange of farm trainees and urge the continuation and expansion of this program for better understanding among nations.

We favor the basic objectives of the point 4 program.

We favor a National Science Foundation to control all patents developed by public agencies to the general welfare of all people.

We are opposed to the control of atomic energy research falling into private hands or into the hands of the military.

The Wisconsin Farmers Union is opposed to all forms of totalitarian dictatorship, regardless of whether these dictatorships be political, economic, religious, or intellectual in character. We believe in political, economic, religious, and intellectual freedom with justice for all, and we shall oppose the efforts of any group to change this fundamental philosophy with the aim of subverting our program and organization to their ends.

Misuse of Manpower

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. IRWIN. Mr. Speaker, there has been considerable discussion of late on the subject of the misuse of military manpower. In connection with the recently ended winter Olympics, there has been a utilization of marines and soldiers that, in the opinion of myself and others, was more than mere misuse. It was flagrant abuse. In running its own operations, we are told the military assigned personnel to menial tasks of no value for training purposes and of doubtful benefit to others than individual officers and their families. This appears to be misuse in many cases.

At the Olympics something else crops up—private profit. It may be well and good to point out that for the success of the Olympics, it was necessary to have someone eliminate the danger of avalanches, trample snow, and shovel drainage ditches. But how did the promoters, who were interested in the commercial aspects of the games, get the military to do what should have been a responsibility of the promoters themselves?

Under leave to extend my remarks in the RECORD, I include an article by Stanley Woodward, which was published in the New York Herald Tribune on February 14, 1960, and a letter to me from William Morris of the Bell Syndicate, Inc., both of which elaborate on this issue:

RIVERSIDE, CONN., *February 14, 1960.*

DEAR CONGRESSMAN IRWIN: The enclosed article by Stanley Woodward from today's Herald Tribune fittingly expresses the shock I felt when I first heard that platoons of American marines are being marched up and down hills at Squaw Valley to prepare the snow for the forthcoming Olympic races. You'll find picture documentation of this fantastic boondoggle in the current Life magazine.

Your colleague, Congressman KOWALSKI, has done a good job of bringing to the public attention the misuse of uniformed manpower to walk dogs and wash dishes for the wives of Army brass. Here's an issue that cries out for congressional investigation—one that makes the "payola" inquiry trifling by comparison.

I have been a sports fan all my life—and Stanley Woodward has been just about the most respected sports editor as long as I can remember—but this is more than the likes of us can stomach. As he says: "But how the hell the Olympic promoters can utilize the military forces in preparation of a purely nonmilitary ski area is strictly unclear to us."

Sincerely,

WM. MORRIS.

[From the New York Herald Tribune, Feb. 14, 1960]

(By Stanley Woodward)

SNOW FUN FOR GI's

A formidable amount of snow builds up on Papoose Mountain. A whistle sounds in the military area and an Air Force gun crew rushes out to man the 5-incher. Boom—a controlled snowslide starts down the mountain. Another shot and the danger of an avalanche which might hurt the winter Olympics is over. All that remains is for a couple of companies of marines to climb up and tread down the snow so that the downhill will be in shape for the skiers.

Torrential rains unfortunately fall. A company of infantry rushes out and starts shoveling ditches so that the Olympic facilities won't be damaged. It was a close call but the Army and a change to colder weather saved the day. By night it is snowing again and all that will be necessary to preserve the skiing in the morning will be a couple of artillery volleys at Squaw Peak and a few hours of treading by the soldiers and marines.

It is understood that the State of California and the Federal Government became involved for $13,490,000 to fix up Squaw Valley for the Olympic games and that we'll all pay our share toward the great show. But how the hell the Olympic promoters can utilize the military forces in preparation of a purely nonmilitary ski area is strictly unclear to us.

NEVADA LURKS IN AMBUSH

An awful lot of nasty stuff is going to come out when the big city newspaper men get to Squaw Valley next week. The repercussions may be violent enough to unseat the California State government and might well have an effect on the Presidential race.

This is the weirdest deal since Teapot Dome. The State of California has gone for $8,990,000, the Federal Government for $4,500,000 and private industry for $2,500,000. The State of Nevada, conservatively slicing the prospective Olympic return to its gambling industry, has pushed in $400,000.

The Nevadans are ready to make the greatest killing since legalized gambling began. Squaw Valley is virtually on the shores of Lake Tahoe which is half in California, half in Nevada.

At the northern end is Calneva, at the southern is Stateline, both Nevada towns which are solid with slot machines and crap tables. For those who get by the preliminary defenses, there is Reno, 42 miles east.

A good many of the eastern newspaper men who will cover the Olympics, including our own Red Smith, will stay at Reno and commute to the rinks and snowy peaks daily by station wagon. Facilities on the scene, apparently operated by the California branch of the Mafia, are paid for in advance and through the nose.

CAL SOLONS WERE HOOKED

The State hopes to get back some of its money but despite the presence of the world's greatest skiers and skaters and the promise of a show to end shows by Walt Disney, advance sales have been slow. In the words of a Sheepshead Bay fisherman, "It don't look as though California is going to get her bait back."

The whole business started when an ex-New Yorker named Alex Cushing who owns a ski lodge in Squaw Valley and operates a lift, persuaded the United States Olympic committee to let him try to get the games for his God-forsaken hole in the mountains.

He went to Paris and bragged of the place to the international Olympians and indicated the whole bill for rigging the terrain would be $1 million. The Olympians gave Squaw Valley the games and the State of California obligingly put up the million, which proved to be a fractional downpayment.

Once in it the California Legislature was trapped and more and more money had to be raised to avoid a blooper which would forever besmirch the fair name of the Golden State.

So now California is in it up to the ears. Nevada is standing by to make a killing and Mr. Cushing, originator of the whole deal, is sitting in his ski lodge waiting for everyone to go away so he can clean up.

It's easy to see how it all happened. But how did the State of California get the services of the troops.

Science in the Advancement of New States

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 29, 1960

Mr. SCOTT. Mr. President, the role of science in the development of new African and Asian states was reviewed recently in two addresses by Hon. Abba

Eban, formerly Israel Ambassador to the United States of America and its Permanent Delegate at the United Nations. Mr. Eban is today Minister Without Portfolio in the Government of Israel, and president of the Weizmann Institute of Science.

The text of these addresses was published in the Jerusalem Post newspaper of Israel. In view of the compelling interest of Mr. Eban's observations on two great movements of our time, I ask unanimous consent to have a digest of these addresses be printed in the Appendix of the RECORD.

There being no objection, the digest of the addresses was ordered to be printed in the RECORD, as follows:

SCIENCE IN THE ADVANCEMENT OF NEW STATES

(By Hon. Abba Eban)

Two great movements of history shape the life and destiny of our times—the scientific revolution, with its glittering discoveries and achievements, and the emancipation of new nations, emerging one after the other into the light and air of freedom.

Yet some of the most recent victories of science have done more to increase man's haunting sense of insecurity than to advance his welfare. The longing for peace—the deepest instinct of the human heart—is now suffused with an anguish of unparalleled depth and universality. But science in our time has not only cast a shadow and spread a cloud; it also sheds a great light—nothing less than the prospect of man's redemption from his basic scarcities and disabilities.

Nuclear and solar energy can create new sources of energy, at a time when conventional sources are under strain of increasing use, with an eventual prospect of exhaustion.

Medical science has scored splendid victories in many crucial fields. Methods have been discovered of combating endemic diseases which have afflicted whole nations for centuries.

The advance of air transport and electronic techniques enables many nations to overcome the handicaps of distance and isolation which have hitherto cut them off from contact with each other and with the achievements of science and technology.

The new accessibility of peoples to each other's lives and thoughts enlarges the prospect of international understanding. Clearly, then, science can be the agent of a rich and varied salvation for all mankind. It holds a special promise for those nations which have recently achieved their sovereignty and now find themselves confronted by agonizing difficulties on the road toward social and economic progress.

Yet, despite its theoretical power of liberation, science remains a prospective rather than an actual benefactor of mankind. There is still more vision than reality, more promise than fulfilment. Scientists and statesmen inhabit separate worlds of functional specialization; they have no sharp sense of being concerned with each other.

Justly exalted by the pursuit of knowledge for its own sake, scientists are not encouraged to feel special responsibility for the fate of human society, even though it is they who will largely determine man's social fate for good or ill. The leadership of the scientific world rests in the hands of nations which, however, good their intentions, cannot always feel the full and poignant urgency of harvesting the new benefits of science without delay. Moreover, the leaders of nations, especially the young emergent nations, are by experience and background little equipped to appreciate the capacity of science to find a road toward the solution of their most acute national and human problems.

As we look upon the separate worlds of statecraft and science, we are driven by the logic of our times to the clear necessity of building a bridge between them. The need is to reveal and define the possibilities of science as an instrument for the guidance and fertilization of national liberation movements. This view of the interaction between the two major currents of modern history has led the Weizmann Institute of Science and Yad Chaim Weizmann at Rehovoth, Israel, to the decision to convene an international conference in August this year. The participants will be scientists, economists, political thinkers, social scientists and representatives of new nations—particularly those concerned with economic and social planning. The object of the conference will be to explore the capacity of science to advance the life of nations which have not yet reached the full momentum of their development.

The initiative in organizing the conference is not alien to the traditions of the Weizmann Institute. The buildings, laboratories, libraries, and ressearch projects assembled in Rehovoth are but the outer expression of a system of thought and life which our first president, the late Dr. Chaim Weizmann, upheld and exemplified as he pursued his simultaneous course in statecraft and science.

Many regard it as natural that Israel should have a special role in illustrating the relationship between science and the modern movement of national liberation. The pioneering momentum which marks Israel's development in agriculture and science may be instructive for other new states. If a state like Israel can overcome natural scarcity and the limitations of a niggardly geography, surely the courage and self-confidence of other nations in like conditions would be uplifted.

Among scientists of world repute who will deliver papers at the conference in Rehovoth are Prof. I. I. Rabi, physicist and Nobel Prize laureate, of Columbia University; Dr. Farrington Daniels, of the University of Wisconsin; Dr. Walter C. Lowdermilk, of Stanford; Dr. David Jenkins, noted authority on desalination of sea water, of the U.S. Department of Interior; Dr. Klare Markley, of California; Dr. M. C. Shelesnyak, formerly of Johns Hopkins University, Baltimore, and now in Israel; Dr. Marshall Brucer, of Oak Ridge National Laboratory; Dr. Jerome B. Wiesner and Dr. Jerrold Zacharias, of MIT; and Mr. Paul Hoffman, architect of the first U.S. oversea aid program.

The conference is planned as a meeting between science and the national liberation movement of our generation, and participants will include also representatives and delegations of developing countries, particularly from Africa and Asia. I firmly believe that the State of Israel, and especially the Weizmann Institute, are destined to serve as one of the gates through which liberated nations will enter the world of science.

The End of Inflation?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. MILLER of New York. Mr. Speaker, I would like to call the attention of the House to a most heartening report which appeared yesterday, Sunday, February 28, on the front page of the New York Times. The burden of this report is that at least for the present, inflation has been brought under control. This opinion is backed by responsible Government officials and fully supported by facts.

Moreover, the Times credits the policies of the Federal Reserve System which we have so often heard attacked in this Chamber, and the $4.2 billion surplus, as entitled to a share of the honors for achieving price stability.

I look upon these facts as the most encouraging news that we could be given at this time, short of a guarantee of world peace. They are, further, a complete vindication for the fiscal and monetary policies which the gentlemen across the aisle have attacked so bitterly, and for which the President and the minority Members in Congress have fought so hard.

Under unanimous consent I include the article referred to in the Appendix of the RECORD.

UNITED STATES NOTES GAINS IN INFLATION WAR—TOP ECONOMIC AIDS DOUBT SERIOUS PRICE RISES—SEE LONG PERIOD OF PROSPERITY

(By Edwin L. Dale, Jr.)

WASHINGTON, February 27.—The Government's high-ranking economic and financial officials believe that major progress has been made on the anti-inflation front.

While some of them expect a slight further rise in prices this year, none foresees another serious wave of inflation such as has characterized most of the period since World War II.

"If we keep Government finances in shape," said one official this week, "the 1956–57 inflation might very well prove to have been the last."

The view in the Government is beginning to coincide with that of Per Jacobsson, head of the International Monetary Fund. Mr. Jacobsson went out on a limb last fall with the statement that "in all probability the postwar inflation has come to an end."

There is a growing belief within the Government that if inflation is actually under control at last, there is a good chance that the present period of prosperity will run longer than usual before being interrupted by a recession.

"I hardly even want to whisper it," said one official, "but I honestly believe it is possible that this period of expansion could run all the way through 1961. One main reason is the outlook for reasonable price stability.

The present administration, and the Federal Reserve System have long felt that inflation breeds recession.

Officials in the Government do not believe that the whole inflation problem has been solved. Some believe wages are still rising too fast to allow complete price stability, though the rate of rise slowed down noticeably last year.

Others are worried about the condition of the national debt—a condition not now serious but potentially inflationary if the Treasury is indefinitely barred from selling any bonds of more than 5 years to maturity. The ceiling on the interest rate it can pay bars such sales now.

Still others, while believing that the Federal budget is now in better shape than for some time past, fear that it could get out of hand again, in the sense of a big rise in spending and more deficits.

But the general attitude is one of great satisfaction that conditions of lasting price stability are being approached, if they have not been achieved.

PRICE RISE SLOWS

Consumer prices went through their last period of steep increase from early 1956 to early 1958. The increase in that period was 7.5 percent, or 3.75 percent a year. Since early 1958, they have been essentially stable. The increase in the 21 months since April, 1958, has been only 1.5 percent, or a rate of increase of less than 1 percent a year.

Officials have been encouraged by a number of bits of evidence that point to continuation of price stability in the future.

One important item is the performance of wholesale prices for the last year.

The overall index has been almost completely stable. More important, the index of all products other than farm products and processed foods has showed an exceptionally small increase for a period of rising business—less than 1 percent. The farm and food portion has declined.

Furthermore, the various indexes of sensitive raw materials have also showed no signs of impending inflation. They, too, have been stable. They invariably rose in the past in advance of later increases in the broader wholesale and consumer price indexes.

On the wage front, the Government has evidence that last year saw a substantial rise, but markedly less than other years in the postwar period. Wage increases for the economy as a whole are difficult to measure accurately, but the available evidence is that there was a slowing down last year. The steel settlement was less than half as liberal as the average of the previous postwar settlements.

On the financial side, both the budgetary and monetary situations are believed to be in healthier shape than has been typical of the postwar period. The Nation's money supply is firmly in control—a reflection of the Federal Reserve's tight money policy. The budget has a projected surplus of $4,200 million, the largest in more than a decade.

Officials stress that if price stability is essentially achieved, the job of maintaining that stability will be all the easier. There will be fewer extra wage increases based on rising living costs for the workers. There will be fewer upward pressures on various parts of the budget. There will be more savings, at least in theory. There will be fewer spurts of demand by industrial buyers trying to beat price increases.

Low Wages and Relief

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, February 29, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which recently appeared in the New York Times pointing out the direct relationship between adequate minimum wages and the tax burden of metropolitan centers such as New York City. This editorial also shows how the minimum wage proposed in the bill which I have sponsored and which is now before the Senate Committee on Labor and Public Welfare is an absolute minimum bill. The $1.25 an hour which this bill calls for is hardly adequate to support a decent standard of living in most communities throughout the Nation. As this editorial points out, raising the minimum wage would be a singular service to many of the Nation's taxpayers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times Times, Feb. 21, 1960]

LOW WAGES AND RELIEF

Welfare Commissioner Dumpson has made a valuable contribution to an understanding of the problem of low wages in New York City and what should be done to deal with it. At least his testimony before the Brown committee of the city council has disposed of the comfortable idea, so widely held, that there is no low-wage problem in this high-wage town. Unfortunately, there are no statistics on earnings in the various occupations and industries in New York and the number of workers in each wage bracket. However, the figures on relief which Commissioner Dumpson cited give us a rough measure of the situation.

There are now some 250,000 people who are actually receiving public assistance. But Mr. Dumpson estimates conservatively that for every person getting it there are one and a half times as many more who aren't getting it but whose income is below the public assistance standards—a bare minimum for health and safety. His estimate indicates a substandard total in New York City now of about 600,000.

Commissioner Dumpson also showed clearly where the low-wage pockets exist—at least in terms of the people involved. Over 90 percent of those whose wages have to be supplemented by home relief are either Negroes are workers who have come to New York from Puerto Rico. They usually have large families and, while the breadwinner gets enough to support himself alone, he doesn't get enough to support all the others and public assistance is needed.

Important, too, are the figures Commissioner Dumpson gave as to the effect of a statewide uniform minimum wage. A floor of $1.25 an hour would raise the legal minimum to $50 a week. But this would be $24 lower than the minimum required for the health and safety of a family of four—leaving many families still in need of public assistance. A $1.25 minimum, however, would be real publis assistance to the taxpayers in town. Mr. Dumpson estimates that the savings involved in the decreased need for grants from his department would save it about a million dollars a year.

All in all, the Commissioner has given the Brown committee some useful base lines for testimony and discussion in the hearings to come.

A False Question Attacks the FBI

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Examiner, Monday, February 15, 1960, "A False Question Attacks the FBI":

A FALSE QUESTION ATTACKS THE FBI

The Federal Bureau of Investigation is a responsible guardian of the public safety and of the Nation's internal security. So necessary are its functions that, did the FBI not exist, its immediate creation would be necessary. Fortunately it has existed and served admirably in crucial times; for this it has deservedly won much praise.

It is not and never should be sacrosanct. But those in positions of responsibility who criticize it are obligated to know what they're talking about. This obligation rests particularly upon all who help train the young for life in a democratic society.

The obligation was failed by the University of California professors of English who phrased an essay question for students that read:

"What are the dangers to a democracy of a national police organization like the FBI, which operates secretly and is unresponsive to public criticism?"

The Fowler brothers would not have conceded to the authors of this question the competence to be teachers of English, because of their careless use of "which" for "that." However, we are concerned here with an aspect of it somewhat more serious.

The question equates the FBI either actually or potentially with the Nazi Gestapo and Communist MVD. It associates the FBI with summary arrests at midnight, physical torture, secret trials, secret prisons, secret executions—in short, with all the hateful paraphernalia of a political police.

But let us test the question's several parts for truth.

The FBI is not, except in the loosest sense, a national police organization. It has neither general nor local police powers. Its jurisdiction is limited to a mere handful of offenses defined in Federal statutes.

The FBI does not operate secretly. It functions under the wholesome observation of the Federal courts, U.S. attorneys, national and local bar associations, and a free press.

The FBI is not unresponsive to public criticism. Organizationally it is only a bureau within the Department of Justice. It is responsible to the Attorney General and, through him, the President, two officials sensitive to public opinion. It depends for appropriations on Congress, a body very sensitive to public opinion.

Thus we see that all three of the major premises in the question are untrue.

Afterthoughts have been put forward to justify the question. None alters the fact that its authors committed the major academic sin of drawing a conclusion without first establishing the facts. They have not lived up to the academic responsibility that must go with academic freedom.

Needs of a Farm Program

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, February 29, 1960

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial taken from the Progressive Farmer, of February.

Over the years, Mr. President, the Progressive Farmer has worked hard and objectively to promote sound farm programs. This publication has especially heeded the needs of family-sized farms.

One of its most recent and thought-provoking editorials was carried in the February 1960 issue, entitled, "These Things a Farm Program Must Have." It commands the attention and most

careful consideration of each Member of Congress, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE THINGS A FARM PROGRAM MUST HAVE

President Eisenhower and Secretary Benson have proposed a 5-point farm program. There is nothing particularly new about it. And it includes at least one proposal, also not new, that would destroy parity price supports, leaving farmers nothing but disaster relief. Here is a summary of the Eisenhower-Benson proposal.

1. A bigger conservation reserve aimed especially at high-producing crop areas.

2. More research to find new markets and new uses for farm products.

3. More "food for peace"—using more of our surpluses to help friendly foreign nations.

4. An expanded rural development program to help farmers in low-income areas.

5. Price supports based on market prices rather than a percentage of parity.

Experience with the soil bank proves that it is an expensive way to whittle down surpluses. If the Government wishes to lower cost of the farm program in the interest of a balanced budget, it had better forget about a big soil bank program.

Research seeking new markets and new uses is fine. And a vigorous "food for peace" program is also aimed in the right direction. We have long wondered why the United States didn't use more food and fewer dollars in its foreign-aid programs. Food we have in abundance; of dollars, no one ever has enough.

The heart of the Eisenhower program is the proposal that we ditch parity and use market prices for price support. This we should never do. Price supports based on market averages are really not supports; they are merely a brake on sliding prices. This proposal's only virtue is that it would allow prices to fall only 10 percent a year. It would prevent a catastrophic drop in any one year. But such a plan would not prevent farm prices from going down and down year after year regardless of the farmer's cost of production.

So much for the Eisenhower farm program. Congress is not likely to swap parity supports for average market prices. At least, we fervently hope it won't.

What sort of farm program should we have? No one program will fit all farm commodities. The progressive farmer agrees with the National Grange that a commodity approach is best. Fit the program to the commodity. Cotton, for example, has a special problem. It not only has to compete with foreign cotton and other natural fibers but also synthetic fibers. No one has yet been able to create food in a laboratory, but new fibers are continuously coming out of test tubes. This makes it highly important that a cotton program provide for price flexibility in the market—for the sake of competition.

There are certain fundamentals that programs for any and all commodities must satisfy if the program is to be a success. And to us these are the fundamentals a successful program must have:

1. Price and income protection: First of all, a program must give the grower price protection. If it doesn't do this, there is no real need for a program. It should give an efficient farmer a fair chance to make a net income in keeping with his managerial ability and his investment in land, labor, and equipment. Price supports should be based on some yardstick such as a modernized parity that will hold a balance between farm prices and farm costs.

2. Competitive price: Not only must skilled farmers make a profit, but the commodity they grow must be low enough in price to sell for use. This is the reason why it may be necessary with some commodities to allow the market to fall to its natural level, with the Government paying the difference between the market price and a fair price.

3. Free movement in the market: The program should allow the commodity to move freely in the market with the minimum of Government interference—and without piling up in huge volume and for long periods in storage.

4. Fair to taxpayer: A program must not bear too heavily on the taxpayer. It must be in the national interest by permitting growers to produce abundantly and efficiently at a fair profit. The program must be worth the money by helping farmers enough to justify its cost.

5. Production control: No matter what sort of program we have, it must have a device to control production. With their tremendous ability to produce, farmers can soon ruin themselves by growing too much. Moreover, if the Government is to protect the grower's price and income, it must also protect the taxpayer's pocketbook by keeping production within reasonable bounds. The Government can well afford to insure growers a fair price for the farm commodities needed for domestic use. It cannot afford and should not be expected to spend tax money for unlimited farm production, a large part of which must be exported at a tremendous loss.

Radioisotope Uses by the Coal Industry

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. VAN ZANDT. Mr. Speaker, on Thursday, February 25, Dr. Harold J. Rose, representing the Bituminous Coal Research, Inc., Pittsburgh, Pa., and with 42 years of research and development work on coal and coal products, appeared before the congressional Joint Committee on Atomic Energy and testified on the general aspects of the coal industry and pinpointed the potential scale of radioisotope uses by the coal industry.

Dr. Rose's statement follows:

GENERAL ASPECTS OF THE COAL INDUSTRY

To give perspective on the potential scale of radioisotope uses by the coal industry, a few general aspects will be mentioned.

Coal is one of the world's leading commodities, whether measured by tonnage produced, dollar value, or industrial importance. Coal provides two-thirds of this country's electric power generated from fuels, and 100 percent of the coke used to make iron and steel. Coal is an important source of process heat, of comfort heat and of chemical products. Coal forms the world's largest reserve of concentrated organic raw materials, with proven reserves measured in trillions of tons.

In the United States, coal is produced commercially in 26 States. Production in the year just ended was 410 million tons of bituminous coal and lignite, plus 20 million tons of anthracite. The whole was valued at more than $2 billion at the mines. Recently, Secretary of Interior Seaton forecast that in 15 years time 775 million tons of coal would be needed yearly, or nearly twice the present rate of production. This agrees with forecasts by others, so that bituminous coal is looked upon as an industry which should expand considerably in the reasonably near future.

In this era of continuing inflation, bituminous coal has been remarkably stable in price. Although coal mines have received several wage increases and the supplies used by coal miners have increased considerably in cost during the past decade, the average price of bituminous coal in the United States last year was actually less than it was 12 years ago in 1948. This remarkable record has been made possible by large-scale mechanization and automation.

I mention the foregoing to show that the coal industry will continue to make large investments in new facilities, and that it is receptive to new techniques and equipment as they become available.

Radioisotopes are already in successful use by a few coal producers and coal users for various purposes, but some of these applications have had little or no description to date in the technical literature. Many other uses appear to be feasible if the necessary basic research and engineering research are done to establish the technical possibilities. This will encourage the design and use by industry of commercial equipment utilizing radioisotopes.

AEC SURVEY OF RADIOISOTOPES FOR THE COAL INDUSTRY

In accordance with the policy of the Atomic Energy Commission to encourage the use of radioisotopes in the public interest, the Office of Isotopes Development has contracted with Bituminous Coal Research, Inc., to prepare a survey report on the nature and estimated extent of possible applications of radioisotopes and related technology to the mining, transport and storage of coal by the coal industry, and to storage, in-plant handling, and use of coal by major consumer groups.

This project consists of a survey only, and does not include laboratory research, engineering development nor field tests. Following are some of the uses which appear to be possible, provided the necessary research is done.

Underground mining

Great advances in coal-mining performance are being made through mechanization, including continuous mining machines which cut and load coal directly from the seam. The resulting high production rates cause major problems of automatic operation, continuous transportation away from the face, safety, ventilation, dust control, etc., which radioisotopes can help to solve.

Keeping continuous miners in coalbed

The alloy cutters on continuous miners are quickly damaged if they cut into hard roof or floor strata, furthermore the resulting impurities are not wanted in coal. A radioisotope sensing device might be developed to keep the cutting head in coal close to the roof or floor rock but without cutting into it. The gage might operate by sensing density changes by gamma-radiation "scatter," since the associated shales, sandstone, etc., have nearly twice the density of coal. Or the device might be of the reflection type to sense the change in chemical or physical properties where the coalbed meets roof or floor strata.

Machine maintenance

Modern coal mining is based on expensive machines operating at very heavy loads under severe conditions. Machine maintenance is therefore a major problem; in fact, a study of the costs of mechanized mining will usually show that the best way to get a substantial reduction of present costs would be to get a higher percentage of operating time out of the equipment used.

Radioisotopes have many potential applications in preventive and repair maintenance, the selection of best lubricants, etc.

Load-bearing capacity of mine floors

The floor strata of underground coal mines have to bear the weight of hundreds of feet of overburden concentrated on the remaining coal pillars and props. The floor also has to carry very heavy moving equipment. The load-bearing capacity of mine floors containing troublesome clay minerals will vary with the moisture content, and can be checked with radioisotope moisture and density gages.

Ventilation

Many coal mines liberate large volumes of methane gas which can form explosive mixtures with air over a considerable percentage range. Therefore large volumes of ventilating air must be distributed to every working place to dilute the methane to 1 percent or less. Radioisotope tracers are being considered for studying mine-ventilation problems.

Dust control

There are limitations on the coal-dust content of air breathed by miners. Also coal dust can form explosive mixtures with air. Radioisotopes should be considered for the study of coal-dust problems, and to facilitate dust collection.

Signal lights

Radioisotope-energized lights which emit colored light continuously for many years without external power source, have possibilities in mines as direction indicators, markers, safety exit signs, etc., which would function independent of the mine-lighting circuit. If red radioisotope lights of sufficient intensity can be developed, they could find use as warning lights on moving and stationary equipment.

Water problems

The water seeping or flowing into coal mines must be collected and removed, sometimes at considerable expense. To mine a ton of Pennsylvania anthracite, an average of more than 30 tons of water must be pumped out with a high vertical lift. Radioisotopes can be used to trace the source of water entering mines, leading to the control of inflow in some cases.

Coal preparation

Two-thirds of the coal mined in this country, or about 300 million tons annually, is mechanically cleaned. Continuous close control of washery conditions and of quality of product are important. At coal preparation plants, huge tonnages of coal are crushed, screened into sizes, cleaned, dried, and shipped with or without blending. There are many possible applications of radioisotope techniques for continuous testing, automatic control, maintenance, and research.

To date, the chief uses of radioisotopes by the coal industry throughout the world have been in coal preparation. They are already in successful use by a few coal producers and users in the United States for various purposes, such as:

1. Automatic control of the density of heavy-media suspensions used in cleaning coal.

2. Automatic control of the most efficient solids content of coal slurries being fed to filters at cleaning plants.

3. Determining the cubic foot weight of coal at various depths and locations in large storage piles, when making stockpile inventories.

4. To warn of stoppage of flow of damp coal fines from overhead bins to boilers of a large powerplant.

5. As a tracer in the hydraulic transportation of coal in pipelines.

6. Also, research investigators have made various uses of radioisotopes as tracers for studying the chemical and physical behavior of coal and coal products in various processes. Information has been obtained on important process reactions, which could not have been obtained in any other way.

Such uses can be expected to increase as their advantages become better known and appreciated. However, there are many other possible applications where research is needed to establish the possibilities such as:

Controlling the operation of coal cleaning jigs, thickeners, etc., by radiation measurement of bed densities at different levels.

Determining the particle size and settling rates of minus 200 mesh coal slurries.

Using tagged flotation reagents, flocculents, dustproofing, and freezeproofing compounds (which are applied to coal in very small amounts) to determine their selectivity, coverage, effectiveness, and ultimate fate.

Continuously weighing and/or analyzing moving coal streams.

Studying coal crushing and screening procedures.

Transportation and handling

More than 400 million tons of coal are produced annually and each ton is usually handled several or many times before ultimate use. Thus there are many opportunities for the use of radioisotopes to improve coal transportation and handling. For example:

1. Checking the condition of belt carcasses.
2. Automatic loading of cars.
3. Continuous weighing of coal in motion.
4. Applications in the pipeline transportation of coal.
5. Measuring the amount of coal in bins.

Sampling, testing, and analysis

Coal is a natural product that occurs in a wide range of ranks, purities, and types. Coal is produced commercially from some 8,000 mines, and the analysis of coals shipped from a single mine may vary somewhat with screen size and degree of preparation. Therefore, many large coal producers and users regularly sample and test coal shipments.

For several reasons, reliable coal sampling may be rather difficult and expensive; also there are delays in obtaining laboratory test results. Rapid continuous methods for testing coals are needed, which can be applied to the whole coal stream or to an aliquot portion, in order to obtain immediate test results by the use of radioisotopes. They also have important potentials for saving time and cutting costs in coal laboratory procedures.

Coal uses

About 80 percent of the coal used in this country is burned direct in many types of equipment, for power generation, process heat, and comfort heating. Most of the remainder is carbonized in coke ovens and the products used for metallurgical and chemical purposes. Coal utilization processes provide opportunities for many of the above* mentioned and additional uses for radioisotope techniques, but time does not permit itemizing such uses here.

Irradiation of coal

Limited studies made during the past several years have shown that coal is quite resistant to neutron and gamma-ray bombardment, but small effects have been found. However, research should be done on the possible effects of radiation while coal is being processed, for example, during carbonization and gasification.

Other coal researches and development uses

Present and potential uses for radioisotopes in coal research, for example, tracer techniques, are too numerous to list here. They have already provided important information on the nature of coal-processing reactions, that was obtainable in no other way.

Possibilities include basic research on the principles and reactions involved, the best engineering design of equipment, and the evaluation of performance, for most every phase of coal mining, preparation, handling, use, and the control of air and stream pollution.

Estimating coal reserves

Data on American coal reserves are still far from complete. Coal bearing formations cover about one-seventh of the area of the United States, and multiple coal beds are typical. For example, the West Virginia Geological Survey has reported a sequence of 62 minable coalbeds plus 55 unimportant coalbeds, or 117 in all, in that State. Since any coalbed may vary locally in thickness and quality, borehole logging is of great importance for assessing coal reserves.

Core drilling provides detailed information but is too expensive for generalized use. However, tens of thousands of boreholes are being or will be drilled through coal-bearing formations for other purposes, such as petroleum, natural gas, salt, and other minerals, deep water wells, etc. Radioisotope logging could provide at little additional cost, valuable information on the depth, thickness, and approximate quality of the coal beds penetrated.

Coal beds could be located and measured in boreholes by probes which measure (a) density by gamma-radiation scatter, or (b) total hydrogen by slowing down fast neutrons, or perhaps (c) oxygen by neutron bombardment activation. In each case there would be a large difference in the readings obtained from coal beds and from other strata encountered in boreholes. Besides measuring the location and thickness of coal beds, the quality could be evaluated to some extent.

COMMUNIST COAL RESERVES AND RESEARCH

Soviet Russia has now become the world's largest producer of coal, with the United States in second place. Red China is in third place and gaining rapidly. Based on recent intensive geological explorations, each of these Communist countries now claims coal reserves which far exceed the present official estimates of U.S. coal reserves. That is one reason for a more realistic study of U.S. coal reserves, since coal is basic to the Nation's prosperity and security.

From the best available information it appears that the Communist countries now have more persons engaged in coal research than the rest of the world combined. Published scientific and technical articles show that they are making very extensive use of radioisotopes, geophysical and electronic devices, etc., in their drive to surpass the Western world.

CONCLUSION

Radioisotopes are already in limited but successful use for several purposes in the coal industry. Such applications can be expected to increase as the advantages become better known.

However, most of the numerous possibilities for radioisotopes which I have mentioned are still only ideas or suggestions. Much basic research and engineering research will be required to definitely establish the technical possibilities. This is due to the fact that coal is a natural product which varies greatly in rank, type, and purity in various deposits.

Not only is there a wide variation in the composition of the organic content of various coals, but there is an even greater variation in the amount and nature of the mineral impurities which are present. Some of the minor and trace impurities have a large effect in nuclear reactions.

Therefore, systematic research will be required on the response of various coals to different kinds and intensities of nuclear radiation, in order to develop the basic facts of radiation as applied to coal. If such results are to be obtained within a reasonable time,

it appears that most of such research must be sponsored by the Federal Government.

Once the basic facts are available, the manufacturers of nuclear and standard equipment should be expected to design and market radioisotope equipment which offers definite advantages to coal producers and users.

It is believed that the survey report now in preparation for AEC, when completed and released, will stimulate much interest in the subject. If this is promptly followed by laboratory research to explore the technical feasibility of the many possibilities cited, this should greatly reduce the timelag for widespread coal industry acceptance of suitable radioisotope techniques.

Not All Is Food That's Sold as "Groceries"

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 29, 1960

Mr. CASE of South Dakota. Mr. President, when consumers complain about the increasing cost of their groceries and blame it on farm subsidies, they are often overlooking the fact that much of their grocery dollar goes for nonfood items sold in the supermarkets.

This point was effectively made in a recent roundup broadcast by the Grain Terminal Association of St. Paul, Minn.

I ask unanimous consent that the Grain Terminal Association's observations on this point in a radio broadcast on February 23 over 16 midwestern stations be printed in the Appendix of the RECORD.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

NOT ALL IS FOOD THAT IS SOLD AS GROCERIES

We stood by a supermarket checkout counter the other day and watched the customers roll up with their carts loaded to the brim. The girls behind the counters punched the cash register keys with practiced speed and skill. And while the carryout boys staggered out to the cars with heaping boxes the customers paid their bills, $20 and $30 at a crack more often than not. And it seemed to us that most of the customers paid by check.

But as farmers, you surely would have noticed the same thing that we did. About one-quarter of the items that went into those boxes were not food at all. They were light bulbs, cigarettes, aspirin, tissues, and paper towels, pots, pans, magazines, even cosmetics. You can buy just about anything in the modern supermarkets and people are doing it.

But here's the point we want to make and that you should point out to your city cousins. Most every person who buys in these great variety stores called supermarkets walks out with the preconceived notion that all the money he spent went for food. He doesn't stop to think of all the nonfood items he bought. He spent, say, $20 to stock up for a week. So it cost $20 to eat. It's natural to think that way, we suppose. But it would help the farmer's cause a lot if these supermarket patrons realized that they are spending $20 to run the house, and only part of it is actually spent for food.

The next time you are in a supermarket stop and watch the checkout counters for a few minutes. You'll see what we mean.

It is important for consumers to understand the big bargain they are getting in the food they buy and eat.

Our American Government: What Is It? How Does It Function?

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. PATMAN. Mr. Speaker, I am introducing today in the House of Representatives a House concurrent resolution proposing the printing of a booklet on "Our American Government."

For many years, the Congress has caused to be printed and distributed a document entitled "Our American Government: What Is It? How Does It Function?" The last revision was authorized by the House April 30, 1958, and by the Senate May 21, 1958. It was House Document No. 366 and contained 171 questions and answers—"a comprehensive story of the history and functions of our American Government interestingly and accurately portrayed."

The revised edition will contain 175 questions and answers if authorized as as submitted. In view of the two new States—Alaska and Hawaii—a number of new questions and answers have been added. There are other questions and answers that have been brought up to date.

As an illustration of some of the additions that have been made, I am inserting at this time proposed questions and answers from No. 142 through 145:

142. Which States were most recently admitted to the Union?

Alaska and Hawaii. By the issuance of presidential proclamations, Alaska, the 49th State, formally entered the Union on January 3, 1959, and Hawaii became the 50th State on August 21, 1959. These were the first admissions since 1912 when Arizona and New Mexico were accepted.

143. What geographical circumstances distinguish the two newest States?

Neither Alaska nor Hawaii is contiguous to the mainland of the United States; i.e., neither State directly borders on any of the previous 48 States. Although a peninsula of the North American continent, Alaska is separated from the rest of the States by Canada and the Pacific Ocean. The southernmost tip of the 49th State is some 500 miles distant from the State of Washington. In area, Alaska is the largest State, the northernmost State, and the most westerly on the continent.

Hawaii is completely separated from North America by the Pacific Ocean. It lies 2,020 miles southwest of San Francisco. The islands comprising the State extend a distance of 1,900 statute miles. They are closer to Tokyo than to Washington, D.C.

144. What was the status of Alaska and Hawaii before admission?

Organized incorporated territories. Hawaii was the last such territory. There are, therefore, no delegates serving in the House of Representatives at the present time.

145. How does the admission of Alaska and Hawaii affect the composition of Congress?

Each State being entitled to two Senators, the Senate is now increased to a membership of 100. The acts of admission assigned one House seat to each new State, temporarily increasing House membership to 437. After the 1960 census, under the provisions of current law, the size of the House will return to 435 and that number will be apportioned among the 50 States.

The index of the proposed booklet is inserted herewith. It is as follows:

INDEX

(Citations refer to question numbers)

Act: difference between bill and act, 81.

Alaska: admitted to Union, 142; previous status, 144; area, 143; number of Representatives and Senators, 33, 145.

Amendment, to the Constitution: "lame duck," 13; number repealed, 11; procedure, 10; time permitted for ratification, 12.

Apportionment, 31–32.

Attorney General, 104.

Bills: appropriation, 140; "dead," 136; deficiency, 141; difference between bill and act, 81; engrossed, 84; enrolled, 83; first reading, 111; introduced by Senator, 89; largest number introduced in a single Congress, 86; Presidential ceremony upon signing, 134; public, 88; rider, 138; sent to General Services Administration, 134; stages in House, 82; tax, 139; total number introduced since March 4, 1789, 87; veto of, 128–133.

Bill of Rights: explanation of, 8; rights enumerated, 9.

Cabinet, 162–166.

Commissioner to Congress from Puerto Rico; committee assignments, distinguished from Congressmen, pay, voting rights, 27–28.

Commitees: Committee of the Whole, 113; conference, 110; hearings, 104–105, 114; House Rules, 120; in House, 99, 102–103; joint, 108–109; records, 106; select, 107; standing, 95–98; steering, 79.

Congress (also see House of Representatives; Representatives; Senate; Senators): adjournment by President, 24; constitutional status, 18; facilities for press, 50–51; hours of meeting, 25; majority and minority leaders, 73–74; rules of procedure, 80; services available to Members for legislative duties, 43; session defined, length, 20; special sessions, powers, 22–23; term of, 19; visitors, to, 49.

Congressional districts: how determined, 31.

Congressman. (See Congress; House of Representatives; Representatives; Senate; Senators.)

Congresswoman. (See Congress; House of Representatives; Representatives; Senate; and Senators.)

Consent: unanimous, 121.

Constitution: as supreme law of land, 6; Bill of Rights, 8–9; how amended, procedure, 10; "lame duck" amendment, 13; number of amendments repealed, 11; preamble, 1; provision for electors, 14–15; provisions for "separation of powers" in the Federal Government, 7; time permitted for ratification of amendment, 12.

Delegate to Congress: distinguished from a Congressman, pay, voting rights, 27–28; number in House, 144.

Democracy: and its American sources, 1–5; a pure, 3; representative or indirect, 4–5.

Eisenhower, Dwight D.: birthplace, 160; Middle East Doctrine, 168; number of bills vetoed, by, 132.

Elections (also see Electoral college; Presidents): of Senators and Representaives, 29–38.

Electoral college, 14–17.

Executive departments, 146–168.

Filibuster, 122–125.

Government: essentials of a republican form, 2; United States as a representative democracy, 5.

Hamilton, Alexander, Secretary of Treasury, 162.

Hawaii: admitted to Union, 142; previous status, 144; area, 143; number of Representatives and Senators, 33, 145.

House of Representatives (also see Congress; Representatives): apportionment, procedure, 35; calenders, 112; customary proceedings when meeting, 78; limitation on debate, 93; officer presiding, 69; officers, of, 68; "pairing," 117–118; previous question, 119; power to choose Speaker, 71; quorum, 94; recognition of Representative who desires to speak, 92; Rules Committee, 120; rules of procedure, 80; size, 31; 33–34; steering committee, 79; voting, 115–116; wearing of hats by Representatives during sessions, 52.

Impeachment: of Members of Congress, 44.

Jefferson, Thomas, Secretary of State, 162.

Judiciary, 169–175.

Knox, Henry, Secretary of War, 162.

Laws: published in one book, 137.

Legislative Reference Service: services to Members of Congress, 43.

Mace: what it is, significance, 56.

Marshall, Thomas: remark, 67.

Monroe Doctrine, 167.

Parliamentarian: duties, 77.

Postmaster General, 164.

Presidents (also see Cabinet; electoral college): appearance before joint sessions of Congress, 161; born west of Mississippi, 160; Cabinet, 162–165; courses open on bills, 126–127; date of commencement of term, 149–160; elected after service in Congress, 45; addressed, 148, oath, 147; pensions and allowances to widows of, 158; power to adjourn Congress, 24; power to convene Congress, 22–23; qualifications, 146; salary and allowances, 156–157; State producing largest number, 159; submission of resignation, 155; succeeded by Vice Presidents, 64–65; succession, 161–164; veto power, 128–133; Washington's first Cabinet, 162.

President pro tempore, 58–61.

Press: facilities for, in Congress, 50–51.

Puerto Rico: Resident Commissioner to Congress, 27–28.

Randolph, Edmund, Attorney General, 158.

Rayburn, Sam, Speaker, 72.

Representatives (also see Congress; House of Representatives): at large, 32; addressing of communications to, 46, 48; Congresswoman, how addressed, 47; definition, official title, 26; distinguished from Delegate and Commissioner, 27–28; filling of vacancy, 38; how elected, 29; impeachment, 44; number from each State, 33; payment of income tax, 42; participation in party caucus and conference, 57; qualifications, 39; salary, 41; seat assignments, 53.

Resolutions: types, 85.

Secretary: of Agriculture, of Commerce, of Defense, of Health, Education, and Welfare, of Interior, of Labor, of the Treasury, 164; of State, 164, 166.

Senate (also see Congress; Senator): introduction of bills by Senators, 86; limitation on debate, 91; officers of, 58; officer, presiding, 59, 61; recognition of Senator who desires to speak, 90; rules of procedure, 80; wearing of hats by Senators during sessions, 52.

Senators (also see Congress; Senate): filling of vacancy, 37; how addressed, 46; how elected, 29–30; impeachment, 44; number from each State, 33, 36; payment of income tax, 42; qualifications, 40; salary, 41; seat assignments, 53; "senior," meaning of 55.

Seniority rule, 100–101.

Separation of powers: under Constitution, 7.

Sergeant at Arms: powers and duties, 76.

Speaker of the House: officer of the House, 68; Presiding Officer, duties, 69–70; House powers to choose, 71; Sam Rayburn, longest tenure, 72.

States: largest in area, 143.

Supreme Court, 169–175.

"Supreme law of the land," 6.

United States: as a representative democracy, 5.

Veto, 128–133.

Vice President: elected by Senate, 63; presiding in Senate, 59; salary and expenses, 60; vote in Senate 62; who resigned, 66; who succeded to the presidency, 64–65.

Washington, George: first Cabinet, 162.

"Whips": of the House, 75.

A Place Where Uncle Sam Doesn't Play Fair—Payments in Lieu of Taxes

EXTENSION OF REMARKS

OF

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, February 29, 1960

Mr. MOSS. Mr. President, on another matter, Mr. Bernard F. Hillenbrand, who is the executive director of the National Association of County Officials, made a speech before the Federal Bar Association here in Washington last September concerning S. 910, which is the bill for payment in lieu of taxes by the Federal Government. As a cosponsor of this bill I recognize that the Federal Government is not paying its fair share in many of the areas of our country. I ask unanimous consent that the remarks of Mr. Hillenbrand may be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

A PLACE WHERE UNCLE SAM DOESN'T PLAY FAIR—PAYMENTS IN LIEU OF TAXES

(By Bernard F. Hillenbrand)

With respect to payments in lieu of taxes to counties and other local government units with Federal Government hasn't been fair. Uncle Sam owns vast tracts of land and other large real estate holdings to which local governments must provide services and which are exempt from local taxation. In our efforts to seek a remedy from the Federal Government, we feel a little bit like the man in Lincoln's famous story. He had just been tarred and feathered and was being run out of town on a rail when someone jeeringly asked him how he liked that. "Well," he said, "if it wasn't for the honor of the thing I'd just as soon walk."

It has long been the position of the National Association of County Officials and similar groups that the Congress should authorize Federal agencies to make payments-in-lieu of taxes to local governments on these Federal holdings. More specifically, we have enthusiastically endorsed a measure now before the U.S. Congress called S. 910, a bill to provide payments-in-lieu of taxes.

BILL ANALYZED

S. 910 recognizes that the complex holdings of the Federal Government constitute a burden on local governments and authorizes payments-in-lieu of taxes on the following types of holdings.

1. Business and commercial property acquired since June 30, 1950 (roughly the beginning of the Korean war). Thus the Federal Government would make payments-in-lieu of taxes on its real estate holdings which are presently used for nearly every purpose imaginable and range all the way from manufacturing rope to use by private enterprise to manufacture of automobile parts.

2. Property held temporarily by the Government on conditional sales contracts or on property acquired by the Government temporarily for such causes as default on Government loans. At the present time this property immediately becomes tax exempt when the title reverts to the Federal Government.

3. Federal agencies would also be authorized to contribute their fair share of the cost of special assessments levied for curbs, gutters, sidewalks, street lighting, sewage, and other facilities financed through special assessments. These improvements, of course, increase the value of Federal as well as private property, and this bill would authorize the Federal Government to pay its fair share. In other words, if a community finances a street curbing project by assessing abutting property owners, insofar as the improvement abutted Federal property the Federal Government would pay its fair share of the cost of the improvement which would, of course, increase the value of the Federal holding as well as the private holdings which would pay a similar amount.

Under the terms of S. 910 agencies would be authorized to make payments in only those cases that were approved by a special board created to administer the program. No payments would be made to any county, school district, municipality or any other local government unless they could prove that the Federal installation constituted a hardship. The payments would only be made on Federal real property and there is no provision in the bill to make payments-in-lieu of taxes on personal property. The payments would be adjusted upward to reflect the actual cost to the local government unit for any special service provided to the Federal installation which was not provided to general taxpayers. Accordingly, the payment would be adjusted downward to reflect the cost of special services provided by the Federal installation at Federal expense when these services were provided to the general taxpayer. In other words, if the Federal installation had its own fire department and did not use the services of the local government fire department, their payment would be adjusted downward accordingly.

It would be the duty of the board to conduct extensive studies of the entire problems of large Federal holdings and they would be required to periodically report back to Congress with recommendations for further legislation.

STATUS

Senator HUBERT HUMPHREY introduced S. 910 and we are happy to report that the measure has 35 U.S. Senators as cosponsors. These Senators are pretty evenly distributed throughout the United States and reflect a growing awareness of the seriousness of this problem in areas outside the West. The Senate held hearings and the Senate Government Operations Committee favorably reported the bill and it was on the Senate calendar for action when the Senate adjourned without getting to the measure. It will be the first order of business when Congress reconvenes in January.

Similar bills have been introduced by approximately 12 Congressmen in the House of Representatives.

EVALUATION

Even if S. 910 does pass it will not in itself be adequate. It is recognized that it will deal with only the greatest cases of hardship and will not in itself come to grips with the total problem of payments-in-lieu of taxes. The payments in any individual case will be relatively small. One estimate is that the total payments in the whole United States will be $53 million or less.

Nonetheless, this measure does have the support of the American Municipal Association, the U.S. Conferences of Mayors, the National Association of County Officials and the Council of State Governments, largely

because it will, for the first time, give congressional recognition that the problem does exist. It will provide a form upon which local governments can document the need for comprehensive legislation in this area. More important, it will give us concrete experience through actual payments in how to administer the larger program that must surely follow.

ATTITUDE OF THE FEDERAL GOVERNMENT

It is important to note that S. 910 was a compromise measure that was actually drafted by the U.S. Bureau of the Budget in cooperation with the Congress. It was originally endorsed by the administration, and as a matter of fact, as late as a few weeks ago the Treasury Department wrote a favorable recommendation and urged the passage of S. 910. They reported that their favorable comment had the approval of the U.S. Bureau of the Budget. This was later followed, however, by a message from the Budget Bureau noting that they changed their mind and were not supporting S. 910, but rather would support legislation which called for further study of the problem.

Actually, the Federal Government has had the "slows" in this whole matter of payment-in-lieu of taxes. We suspect they are now using S. 910 as a lever to upset the effect of recent Supreme Court decisions in the Michigan tax cases. The net effect of these decisions was to open the door for States and local governments to tax the possessory interest of private individuals using federally owned property. The courts have held that when private interests use Government factories and other Government owned property under leases and other arrangements, and engage in manufacturing and business operations, that the local governments have a right under certain circumstances to tax this interest in Federal property.

It would appear that the Federal Government wants to negate the effect of these decisions by incorporating a provision in the S. 910 bill which would remove this possessory interest from local taxes.

Actually, the whole Federal position is preposterous. They propose to incorporate in a bill which deals only with Federal real property, a provision which would remove Federal personal property from local government taxation. In dollars and cents they appear to want to swap the $35 million that they would pay out under S. 910 in exchange for maybe several hundred millions of dollars of taxation which would accrue to local government units under the terms of the Michigan court decision. At the present time Michigan is a State most deeply involved in possessory interest matters, but we understand that Utah and several other States have, or hope shortly to have, legislation which will also allow them to tax this possessory interest under the terms of the Supreme Court ruling.

Unfortunately, one of the facts of life that we in local government must deal with is the realization that the States are in fierce competition, one with the other, to attract new industry and to get Goevrnment contracts. Apparently this fact has already, or will in the future, prevent many States from enacting legislation to take advantage of the Michigan decision. In other words, at the threat of losing Government contracts or discouraging new industry from being attracted to the State, most of the States apparently will hesitate to enact legislation taxing possessory interest.

FALSE NOTION

Most discussions of payments in lieu of taxes gives rise to a great deal of nonsense. We in local government have been accused of everything under the sun because we have championed this legislation. Here are some of the charges and our answers:

1. Local governments are trying to get a pipeline into the U.S. Treasury: False. In the past 25 years there have been a dozen or more impartial groups that have studied the problem of Federal holdings which now include 20 percent of the entire land surface of the United States. In every single one of the studies by outside experts the conclusion has been that the Federal Government should consent to payments in lieu of taxes on certain types of holdings. Each group has discovered that these Federal tax exempt lands do constitute a hardship on certain communities. Obviously, if all the Federal installations were evenly distributed throughout the entire United States there would be no need for an in-lieu-of-taxes program. Each community would bear its share of the cost and a payments-in-lieu of taxes program would be unnecessary. We have never proposed to have the Federal Government make payments in lieu of taxes on post offices and other installations which are uniformly distributed throughout the United States and which confer equal benefits on all of the people in the area.

The records are filled to overflowing of individual cases throughout the whole United States, of real hardships caused by Federal tax-exempt holdings. Many communities, because of local geographical factors, are completely cut off from future industrial and economic development because the only logical areas in which to expand are preempted by the Federal Government.

Anyone who wants an exercise in futility might try sometime to get the Federal Government to relinquish its control of property or buildings. As soon as one agency decides that it does not need a parcel of land, or an installation, all other Federal agencies are given a crack at it and by the time this several years clearance process is completed the original agency will find some excuse for retaining the property.

In all our testimony before the U.S. Congress we have insisted that each individual agency make payments in lieu of taxes on their own property and that it not be administered by a single, central agency. Our objective, of course, is to force each of the Federal agencies to go before the Congress and justify their need to continually hold some of these installations and Federal property. Indeed, up until about 3 years ago the Federal Government had no idea at all of how much land they owned or how many installations or the value of their real property or personal property. Even now the final report from the Federal Government has statements indicating that they may have lost a few million acres of land here and there in their accounting, or a few billion dollars worth of property that they didn't know they owned.

2. Local governments are forever trying to attract new Federal installations and once the Federal installation is established they complain about local hardship: It is true that local governments do try to attract business and industrial development in their community. This is for the very excellent reason that in order to provide an adequate level of services in the community it must have business and industrial property. Those of us who are familiar with the property tax (which is the overwhelming basis of support of most local government units) are familiar with the fact that no community composed solely of private residential development could possibly have a tax base adequate enough to provide modern education and the other services required of modern local government.

An example: One California city was considering annexing a high rise apartment house development. These were first-class luxury apartments already constructed with roads, sewers, water supplies, street lighting and all of the local government facilities already in place. An analysis revealed, however, that the number of school children concentrated in the apartment house which would require educational facilities would far offset any gain in taxes realized through adding this property to tax base. In other words, even this first-class residential development without commercial and industrial development property, could not pay its way in providing an adequate level of local government services.

You will find that every State, every county, city township, and other local government unit is well aware of these facts and hence the fierce competition to attract new business and industry. And it should be noted that when the new business and industry does locate in a community it is taxed.

3. Federal installations do confer benefits on a local community through increased payrolls: It is true that there are increased local payrolls incident to a Federal installation, but as everyone knows, in most cases, the only way you can get at this wealth is through an income or sales tax—both of which are for the most part preempted by the State Governments or the Federal Government or both. The localities still depend mostly on the property tax and these local payrolls do not directly benefit the local government financial base.

4. The Federal Government already makes payments in lieu of taxes in a great number of cases and what is the need for expanding the program: It is true that in the case of certain housing developments, certain Federal dam properties, and a great number of other instances the Federal Government has in specific cases consented to make paypayments in lieu of taxes. This, perhaps more than any other factor, would indicate the justice of our position. However, the Federal Government does not have a general policy on payments in lieu of taxes and hence a tremendous number of communities do suffer hardships since they do not come under any of the specific categories for which payments in lieu are already made.

5. The Federal Government makes Federal grants-in-aid to local communities which, in total, comes to many hundreds of millions of dollars: This is true. It should be remembered, however, that in every single instance of a grant-in-aid, the Federal Government participates only to the extent that the Federal Government has determined that there is a natural interest. Take the airport program for an example. The Federal Government has determined that it is in the national interest to have a national system of airports. They have determined that the Federal responsibility is approximately 50 percent of the cost for runways and other airport facilities. The idea is that the National Government does need a sound airport program and that localities are to be encouraged to construct the needed facilities. In other words, the purpose of the Federal aid airport program is to stimulate those communities to construct airports who might otherwise put their local funds into schools or some other purpose and thus, without Federal aid, we would not have a uniform developed system of national airports.

We think that if you examine almost every one of the grant-in-aid programs you will find that this same type of reasoning prevails and that the National Government does participate because there is a national interest and does participate financially only to the extent of that national interest.

6. Payments in lieu of taxes would cost Federal Government money and we are trying to economize nationally: It should be remembered that we are not asking for a handout. What we are proposing is a matter of right. When an installation serves a national purpose, the national taxpayer should pay the bill. We are talking about fair dealing. To the extent that localities must service tax exempt national holdings they are being put upon by the National Government. It is just as unfair as if cer-

tain communities were asked to individually support the cost of constructing an aircraft carrier or a fleet of tanks. National defense is a national responsibility and it should be paid for by the national taxpayer.

CONCLUSION

In the early days of the Republic, Federal holdings were relatively simple and, I suppose, caused only very minor local problems. With the tremendous expansion of the National Government and with the complex industrial defense and commercial and business activities of the Federal Government, the traditional immunity of Federal property from local taxation must be modified to meet the realities of the situation. What we have proposed we think is fair and equitable, it represents a very great deal of thought, not only on the part of local government officials but by a great number of outside impartial observers. We think that the time has come for the Federal Government to demonstrate its real interest in preserving good strong local government units by starting on a program to remedy what in many communities is a most serious problem. We are sure that the Federal Government is not intentionally doing this, but in many cases the Federal Governmnt's very size and the relative smallness of the individual community problem, we think often causes the Federal Government to be rather indifferent to local government problems.

The time has come now to act and we hope that we will have the support of other groups as we have now the support of the U.S. Chamber of Commerce and a great number of similar organizations.

In the recent past, particularly since World War II and with the Korean conflict, the Federal Government has been increasingly involved in activities that once were the sole province of private enterprise. This caused a great number of problems for localities and very definite hardships. Now, more recently, the Federal Government is taking this property constructed at public expense and leasing it through various arrangements to private profitmaking organizations and now want to extend the Federal Government immunity to these operations.

In the words of William R. MacDougall, the manager and general counsel of the County Supervisors Association of California, and I quote: "Not only has the Federal Government been a freeloader in the boardinghouse of local government but now they have entered into a new era, where they not only eat free but bring along a lunch pail to fill up to take to their friends."

Arguments For and Against Further Raising of Interest Rates by Passage of the Bill To Lift the Interest-Rate Ceiling on Long-Term Government Bonds

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. PATMAN. Mr. Speaker, this morning I had the very great pleasure of reading a statement prepared by the gentleman from Oregon [Mr. ULLMAN], setting out the arguments for and against passage of H.R. 10590—the bill which repeals the interest-rate ceiling on Government bonds without exactly saying so.

This statement provides an analysis which is both excellent and brief. I will insert it in the RECORD for the attention of the other Members who may wish to consider the arguments on this question:

Consideration by the House in the immediate future of H.R. 10590, a bill relating to interest rate restrictions on bonds of the United States, will require a major decision by all of us on the monetary policy of our Government. The arguments and counterarguments on this issue are not simple but in what follows I have tried to present the basic points at issue.

What does the bill propose? Its proponents label it a reasonable compromise. The facts are that the bill would in effect give the administration what it wants—twice. Under its first section, relating to refinancing, it would furnish unlimited authority to refund the Federal debt at any rate of interest through the transparent subterfuge of discounting. In addition, under its second section, the limit is openly repealed for new issues of up to 2 percent of the total outstanding debt which is subject to the statutory limitation—this means for as much as $5 billion a year, which is considerably more than the long-term bond market is likely to absorb in any one year.

Is the action sought necessary? Proponents of the bill argue that it is necessary to allow longer term financing of the debt. Related arguments say that present reliance on short-term securities are inflationary, that they complicate management of the debt. The facts are that the administration has had every opportunity to shift the debt to longer term securities under the present interest ceiling and has refused to do so. Note the figures below:

TABLE 1.—*Market yield on taxable U.S. bonds (percent per annum)*

1952	2.68
1953	2.94
1954	2.55
1955	2.84
1956	3.08
1957	3.47
1958	3.43
1959	4.08

Source: Economic Report of the President.

TABLE 2.—*Percentage of long-term U.S. bonds outstanding (10 years or more)*

1953	19.1
1955	9.6
1957	7.0
1959	5.6

Sources: Annual reports of the Secretary of the Treasury and Treasury Bulletin.

While promising to "stretch out" the debt, the administration has actually "shortened" it during a period when long-term bonds could be sold at well below the 4¼-percent ceiling. They paid lipservice to countering inflation, but at the same time channeled money out of the long-term market into the short-term market. The purpose of the ceiling is to require that long-terms be sold in periods of low interest rates rather than periods of high interest rates. Now, when their policies have made the ceiling more necessary than ever, they ask us to abandon it.

Will the action counter inflation? Proponents of the bill argue that it is necessary the fight inflation. The facts are that reliance on monetary policy (interest rate adjustment) alone to counter inflation has proved to be a "one-legged stool" and the administration has "sawed off the other two legs." While steadily working to raise the cost of money, they have failed to utilize fiscal policies that would more effectively counter inflation and have negated any possible remedial effects which higher interest rates might have. The Eisenhower tax law of 1954, with its gaping loopholes for upper income recipients and big business, was, for example, one of the most inflationary measures that could be devised.

The Joint Economic Committee has found that the tight money policy hasn't countered inflation, it has aggravated it. Note the figures below:

TABLE 3.—*Consumer Price Index (1947–49=100)*

1951	111.0
1953	114.4
1955	114.5
1957	120.2
1959	124.5

Source: Economic Report of the President.

Higher interest rates are reflected in the cost of virtually everything the consumer buys. Example: An FHA loan for a $10,000 house in 1952, repayable in 25 years, would carry an interest charge of $5,840. The same loan today would carry an interest charge of $8,840, or $3,000 more. Higher interest rates are hitting public agencies and school financing too. Look at the figures on high-grade, tax-exempt municipal bonds.

TABLE 4.—*Market yield on high-grade municipal bonds (percent per annum)*

1951	2.00
1953	2.72
1955	2.53
1957	3.60
1959	3.95

Source: Economic Report of the President.

Aside from these costs to the American people as consumers and local government taxpayers, the tight money policy costs them dearly as Federal taxpayers, in added interest costs on the Federal debt. The increase in interest rates since 1952 is now costing the taxpayers at least $2.5 billion a year in added expenditures. This item alone could mean a budget surplus which would have real anti-inflationary effects.

Is a lifting of the ceiling required by free-market forces? The proponents of the bill argue that we are at the mercy of the competitive forces of the money market. The facts are that the so-called free market in securities is nothing of the kind. Example: The open market in government securities centers around 17 New York traders who account for an estimated $200 billion in securities exchange a year and whose system of operation has been characterized by the manager of the Federal Reserve System's open-market operations as tending to result in uniform prices. Example: The Treasury Department regularly asks the advice of the American Bankers Association on the nature of proposed new issues and has, since 1953, accepted its recommendations 85 percent of the time.

A major factor in weakening the position of long-term securities has been the action of the Federal Reserve System itself. It has completely withdrawn from the market in long-term securities and has limited its purchase to 90-day bills. In 1951, long-term bonds constituted 21.5 percent of the Federal Reserve holdings. By late last year, this had been reduced to 5.7 percent. Is it any wonder that the market price of long-term securities has weakened?

What are the alternatives? Proponents of the bill argue that it must be passed because nothing else can be done to meet the situation. The facts are that even if we ignore the responsibility of the administration in creating the situation that exists, there are a great number of things that can and should be done. Lifting the interest ceiling, directly or indirectly (or both as H.R. 10590 proposes), is not one of them. The Joint Economic Committee, after lengthy hearings

carried out at our direction, has pointed up a course of action. Included are abandonment by the Federal Reserve of its bills only policy, adoption of procedures to make the market for U.S. securities more competitive, instituting callable bonds, carrying out tax and expenditure reforms, and in general utilizing adequate fiscal policies instead of relying on the one-legged stool of ever-higher interest rates.

To pass this measure would constitute a reversal of the traditional Democratic position against tight money. It would constitute an abdication of congressional responsibility in an area vital to the future economic welfare of the Nation. As the Joint Economic Committee has effectively said, to remove the ceiling would be a surrender to the demands of the administration that Congress "disarm itself unilaterally in a field over which it has both a constitutional and a legislative prerogative."

Sincerely yours,

AL ULLMAN,
Member of Congress.

New Eisenhower Tour

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 29, 1960

Mr. WILEY. Mr. President, the efforts of President Eisenhower have been uniquely successful in history in promoting the interests of, and creating greater respect and understanding for our Nation.

As successive reports of his Latin American tour come to us, I am even more deeply gratified by the splendid way in which he is again succeeding in reaffirming old friendships; establishing new ones; finding common ground for mutually agreed upon goals for the future; and generally creating a substantially improved climate of better relationships with our good neighbors in Latin America.

Recently, the Janesville Daily Gazette, a fine newspaper with a 114-year record of community service, published a thought-creating editorial entitled "New Eisenhower Tour."

In a constructive analysis of the President's trip, the editorial particularly reminds us of the historical reasons why we, in the Western Hemisphere, need to make a greater effort to work closely together for mutual progress and security.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Janesville (Wis.) Daily Gazette, Feb. 25, 1960]

NEW EISENHOWER TOUR

President Eisenhower's recent tour of European and Asiatic nations proved more successful than the most optimistic had anticipated. The new pilgrimage to Central and South American nations has objectives fully as important, and the reception in Brazil this week promises that it too will be successful.

There is one overriding aim in the President's journey southward. That is to reestablish close and friendly relationships in the Western Hemisphere, where Communist elements are attempting to gain a bridgehead. The success of these efforts, reflected in current situations in Cuba and Panama, are such that the United States cannot ignore them. However small the numbers of active workers, Latin American populations are being impressed with anti-U.S. slogans and campaigns and damage is being done to normally friendly relationships.

There is an excellent chance that the President's personal appearance tour will bring to nought the efforts of those interested in dividing American Nations and particularly of arousing suspicion and hate against the United States. To a degree which did not and cannot exist in Europe or Asia, the area of mutual interests between this country and Latin America are close and traditional. We have, for example:

(1) A common history of emergence from European colonization and dominance.

(2) Western Hemisphere defense needs, in which the United States is recognized champion, both for its own interests under the Monroe Doctrine and for the security of independence for smaller and weaker American nations.

(3) Commercial ties already important to Central and South American nations, and likely to become more so as the United States aids in building industry in its neighbor nations, and at the same time draws upon them for larger supplies of their products to support a growing U.S. economy.

(4) Traditional friendship dating back to founding days of American States, aid of the United States in their earlier years, and the pattern of government often based upon that of the United States.

There are numberless reasons why American nations must work in accord with each other. Many of these are of such self-interest that they are unlikely to be upset whatever the efforts of Reds disguised as "nationalists" may be. The President's tour however, will refresh the knowledge of neighbor populations of close U.S. ties and the great need for harmony in these days when plotters ardently work for discord.

If the Eisenhower tour does not help substantially to weld the Americas together—in view of the success of the more difficult Asian trip—it will be astonishing.

In Defense, I Bank Proudly on President, Says Vinson

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Evening Tribune of February 24, 1960:

IN DEFENSE, I BANK PROUDLY ON PRESIDENT, SAYS VINSON

(By Ray Tucker)

WASHINGTON.—A veteran Georgia Democrat recognized on and off Capitol Hill as "the father of the modern American Navy" has come to the defense of President Eisenhower in the great debate over the Nation's military power and preparedness for a clash with Russia.

Deprecating current charges and countercharges on this controversial issue of the presidential year, he attributes them to the approach of the election. Gently but positively he suggests that these nonseasonal Fourth of July orators "keep their shirts on," and trust the American people to meet future emergencies as they have in World Wars I and II and in Korea.

The quiet but effective voice in the midst of partisan clamors is that of Representative CARL VINSON, chairman of the House Armed Services Committee and head of the Naval Affairs Committee for many years before the consolidation of the Defense Department.

His recent speech before the midwinter banquet of the U.S. Reserve Officers' Association was generally misreported as extremely critical of the administration's policies. The actual transcript, however, as verified by him, places him in disagreement with many prominent Democrats, including the four senatorial seekers after the party's presidential nomination.

After noting that the bipartisan spirit on national defense and foreign affairs usually vanishes in election years, he said:

"I, for one, still cling to the old-time nonpartisan bipartisanship. And to prove it, I want to make this clear: As in regards the kind of military protection our country should have, I will bank proudly and confidently on one of the great commanders of all history—Dwight D. Eisenhower."

VINSON also defended the President against Kennedy-Johnson-Symington-Humphrey charges that Eisenhower had sacrificed the Nation's military needs on the altar of a balanced budget.

"I cannot agree," he said, "that the stability of our currency, the vigor of our economy, the spirit of our citizenry, and the cost consciousness of the Pentagon are sworn enemies of our Nation's strength."

In discussing military preparedness as reflected in congressional appropriations, VINSON praised the forbearance of the American people in paying such heavy taxes for national defense and foreign aid, and appeared to criticize Congress.

He conceded that the legislators had reduced budget requests for national security by only 3 percent during last 14 years. But, despite the Communist menace, the invasion of South Korea and turbulence in many other areas during that period, he pointed out that Congress had increased Pentagon requests only in 3 years over that period for a total of $1,700 million.

VINSON also agreed with administration and Pentagon military experts that, in preparing for a possible conflict with Russia, the United States must assume calculated risks.

If the various service heads did not disagree as to the Nation's needs, he said, "I would truly cry out, "God save the Republic."

In closing a speech which has attracted great attention on Capitol Hill and at the White House, in Republican and Democratic political circles, the veteran Georgian asked what he considers to be the basic and central question of the great debate:

"Where today is our leader, military or civilian, who would choose for the American people the Soivet strength complex of today or tomorrow in preference to our own?"

Tommy Hayes of Beaumont, Tex., Is Young Speaker for Democracy Who Shows Great Promise

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 29, 1960

Mr. YARBOROUGH. Mr. President, all of us in the Congress have been hon-

ored and pleased to have in Washington this past week the distinguished young winners of the annual "I Speak for Democracy" contest from our respective States.

It is my pleasure to call to the attention of the Senate Tommy Hayes, of South Park High School in Beaumont, the son of Dr. and Mrs. Edwin S. Hayes, 1387 Pipkin Street, the Texas State winner. His 5-minute speech on the Constitution is top quality and one only needs read it to understand it was almost sure to be a winner.

The sponsors of the "I Speak for Democracy" contest—the National Association of Broadcasters, the Electronics Industries Association and the Veterans of Foreign Wars—warrant strong commendation. The $1,500 scholarship they award to each State winner is a very worthwhile contribution to the higher education of extremely able youngsters.

I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "I Speak for Democracy," by Tommy Hayes.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Tommy Hayes)

Think with me for a few minutes of Longfellow's beautiful poem:

"Thou, too, sail on, O Ship of State!
Sail on, O Union strong and great!
Humanity with all its fears,
With all the hope of future years,
Is hanging breathless on thy fate.
We knew what Master laid thy keel,
What workmen wrought thy ribs of steel,
Who made each mast and sail and rope."

A ship is constructed keel, then hull, then deck. So has our democracy been built and welded together in a great ship, our Constitution, our Ship of State.

Emblazoned upon the pages of our history is the story of the building of this great ship. The keel was laid in Old Federal Hall. Fiery, bold Alexander Hamilton, solemn George Washington, quick-tempered Robert Morris, quiet James Madison, old Benjamin Franklin—all were there listening to the Voice of Democracy instruct them until a perfect keel was attained.

Each one of us has experienced the reliving of this spirited scene in our history classes. We have seen in our imagination our framing fathers deliberating and resolving. "But they were not without assistance. A great host of unseen observers gathered there. Plato and Aristotle were there, preaching once more the principles of their Greek democracy. The Pilgrim fathers were there. The men of the Magna Carta—all stood in a solemn row. They were motionless, but they were voting."

The men of 1787 who fashioned our Constitution were not faddists, nor were they dreamers. They were inspired by the urgent need for a more perfect union. They were ordinary men who sought equal rights for themselves and their descendants. They fought for a stable government based on the freedom of the individual. Truly, the voice of democracy steadied the hand of James Madison as his quill began: "We the people of the United States;" thus with the signatures of 37 names was forged the keel of our ship of state.

This written Constitution of the United States is a document that occupies only 5 pages in the World Almanac. Its 4,000 words can be read in less than half an hour. Yet this small, outwardly simple document has withstood the growing pains of a nation for almost two centuries. What, then, makes our Constitution so different?

A democratic government was perfected which has its roots in the rights and obligations of its citizens—the right to worship under a cross, a star, a dome, or a steeple, or not to go to any church at all; the right to free speech, the right to a secret ballot. Here for the first time in the history of government the people were dealt with not as a mass, but as individuals.

Many generations have hammered and added that keel into a nearly perfect ship of state. Washington, crossing the ice-clogged waters of the Delaware laid the hull. Abraham Lincoln, Woodrow Wilson, the countless millions in World Wars I and II add the ribs of steel and the deck. The voice of democracy spoke through them so that you and I might inherit the fundamental rights and obligations of freedom.

In this era of worldwide cold war every nation is searching for a master ship of state. The voice of democracy reminds us that we must adhere to wisdom and peace. We must stop assuming that this is a take all, give nothing way of life. We must share American democracy with all of those who seek that level of dignity. As the late William Allen White once said, "Liberty is the only thing you cannot have unless you give it to others."

We of the 20th century, like our Founding Fathers, must hammer out a truly master ship to weld together the nations of the world in peace. We must say with the poet of that master ship:

"Our hearts, our hopes are all with thee, our prayers, our tears, our faith, triumphant o'er our fears—are all with thee—are all with thee."

Urgent Need for Gas Bill

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. JARMAN. Mr. Speaker, many of us in the Congress are hoping for some leadership from the White House in the attainment of legislation that makes clear the fact that independent producers of natural gas cannot be regulated on a utility-type basis. It is imperative that a gas bill be passed by the Congress and signed into law by the President. With that objective in mind, I believe that Members of Congress should read the following resolution, passed recently by the Interstate Oil Compact Commission:

RESOLUTION—INTERSTATE OIL COMPACT COMMISSION

The Interstate Oil Compact Commission, by resolution, has, on numerous occasions, called attention to the fact that the producers of natural gas cannot be regulated on a utility type basis, and that the exploration for and production of natural gas is a hazardous business that must be given the proper incentive in order to insure an adequate supply of this product to the Nation, both in times of peace and national emergency.

The Congress of the United States has several times considered legislation that would free the independent producer in his operations. The Interstate Oil Compact Commission thinks that such legislation must be adopted in order to create an incentive for the independent producer to continue to find new reserves of this most valuable product. It is the considered judgment of the Commission that the conservation programs of the various States will be hampered unless remedial legislation is passed that will definitely say that the authority to conserve natural gas is the authority of the States and it is also the judgment of the Commission that through such remedial legislation gas will be available at a lower cost to the ultimate consumer. It is only through true conservation by the States of this great natural resource that the consuming public may be assured of an adequate supply: Now, therefore, be it

Resolved by the executive committee of the Interstate Oil Compact Commission duly assembled this 15th day of February, 1960, in Oklahoma City, Okla., That it again be called to the attention of all interested parties they be urged to continue to work so that Congress and the President will understand that such remedial legislation is an absolute necessity.

LAWRENCE R. ALLEY,
Executive Secretary.

Criticism of Senator Byrd of West Virginia on Poll Tax Amendment

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, February 29, 1960

Mr. BYRD of West Virginia. Mr. President, on February 8, 1960, the Charleston (W. Va..) Gazette, ran an editorial criticizing me for my vote against the Javits poll tax amendment. I wish to have printed in the Appendix of the RECORD the editorial, together with a letter which I wrote to the editor of the Gazette in explanation of my position. The editor printed a portion of my reply in a later issue, but my entire response did not appear, undoubtedly because it was too lengthy.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

SENATOR BYRD FAVORS SOUTH VERSION OF DEMOCRACY

"Southerners * * * won the only real fight of the day."

That's the way the New York Times, a responsible newspaper, described the defeat of the Javits bill, which would outlaw the poll tax by a simple statute.

The bill, offered by JACOB K. JAVITS, Republican, of New York, was beaten with the help of a West Virginia Senator, ROBERT C. BYRD.

BYRD, who votes with the southern bloc more or less regularly, joined Senator LYNDON JOHNSON, Democrat, of Texas, and Senator EVERETT MCKINLEY DIRKSEN, Republican, of Illinois, in supporting another poll tax measure which would require a constitutional amendment and which, therefore, isn't likely to stir up any trouble. The Javits bill was the key vote on the important civil rights issue.

JENNINGS RANDOLPH, the other West Virginia Senator, declined to join BYRD and the Dixiecrats on the touchy issue and cast his vote for the Javits bill. RANDOLPH is a liberal. During his campaign for office, he was accused of being a New Dealer. He gladly admitted the charge.

RANDOLPH's consistent position on civil rights is creditible, we think, and we trust

it has been watched by all West Virginians who believe in democracy as traditionally defined, but not always practiced, in America.

BYRD, on the other hand, seems at times to be infected with the primitive conservatism of the wool hat. His campaign devices—the fiddle, the Sunday school forum, and the Edgar Guest poetry—are embarrassingly similar to the techniques of the Bayou gallus-snapper.

Further, he has taken to frequent voting with the southerners, and it wouldn't be unfair to deduce from the record that he favors the tortured version of democracy practiced in the South.

We don't like to think that ROBERT C. BYRD accurately represents the position of the people of West Virginia. If he does, it may be to the discredit of the people.

He by no means represents the position of the Charleston Gazette.

FEBRUARY 22, 1960.

The EDITOR,
The Charleston Gazette,
Charleston, W. Va.

DEAR SIR: In the February 8 issue of the Charleston Gazette, an editorial was printed under the headline, "Senator BYRD Favors South Version of Democracy." The editorial attacked me for voting against the Javits amendment, which was erroneously referred to as the "key vote on the important civil rights issue." I was mentioned by the anonymous writer of the editorial as being "infected with the primitive conservatism of the wool hat," and I was criticized for "frequent voting with the southerners." The writer stated that he did not "like to think that ROBERT C. BYRD accurately represents the position of the people of West Virginia," and that, if I did so represent the people, "it may be to the discredit of the people." He closed his editorial with a sentence stating that I, by no means, represent "the position of the Charleston Gazette."

It is certainly not my intention or desire to attempt to answer every critical editorial concerning me. "What I must do is all that concerns me." This is a rule which is, in the words of Emerson, "equally arduous in actual and intellectual life, and it may serve the whole distinction between greatness and meanness." "It is the harder," said Emerson, "because you will always find those who think they know what is your duty better than you know it."

I feel it incumbent upon me, however, to reply to the editorial because it presents a distorted picture of my position in voting against the Javits amendment. Senator JAVITS' amendment proposed to prohibit, by statute, the poll tax, and it was offered as a substitute for the proposal by Senator HOLLAND, of Florida, to prohibit the poll tax by a constitutional amendment. The defeat of the Javits amendment by a vote of 50 to 37 followed a vote by which the Holland amendment was agreed to 72 to 16.

As a Member of the U.S. Senate, I took an oath to uphold the Constitution. On the basis of my limited understanding of the Constitution and certain court decisions pertinent to the subject matter of this correspondence, I feel that the States have the power to establish voting qualifications. The Javits proposal would have had the Congress say that a certain requirement, to wit, payment of a poll tax, should not be a qualification for voting. The Javits proposal, then, sought to amend the Constitution by statute. The Constitution clearly provides procedures for its own amendment, and amendment by statute is not among them (art. V, U.S. Constitution).

Authority for the statement that the Constitution specifically vests in the States the power to establish voting qualifications can be found in Article I, sectiond, 2, and in Article II, section 1, of the U.S. Constitution, the former provision dealing with the election of Members to the U.S. House of Representatives, and the latter provision dealing with the election of the President and the Vice President. The Seventeenth Amendment to the U.S. Constitution provides that the qualifications of voters in senatorial elections shall be fixed by the States in precisely the same manner as is provided in Article I, section 2, for the election of House Members. Additional authority for the contention that this power rests with the States may be found in a reading of the lower court's decision in *Butler* v. *Thompson* (341, U.S. 937), later upheld by the U.S. Supreme Court where the following language was used:

"To make payment of poll taxes a prerequisite of voting is not to deny any privilege or immunity protected by the 14th amendment. Privileges of voting is not derived from the United States, but is conferred by the State and, save as restrained by the 15th and 19th amendments and other provisions of the Federal Constitution, the State may condition suffrage as it deems appropriate."

A further court decision buttressing this point may be found in *Breedlove* v. *Suttles* (302 U.S. 277, 283, 58 S. Ct. 205, 82 L. Ed. 252), which held that a poll tax prescribed by the Constitution and statutes of the State of Georgia did not offend the Federal Constitution.

I voted to prohibit, by constitutional amendment, the poll tax as a voting requirement. I know of no person who questions the propriety or legality of that approach, whereas there are many constitutional lawyers of eminent reputation who have questioned the statutory procedure. The former Senator from Idaho, Mr. Borah, was one, and I could name others who have taken the same position throughout the many years in which Congress has been debating a repeal of the poll tax by a statutory route.

References in the Constitution to voting qualifications are not there by chance; they are there as a result of careful and deliberate thought upon the part of our illustrious Founding Fathers, who were wise and patriotic men—men who were guided in their decisions by a profound and unselfish interest in the future of their country, not by the emotions borne upon passing political winds. These provisions were later ratified by the States and have been upheld by the courts over the decades.

The foregoing constitutes an accurate presentation of the reasons why I voted as I did, and in my judgment they are unassailable reasons. I am confident that my position was constitutionally sound, and I am content to rest my case on that basis.

I welcome and expect criticism, but I think that it should be constructively intended and constructively offered. As Burke said, "No man has ever a point of pride that was not injurious to him," so no man has ever a defect that was not somewhere made useful to him. The stag in the fable admired his horns and blamed his feet, but, when the hunter came, his feet saved him, and afterwards, caught in the thicket, his horns destroyed him. So, every man in his lifetime needs to thank his faults. Our strength grows out of our weakness. The indignation that becomes aroused with hidden force does not prick itself, but is put in motion when one is stung and unfairly assailed. Being pushed, tormented, and defeated, one is put upon his manhood and learns his ignorance; is cured of his conceit, and is kept humble. "The wound cicatrizes and falls from him like a dead skin and when others would triumph, lo! he has passed on invulnerable."

Undoubtedly, there are many fine people who work for the Gazette, and I think that I have some friends among them. I am constrained to think, however, that even they would be the first to disagree with the implication in the last sentence of the editorial—that a Senator, or any public official for that matter, is elected to represent "the position of the Charleston Gazette" or any other newspaper, individual, or group.

Sincerely yours,

ROBERT C. BYRD,
U.S. Senator.

Still Expendable

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald, Rock Hill, S.C. of February 25, 1960.

STILL EXPENDABLE

An astonished group of cotton textile manufacturers were given the word in Charlotte this week by Henry Kearns, Assistant Secretary of Commerce. He told them that after spending many hours pondering textile problems on a global scale he had reached the conclusion that the prosperity of American mills was not affected by foreign imports.

Mr. Kearns' remarks were profoundly disturbing for several reasons. It was disturbing that he had reached a statistical conclusion contrary to logic, economic law, and recent experience in the textile industry.

More disturbing was the fact that he was speaking as the Commerce Department's expert on textiles and reflecting, apparently, the official thinking of the administration on this subject.

These two things were obvious and, if taken alone, would be enough to indicate that the textile industry's troubles are far from over. But, underlying Mr. Kearns' conclusion on imports is a more serious question: Why did he come to Charlotte and advance such an untenable theory?

The most obvious answer is that he wants American textile manufacturers to believe him. It is necessary that they believe him if he and his associates in the Commerce and State Departments are to have a free hand at the next meeting of the party nations to the General Agreement on Tariffs and Trade.

He said: "How can we advocate a program of restriction in trade—either domestic or foreign?—for trade is the means by which progress is transmitted into reality to the people."

If this statement has an ominous sound, it is because it is a restatement of a fraction of the old one-world theory of the State and Commerce Departments. By people, in this context, Mr. Kearns means people of the world. Those in the United States are already enjoying progress transmitted into reality. They need no assistance from Government beyond a reasonable protection from low-wage foreign competition.

His assertion that imports of underpriced cotton goods do not affect the health of the American industry ignores the experience of several years ago. When Japanese cotton imports were unrestricted the bottom dropped out of the market and bankruptcy faced the industry. When quotas—even voluntary quotas—were adopted the industry began to recover.

Textile men may agree privately that elimination of marginal and obsolete mills during this period was a good thing. But if Mr. Kearns is laying the groundwork for a resumption of unrestricted imports, for further GATT concessions, then the next layer of mills to be peeled off the industry will be those that are now operating at a profit and furnishing steady employment to American citizens.

These are realities which no mendacious conclusion on the effect of imports can deny. So, it is shocking to find Mr. Kearns back at the old one-world stand trying to sell textile men a premise which, if accepted, could lead only to further demolition of their industry.

Removal of Interest Rate on Certain Government Bonds

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, February 29, 1960

Mr. FREAR. Mr. President there appears in the current issue of the Savings Bank Journal a very timely and interesting article by Mr. John deLaittre, president of the National Association of Mutual Savings Banks.

The article deals with the problems attendant to the 4¼ percent ceiling on the interest rate which can be paid on government securities with a maturity of 5 years or more.

The cost of managing the Federal debt is a matter of concern to all Members of this body and I ask unanimous consent that the article by Mr. deLaittre be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT'S PAGE

President Eisenhower has repeatedly requested that Congress remove the 4¼-percent ceiling on the interest rate which can be paid on U.S. Government securities with a maturity of 5 years or more. He reiterated this request in his 1960 Economic Report to the Congress.

The mutual savings banking industry has gone on record in support of this administration request as early as December 1958, and as recently as February 3, 1960. We have done so principally because of our deep interest in combating inflation and protecting the dollar value of the savings entrusted to all institutions. We have also done so because of our earnest desire to fulfill our long-term economic function of promoting personal savings and helping to finance an expanding economy.

Surely those who oppose the President's request are as interested in preventing inflation and fostering economic growth as those who support the proposal. But they view the current ceiling rate as a deterrent to increasing the cost of managing the Federal debt and thus holding down interest rates in general. This control of interest rates, they contend, is an important anti-inflation weapon and one in the broad public interest.

But do the events of 1959 bear them out in these contentions? Can we expect a reversal in these events in an expanding economy in need of capital funds? Is the recourse to short-term financing by the Treasury conducive to that higher level of personal savings acknowledged by all to be essential to sound economic growth? And, finally, do fixed interest rates foster that freedom of the marketplace which has characterized American economic life and been the wellspring of its growth?

At the second Washington conference, pictured on pages 22–27 of this issue of the Journal, the savings banking industry expressed its views on these questions. We pointed out that the ceiling rate on long-term Governments had not had the desired effect of holding down interest rates in general or the cost of managing the Federal debt.

Interest rates have risen to the highest level in 30 years. Financial analysts have estimated that short-term interest rates are at least one-quarter of 1 percent higher than they would otherwise be because of the added pressure of Treasury borrowing in this area—an action unavoidable under the ceiling restraints in the long-term area.

The pressure of Treasury short-term borrowing has been particularly acute because of increasing credit demands from the private sector of the economy. As these demands have mounted, interest rates have risen and terms have been shortened. The effect has been to add more steam to inflationary pressures.

The continued upsurge in the economy in 1960—readily agreed upon by most observers—will only mean more credit demands. In this climate, with the Treasury forced to rely heavily on offerings of short-term securities, can we expect anything but a repetition of 1959 developments, with perhaps even more serious effects? Individuals, not heretofore interested, will be attracted to short-term Government securities; this will mean even more withdrawals of funds from thrift institutions; and long-term capital to finance new homes, schools, and business facilities will be sharply reduced. Moreover, uncertainty about the effect of future short-term Treasury offerings on deposits will cause savings banks to reduce home mortgage commitments. The money market will tighten further, and a cumulative rise in interest rates is possible.

If the Treasury were permitted greater flexibility in its debt management operations, Congress would be helping in the maintenance of economic growth without inflation. For instance, an advance refunding program, in which long-term securities would be offered at market rates in exchange for low-coupon Government securities, would permit the Treasury to lengthen the debt and reduce the pressures of continuing refinancing. No new money would be tapped in such an exchange operation, there would be no drain of savings, and the possibility of attracting new savings into thrift institutions would be greatly enhanced. Thus more money would be available for mortgages, any need for an emergency Government financing to bolster the homebuilding industry would be obviated, and the upward push on interest rates in both the short- and the long-term markets would be alleviated.

Thus we could hope for reduced fears and expectation of inflation. We could then realistically hope that the temptation to find speculative hedges against dollar erosion would not be so prevalent and that savings for long-term purposes in thrift institutions would increase as personal incomes rose.

Finally, the basic tenet of our free enterprise economy—that buyers and sellers, borrowers and lenders compete in open markets for goods, services, and financial claims—would be operating. Last month we wrote to the chairman of the Senate Finance Committee, the Honorable HARRY F. BYRD: "The only ultimate alternative to permitting the Treasury to compete freely on the basis of interest rates and other terms is to turn to Federal regimentation requiring investors directly to purchase U.S. Government securities." Surely this is contrary to our free, democratic society.

We advocate lifting the ceiling rate because we are aware of the close relationship between Treasury financing programs, inflation, and the cause of thrift. Mutual savings banks have an important job to do in the decades that lie ahead—one they have successfully done for nearly all the years that the American Nation has been in existence. That job is the promotion of thrift and the investment of small deposits of many savers in sound, productive enterprises, both public and private.

Savings banks as well as other thrift institutions should not be hampered in their efforts to increase the rate of savings and to supply noninflationary funds to the long-term capital market. The current interest ceiling has proved to be such a hampering influence. We need more savings, not less; and we need these savings moving into the long-term market. These goals can best be met in an environment free of artificial and unrealistic restraints.

JOHN DELAITTRE,
President, National Association of Mutual Savings Banks.

Career of William Howard Taft

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in a letter to the editor of the New York Times, Charles P. Taft outlines the legislative policies of his father, the late William Howard Taft, former President of the United States and Chief Justice of its Supreme Court.

[From the New York Times, Feb. 18, 1960]

WILLIAM HOWARD TAFT'S CAREER

To the EDITOR OF THE NEW YORK TIMES:

Your news story on Senator JOHN KENNEDY's speech at the National Press Club on January 14 included the following:

"The address was sprinkled with historical references, the effect of which was to classify President Eisenhower with such 'weak' Presidents as Buchanan, Taft, and Harding."

I suppose I am a biased commentator since my father is involved. But I submit nevertheless the following:

My father was in more ways than one a modern Republican. He put through a postal savings system, opposed by the banks; a corporate income tax, denounced by the National Association of Manufacturers; measures for mine safety, and employers' liability, and workmen's compensation on interstate carriers, opposed of course by the roalroads and coal companies; increase in control of the Interstate Commerce Commission over railroad rates since the bill under Roosevelt did not actually control rates at all; increase in postal rates on magazines. He started the Children's Bureau, and vetoed a literacy test for immigration. He put through the reciprocity treaty with Canada, and his Attorney General started 88 antitrust actions, many more in 4 years than Theodore Roosevelt in 7 or Woodrow Wilson in 8.

As Chief Justice he changed the whole tone of labor decisions and wrote the opinions in the Stockyards and Grain Exchange cases which laid the basis for sustaining the Wagner Act.

It seems hardly fair to describe him as "weak" or to put him in a class with President Harding.

CHARLES P. TAFT.

CINCINNATI, OHIO, *February 9, 1960.*

Every Sheriff Would Do Well To Follow Al Christopher's Lead

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. JENSEN. Mr. Speaker, Sheriff Al Christopher of Fremont County, Iowa, has a long record of outstanding service to the people as is so well explained in the following article from the Council Bluffs Nonpareil of Council Bluffs, Iowa. Al Christopher has proven that child delinquency can be reduced to a minimum by counseling with our youth beyond the call of duty as a sheriff.

I have known of Al's good services all during his 22 years as sheriff of Fremont County as I, too, have been a public servant for the people of Fremont County, Iowa during that period.

The newspaper article follows:

SIDNEY.—Maybe Fremont County Sheriff Al Christopher isn't the dean of Iowa law enforcement officers. But he's a front runner for the honor.

His recent filing for reelection to the sheriff's post emphasized the fact that he has a total of 32 years behind him in the Fremont County office.

The first 10 of these were served as deputy sheriff. He is presently completing his 22d year as "headman."

"It has been a most rewarding experience and the folks in this county have been mighty good to me," Christopher reflected.

A bit of a review of the crime situation in his county reveals that perhaps the sheriff has been more than a little good for the county.

FEW JUVENILE PROBLEMS

Fremont County ranks among the lowest in the State in juvenile problems. What is the answer?

"We think we can prevent a great deal more trouble than we can cure," the veteran lawman pointed out. He and his deputy, Ed Collins, divide a regular tour of night duty.

"Whenever we find a youth, or a group of them, prowling around with nothing particular to do after usual going-home hours we stop them for a little chat," Christopher said. "When we find signs that everything may not be quite on the up and up we request the youth, or youths to stop into our office the next day."

Once at the sheriff's office, the young people get a good heart-to-heart talking to. They are told they must report the incident to their parents.

"We give them a couple of days to talk to their folks and then we make a point of checking with the parents," the sheriff said.

PARENTS UNAWARE

"Many times the parents are not aware that the young people were not where they belonged and in a very big percentage of the cases we seldom find that youth on the loose again."

This companionable approach to law enforcement has paid large dividends in a number of ways. First of all, as noted, it has helped in bringing about a low juvenile crime rate.

Secondly, Christopher has a sizable file of letters from young people, now well established in life, thanking him for the boost his office gave them in the right direction.

Thirdly, and Christopher recalls this fondly, the cordial relationship helped him crack one of his biggest cases.

"It was Kenneth Kitts at his heyday," Christopher recalls. "He pulled a job in Tabor and we were without any tangible leads.

"Then a young fellow came to my office to report that he and his girl had been watching the moon that night, had observed the strange car coming from the alley, had taken down the license number and was turning it in for what it might be worth."

LEAD US TO HIM

"It was a lead directly to Kitts and not only did we make the arrest but we secured a conviction at a time when he was playing fast and loose all over this part of the country."

An affable softspoken individual, Christopher became an officer because of another man's election.

"I was working for John Redinbaugh in his garage in Tabor when he walked in one morning and called me out from under a car to tell me he had been elected sheriff.

"He told me he was looking for a deputy and when I started trying to think of some good prospects he scared me half to death by telling me it was myself he had in mind."

That was the start of the law career for the Fremont County born and raised native son.

Christopher is particularly proud of the complete records and files in his office.

"We have a file on every conviction, every commitment and every juvenile case as well as every coroner's inquest," he pointed out. "This information is invaluable and time after time has provided leads that enabled us to anaticipate a crime before its commission or to quickly put our hands on a suspect after a crime."

RECALL FLOOD READINESS

Not particularly in the line of law enforcement but indicating why many Fremont County citizens swear by their sheriff was their flood experience.

Through the years Christopher had kept a close record of the various floods in the county, their location and severity. Most of these, of course, were on the west end of the county along the Missouri River lowlands.

"It was easy to see that some day a big flood could cause a tremendous crisis in that area," he noted.

Against that day the sheriff carefully compiled a file listing the owners and locations of such rescue equipment.

MOVED AROUND FAST

So it was that in 1952 when the big one really hit. Fremont County was as ready as it could be. In jig time, corn was shelled and moved, livestock transported to higher ground and late-leaving citizens were brought out by boat.

"Many of the bottom farmers have told me that our preparedness saved them thousands of dollars," Christopher said.

The sheriff had praise for his deputy.

"Ed is a natural and as valuable to me as my right hand," he smiled.

Now 59 years old, Christopher's son and two daughters are married.

A Warning to Us All

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. KEARNS. Mr. Speaker, I believe my colleagues in the Congress will be as perturbed as I to read the following articles, a series of two, which were written by Mason Denison last week for his syndicated column, the Pennsylvania Story.

Immediately following Mr. Denison's columns, I submit an editorial from the New Castle (Pa.) News of February 24, 1960.

A serious problem faces this country with imports exceeding exports at an estimated excess of $2 billion for this fiscal year. Mr. Denison's disclosures are most significant, therefore, not only for the Commonwealth of Pennsylvania but well exemplify what is probably happening in every other State in the Union.

The articles follow:

[From the New Castle (Pa.) News, Feb. 23, 1960]

THE PENNSYLVANIA STORY

(By Mason Denison)

(First of a series of two)

HARRISBURG.—Is Pennsylvania destined to lose another sleeve of its economic shirt as a result of policy laid down in Washington by the U.S. Bureau of Public Roads in the construction of the gigantic Federal interstate road system in Pennsylvania?

At the moment the point is of prime concern to officials here on Capitol Hill—so much so, this column has learned that the State departments of highways has filed a detailed four-page letter taking strong exception to a U.S. Bureau of Roads directive issued under date of December 31, 1959.

That directive to all State highway departments prescribed policies and procedures regarding the use of material of foreign origin in Federal aid and other State supervised cooperative highway work.

FOREIGN ORIGIN

It is the material of foreign origin and nondomestic material referred to constantly throughout the Federal directive that is of considerable concern to Pennsylvania.

In a burcaucratic nutshell the memo specifies that roadbuilding materials of foreign or nondomestic origin are to be used in Federal roadbuilding programs in the various States when with 6 percent added to the bid price (incorporating foreign-produced materials), it is lower than the bid price submitted using domestic materials.

The memordanum states pointblank:

"The contract documents shall specifically provide that, for bid comparison purposes only, the total bid price for the entire contract of any bidder offering a nondomestic construction material thus restricted shall be increased by an amount equal to 6 percent of the price of bids for each item covering such material. The contract amount of any contract awarded shall be the amount of the bid as submitted."

DOMESTIC MATERIALS

The important point on this score at the moment centers around the fact that the

use of domestic roadbuilding materials—as opposed to the introduction of cheaper important materials—plays an amazingly important part in the economy of Pennsylvania.

Just how important this role is to Pennsylvanians everywhere will be detailed in this column tomorrow.

But, in addition to the economy factor, there is another curious aspect to the Federal directive. This is it:

Routinely, the State department of highways inspects its sources or points of origin of manufacture of the materials used in building its roads—to insure that the materials produced are satisfactory and meet requirements of the department.

Quite obviously it is impractical to send inspectors to Germany, or any other foreign producing point, to follow this check-through system.

On this point the U.S. Bureau of Public Roads directive states:

WILL NOT APPROVE

"Restrictions upon the use of nondomestic construction material predicated upon the State's estimated cost or anticipated difficulty of making analyses, tests, or inspections at the place of manufacture shall not be approved by the Bureau of Public Roads" unless the individual highway departments find and determine, in effect, that conditions are not being met at place of foreign manufacture.

At this rate Pennsylvania taxpayers can get ready to subsidize inspection trips to Europe and other low labor cost production countries.

In more ways than one it is small wonder those concerned with an already lagging Pennsylvania economy are on the warpath.

[From the New Castle (Pa.) News, Feb. 24, 1960]

THE PENNSYLVANIA STORY

(By Mason Denison)

(Second of a series of two)

HARRISBURG.—There can hardly be any doubt as to the intent of the U.S. Bureau of Public Roads memorandum to States setting up provisions for use of foreign material in roadbuilding, as opposed to locally produced materials, when the following paragraph on "exemptions" is noted:

"Notwithstanding any other provisions of this memorandum, a State highway department may request the Commissioner of Public Roads to approve the use on any project of only domestic construction material and the Commissioner of Public Roads may grant such approval if the State highway department submits evidence showing to the satisfaction of the Commissioner that the use of nondomestic construction material may endanger the national security or the national interest, or that such domestic construction material will be substantially produced in areas of substantial unemployment."

DOMESTIC MATERIALS

Item. Pennsylvania's Department of Highways has specified in the past that "domestic materials"—Pennsylvania materials—must be used in highway construction work. About a year ago the U.S. Bureau of Public Roads in "informal" manner requested States to use foreign produced road materials when cheaper.

The Pennsylvania Department of Highways declined to go along and was backed by a ruling from the State Attorney General.

Now comes the memorable memo of December 31, 1959 spelling out in printed words what is expected of various State highway departments on the foreign produced material front.

And it is under the section quoted previously that the State department of highways has moved to take advantage of the "exemptions" paragraph. The department in its "letter of exemption" duly requested "authority and approval to restrict steel and cement of domestic origin on all Federal-aid highway projects in Pennsylvania.

STEEL AND CEMENT

Steel and cement are big items in Pennsylvania's road building programs and here are some economic points worth considering if underselling foreign steel and cement materials are permitted to be used, in this State at least:

Pennsylvania is the foremost steel producing State in the Nation—with the value of steel produced in Pennsylvania alone in excess of $7 billion.

It takes about 100 tons of steel to build a mile of highway.

Steel production uses some 3 million tons of coal.

Not only does Pennsylvania manufacture more steel than any other State, it also ranks first in the manufacture of cement. The annual dollar value of cement manufactured in Pennsylvania exceeds $130 million.

Last year capacity output of cement was in excess of 61 million barrels. According to U.S. Department of Mines' figures approximately 15 million barrels were used within Pennsylvania during the year.

THREE PERCENT

Significant item: nearly 3 percent of the total production was used on Pennsylvania Department of Highways projects.

Or looking at it another way, the U.S. Department of Mines estimates that the 1959 production of 61 million barrels of cement provided 16,200,000 man hours of work.

From the unemployment-economic standpoint: there are 23 major unemployment areas in the United States and its possessions identified as group D—with 6 to 8.9 percent unemployment.

Three of these are located in Pennsylvania and three in adjacent States.

Actually over half of the major labor areas of Pennsylvania are classified as "areas of substantial unemployment" as determined by the U.S. Labor Department—with the mid-January figure of unemployment being 8.2 percent.

Item. Steel and cement producing areas are either in areas of substantial unemployment or adjacent to such areas.

Whether Pennsylvania is destined to subsidize foreign countries, their imports and their products at the expense of Pennsylvania's economy and unemployment is worth looking into.

AMERICA PAYS THE BILL, EUROPE GETS THE ORDERS

Mason Denison, Harrisburg News Bureau representative files his second article upon the contracting for the steel, cement and other materials needed for the building of the giant Federal highway system.

The first article was published yesterday. Both of them should be read with interest, and possibly some alarm, by Americans. Stripped of superfluous verbiage, the two articles set out that where foreign companies underbid American companies for the materials, the orders will go to foreign nations.

The gimmick in the specifications for the orders for materials is found in the following paragraph of the U.S. Bureau of Public Roads directive.

"Restrictions upon the use of nondomestic construction material predicated upon the State's estimated cost or anticipated difficulty of making analyses, tests or inspections at the place of manufacture shall not be approved by the Bureau of Public Roads" unless the individual highway departments find and determine, in effect, that conditions are not being met at place of foreign manufacture.

Preceding this paragraph is one which, boiled to its essence, provides that 6 percent shall be added to foreign bids, and if the total bid is less than a U.S. bid, and the materials are of acceptable quality, the foreign company gets the bid.

Provision is made for inspection of the materials which would mean that if Pennsylvania were letting contracts for steel and cement, inspectors would have to be sent to the foreign nations to make the inspections, at the expense of Pennsylvania or what other State was building the highways.

What this all means in effect is, that part of the increased payrolls promised for American industry when the Federal road program was adopted, will be lost.

Pennsylvania particularly will be especially hard hit if such a program goes through. In this Commonwealth we have giant steel mills and cement mills. Pennsylvania is the leading State of the Union producing cement.

When Congress passed the additional 1 percent per gallon tax upon gasoline to be earmarked for the $40 billion roadbuilding program, estimates were made as to the millions of tons of steel and cement which would be needed. There are other materials but steel and cement are the basic materials.

These millions of tons of steel and cement were transmuted into hours of labor which it was assumed were intended to affect American workers.

But the U.S. Bureau of Public Roads seems to have other ideas.

This directive was issued back in December of 1959 but has just come to light. The Pennsylvania Department of Highways has protested the directive but to no avail as yet. It seems to be a matter upon which the Congress could well take some action.

The 6 percent which will be added to foreign bids means little or nothing. Belgium can produce cement far cheaper than the United States. Britain and Germany can produce steel far cheaper than the United States.

There is no use suggesting that foreign-made products are inferior to those made in the United States. It just isn't so, especially in such basic materials as steel and cement.

Most of the foreign countries today are equipped with the most modern tools it is possible to procure. American money paid for much of them. They have learned the lesson of mass production in Europe and in many cases, particularly machine tools, foreign countries in some cases have equipment superior to ours.

This idea of the Bureau of Public Roads may be based upon the theory of aid to foreign nations. Up to a certain point this is proper and logical, but when that aid robs American workers of jobs and payrolls, it wouldn't be a bad idea to take a look around home for some aid.

The situation also points up in tragic fashion a statement that has been made many times in the past 5 years, that we in America are pricing ourselves out of the foreign market. In this case we seem to have priced ourselves out of the domestic market.

Warnings have been heard time and again of the inherent dangers in the constant increase in the cost of production of American articles. Labor and management have been urged to hold the line in prices but to little avail.

The Bureau of Public Roads has provided a dramatic answer.

This present situation points the issue up more because the money to pay for the steel and cement, if purchased in foreign nations would come from the pockets of American workers. In other words they would be taxed to provide the knife to cut their own throats.

But while any protests against government orders going to foreign nations might bring a Federal embargo upon steel and cement

for highways, it certainly would not affect private purchasers.

Today the eastern ports are busy unloading merchandise of all kinds, made in Europe.

A purchaser needing a large order of barbed wire will find that barbed wire is being laid down on the Cleveland docks at many dollars per ton cheaper than it can be manufactured in Cleveland.

Automobiles, dress goods, toys, chinaware, glassware, you name it and a foreign country can deliver it.

If labor and management needed any example of what the rising cost of production means to the American worker they have it in the case of the Federal highway program.

The end result would be that American workers would be riding in foreign-made cars, over highways made of foreign materials. About the only American stake in the whole thing would be the money these things cost.

This Beats All

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. SMITH of Kansas. Mr. Speaker, the fallacious doctrine of appeasement was never more evident than in regard to the reprieve of the convicted kidnaper and rapist Chessman. The telegram from the Assistant Secretary of State to the Governor of California—based on the complaint of a far-off country in South America, Uruguay—seems almost like a fictitious character out of a dime store paperback novel, yet it happened.

Here is appended an editorial from midcontinent America that clearly indicates what many Americans deeply feel. To have this reprieve of a criminal convicted of a dozen serious crimes dictated by a people who always are boasting of their hatred and contempt of the "Colossus of the North" is almost unbelievable. It seems clearly evident that sparrows are beginning to sit in nests formerly occupied by eagles.

Here is mid-America speaking in the Hays (Kans.) Daily News:

THIS BEATS ALL

In all the history of American jurisprudence nothing has been seen to equal the gruesome comedy of justice that has witnessed Caryl Chessman elude execution eight times in 12 years. Whether or not the sadistic mugger who was responsible for the death of one woman and mental derangement of another, plus sexual assaults upon others, should die at the hands of the law is not for us to say. But the California courts thought so, and so decreed. Since then politics and emotions have so overshadowed his crime, convictions, and sentence that the facts of the case have become secondary, if not forgotten.

The events of Friday make it sadly laughable. Over the years about every society and organization from the death row chanters to the organized matrons for humane treatment of criminals to the local parchesi club has plead for or against the terror marked for legal death. But meddling hit an all-time high, or low, with the State Department nosing into the matter, asking for gubernatorial clemency almost before the ink was dry on the State's supreme court decision that the original penalty was irrevocable.

It is doubtful if any criminal has ever had his case more thoroughly and consistently reviewed than Chessman. Justice worked overtime for him. And then, on the most cockeyed excuse to ever tip the scales of an American court, the Governor of California acceded to a State Department notion. At its request Chessman escaped execution, not because of points of law involved, but because the Department in Washington feared that for the decision of a duly constituted American court to be carried out would cause presidential embarrassment on Eisenhower's contemplated trip to South America.

This, to say the least, takes the cake for sure. If the time has arrived that penalties prescribed by duly constituted courts, arrived at by due process of law, must be altered for the convenience of the Federal Government, then the time has come to overhaul the law and let the Federal departments and bureaucracies supplant our constitutionally guaranteed right to be tried by our peers. Even the idea of government busybodies interfering in any way with the carrying out of justice as decreed by the courts is not only a travesty on justice, it is un-American.

Begins at Home

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. WALLHAUSER. Mr. Speaker, I believe that the President has made important recommendations with regard to the solution of the water pollution problem and additional Federal aid for it in his veto message of H.R. 3610, the Water Pollution Control Act.

I am particularly impressed by an editorial that appeared in the Newark (N.J.) Evening News, under date of February 26, which I would commend to my colleagues for their attention:

BEGINS AT HOME

Having permitted their streams to become polluted, it is now primarily up to the municipalities to stop the pollution. This, less bluntly stated, is President Eisenhower's reason for rejecting a bill greatly increasing Federal grants for the construction of sewage treatment plants. Against the force of his arguments the House could not rally enough votes to override his veto.

The President agrees with Congress that the Nation's rivers and streams are a national asset, and he concedes the need for Federal intervention where pollution has an interstate origin. But the proper role of the Federal Government is to stimulate State and local action, the President continued, not to "tempt municipalities to delay essential water-pollution abatement efforts while they waited for Federal funds."

Important progress has been achieved without Federal help. A notable example is the Passaic River Valley where, through a commission created by the State, a score of municipalities have financed construction of a sanitary sewer that has greatly reduced river pollution. Similarly the Raritan will be cleansed by a tricounty trunk sewer, to be paid for by the beneficiaries.

From 1948 to 1958 more than $278 million was spent by New Jersey municipalities and industries for sewage treatment plants. Every New Jersey community in the Delaware Basin now has a modern sewage-disposal facility. In the New York metropolitan area, under the leadership of the Interstate Sanitation Commission, stream pollution is gradually being reduced by municipal efforts.

There are many areas in which substantial Federal assistance to States and municipalities can be justified, but in so elementary a service as sanitation most or all of the responsibility is clearly local. Especially since it is demonstrable that the localities can do a pretty good job on their own.

Nixon Campaign Tactics

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. HOSMER. Mr. Speaker, last Friday's Long Beach Press-Telegram carried a remarkable article by Columnist Virginia Kelly discussing Vice President NIXON'S campaign techniques. Few statesmen in our Nation's history have had the vast knowledge and steady courage to adopt these techniques described as follows:

VICE PRESIDENT DEVELOPING DIALOG AS CAMPAIGN METHOD

(By Virginia Kelly)

Vice President NIXON has developed a campaign technique new to the modern world but which was recognized by Socrates as an ideal way of exchanging views.

Instead of making a formal campaign speech, Mr. NIXON, more and more, is adopting the 5-minute speech followed by a question and answer period. He used this procedure several times in California recently.

His listeners responded enthusiastically and asked questions on a wide range of subjects. For example, one woman asked why her tax deductions for her six children had not been increased in a ratio to the increased cost of living.

Many persons have asked questions about Mr. NIXON'S plans for national defense, if he is elected. He has answered that defense would receive his complete consideration and that the budget will not be an overriding consideration.

The Vice President is at his best in these informal exchanges. His manner is quietly friendly, and his listeners are visiby impressed that their questions receive his consideration.

Mr. NIXON'S advisers assert that he is the only candidate who has the necessary background, experience, and knowledge to risk these frank exchanges.

From the Vice President's viewpoint, he is finding out at firsthand, as no pollster could reveal, the issues which the American people consider most important.

In another unusual aspect, certainly not followed by most candidates, Mr. NIXON continues to write his own speeches which are short and full of punch. Reporters have long been weary of interminable speeches. The public seems to be of the same mind.

One of the major weaknesses of the highly intelligent Senator HUMPHREY is that he talks too long. Vice President NIXON'S short speech and questions and answers should help the NIXON campaign and should relieve the listener of dreadful boredom.

Disarmament Pact Without Good Faith

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. William Henry Chamberlin points out very clearly and in a layman's language the many snares and pitfalls that we can fall into in our eagerness to outlaw atomic weapons.

All of us, all over the world, long for an end to this terrible threat that overshadows our civilization. But in our great longing for peace let us never forget that just as it takes two to make a quarrel, it is even more true that it takes two to make peace.

The article follows:

DISARMAMENT PACT WITHOUT GOOD FAITH

(By William Henry Chamberlin)

It is one of the tragic ironies of our age that, just when the case for eliminating war and the weapons of mass destruction is strongest, the difficulties of achieving a reliable control of arms limitation are most formidable. No reasonable person would dissent from the proposition that a war fought with thermonuclear weapons would almost certainly be one of the greatest disasters in the history of the human race.

But the very scientific progress that makes war potentially so horrible raises very difficult roadblocks in the way of effective international inspection and control. Two years ago Dr. Edward Teller, a great nuclear physicist with a first-rate political mind (an unusual combination), presented the obstacles to effective control in this lucid and convincing statement:

"Modern warmaking potential depends to an increasing degree on highly specialized weapons. Some of the most essential of these weapons can be hidden with relative ease. Nuclear explosives and long-range rockets are two outstanding examples. Thus surveillance becomes more and more difficult. In addition, scientific and technical developments have produced and will produce unexpected types of weapons. How shall we check whether such weapons exist when the person who does the checking does not even know what he is looking for? We have most correctly emphasized that no disarmament scheme is acceptable unless the application of it can be verified. Few things are impossible; but it may actually be impossible to verify disarmament in the Soviet Union. The game is strongly weighted against us and the very rules are changing too fast."

Every American, every citizen of a free country, should ponder carefully this reasoned statement before recklessly signing an emotional "Ban the Bomb" declaration or promoting a Western-Soviet convention on arms limitation that falls short of airtight elements of self-enforcement.

Agreed limitation of armaments would have been fairly simple in a time when warfare was less complex. It would have been feasible to count up divisions of men under arms, to list cannon and other firearms, to conduct a census of warships. But under modern conditions how is it possible to know how much fissionable material might be held back secretly, if there were an agreement to turn over all such material for peaceful uses?

And without a minute inspection that would be resented in the United States, that would almost certainly be rejected out of hand by the Soviet Union, how could there be any assurance that some laboratory ostensibly devoted to peaceful research was not working on some new weapon that might upset the entire balance of power? The free societies of the West are at a tremendous disadvantage in trying to work out a mutual system of controlled disarmament with the closed society of the Soviet Union.

One element in this disadvantage is that vocal pressure groups in the West are constantly pressing their governments to go well beyond the bounds of prudence in making concessions to the Soviet viewpoint, which has always been to permit as little outside inspection of Soviet military installations as possible. There is no corresponding pressure on the Soviet side. One doesn't find advertisements in Izvestia or Pravda, urging concessions to the Western position in the Geneva talks. Nor do "Ban the Bomb" enthusiasts gather around Soviet nuclear stations and stage noisy demonstrations. Soviet scientists do not stir up the feelings of the Soviet public with hair-raising images of clocks pointing very close to midnight in the history of the human race. Nor are there Soviet novels and films of the "On the Beach" variety.

Should a disarmament convention of some kind be concluded, there are two strong reasons for believing that it would be observed by the United States, while it could, and most probably would, be violated by the Soviet Union. First, there are pacifist and pro-Soviet groups in this country which would quickly pounce on any suspicion that American military authorities were engaged in forbidden activities. There would be nothing of the kind in the Soviet Union. Second, the geographical possibility of hiding away an important secret installation would be infinitely greater in the vast reaches of the Soviet Union or in Red China than in the generally accessible United States.

A far-reaching arms limitation treaty which the United States would keep and the Soviet Union could evade would be the deadliest trap into which the free world could walk. If there are tangible reductions in Soviet military preparation which can be conclusively verified, these should figure in our own estimates of military need. But in disarmament, as in everything else, a long experience of Soviet bad faith should make us steer clear of any commitments which are not 100 percent verifiable and self-enforcing. The conclusion of such a treaty would rank as our supreme national blunder. It is doubtful whether we would ever have the opportunity to make another.

Legion of Guardsmen

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. RODINO. Mr. Speaker, I have today introduced a bill, identical to one already introduced by Mr. GROSS, to incorporate the Legion of Guardsmen. The legion is a national veterans' organization with a record of outstanding service and accomplishment. Their efforts on behalf of the veteran, and on behalf of numerous worthy causes, are well known throughout the country, and they clearly deserve the recognition of a national charter. The purposes of the legion are: First, to perpetuate the friendship and associations of persons having served in the Armed Forces of the United States; second, to obtain recognition for its members for military services rendered; third, to foster and promote governmental legislation for the betterment of its members and for the welfare of the general community; and, fourth, to initiate and support ideas and to formulate plans to effect adequate national defense for the greater peace and security of our country.

This bill was introduced, but unfortunately was not passed, in the last Congress. I am most hopeful that we will meet with more success this session.

Telephone and Telegraph Excise Tax Repeal Must Be Maintained

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. McGOVERN. Mr. Speaker, this Congress should reject the administration proposal to continue excise taxes on telephone and telegraph service. As one of the cosponsors of legislation providing for the termination of this tax, effective July 1, 1960, I think it is essential that the Congress carry out the decision we reached last year.

The record clearly shows that the tax on telegraph and telephone service was rationalized in wartime as an emergency revenue measure and to discourage the use of our communications facilities. Today, neither of these reasons is any longer valid.

The South Dakota Public Utilities Commission has very clearly stated the case for repeal of the discriminatory telephone and telegraph excise tax. I ask unanimous consent to include the excellent resolution of the commission at this point in the RECORD:

At a regular session of the Public Utilities Commission of the State of South Dakota, held in its offices in the city of Pierre, the capital, this 20th day of February 1960, the following resolution was adopted:

Whereas an excise tax is levied on telephone and telegraph service by the Federal Government; and

Whereas such tax was levied during World War II as a wartime emergency tax to help pay war costs and to discourage unnecessary use of such services; and

Whereas there is no longer justification for imposing such tax for the purposes for which it was initially intended; and

Whereas telephone and telegraph are essential to the orderly transmission of information required in transaction of business and personal affairs; and

Whereas the tax imposes an undue hardship upon millions of individuals and businesses in this country, and it is discriminating in that no other public utility services are still so taxed; and

Whereas the maintenance of an adequate communications system is essential to the economic prosperity and welfare of the people of this country; and

Whereas the excise tax has been repealed effective July 1, 1960: Now, therefore be it

Resolved by the South Dakota Public Utilities Commission:

SECTION 1. That the South Dakota Public Utilities Commission does hereby petition the Congress of the United States to support the repeal and not reinstate the excise tax levied on telephone and telegraph service.

SEC. 2. That a copy of this resolution shall be furnished to each Member of the South Dakota Delegation to Congress.

FRED LINDEKUGEL,
Chairman.
C. A. MERKLE,
Vice Chairman.
C. L. "ROY" DOHERTY,
Commissioner.

Does North Dakota Face Depopulation?

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. BURDICK. Mr. Speaker, the placing of entire farms in the soil bank is having a disastrous effect on the economy of North Dakota. Not only are the effects of this program felt in the rural areas, but on the main streets of our cities and towns as well. The following resolution adopted by the Hettinger Chamber of Commerce, Hettinger, N. Dak., reveals the concern which is now being felt in the cities over the depopulation which is going on in the rural areas of North Dakota:

The following resolution was introduced and passed by the Hettinger Chamber of Commerce, Hettinger, N. Dak., on January 26, 1960:

Resolved, That the Hettinger Chamber of Commerce, Hettinger, N. Dak., opposes any extension or further expansion of the soil-bank program in its present form, for the following reasons:

1. The soil-bank program is causing the depopulation of North Dakota and our rural areas. North Dakota does not have enough industry to hold all the farmers that soil bank their farm units, therefore, they move out of the State, either permanently or seasonally.

2. The soil-bank program is causing a decrease in business and it affects every business up and down Main Street in our rural towns because business (machinery, trucks, fuel oil, labor) which normally goes with the operation of these farms is lost. This pertains to every city and town in our State.

3. The soil-bank program makes it impossible for a young man, who wishes to start farming, to acquire land for that purpose. It also prevents young farmers who need to enlarge their operations, because of increasing costs, because retiring farmers put land in soil bank rather than putting it up for sale or rent.

4. The soil-bank program is increasing the tax burden on existing farm units and businessmen because taking these units out of operation eliminates personal property, such as cattle and machinery that goes with the operation of these farm units, thereby, decreasing the assessed personal property valuation in the township, counties, and the State.

5. The soil-bank program is creating a problem for the laboring man, especially in this area where we have little industry because the farmers who put part, or all their land in soil bank and, who do not move but of the State seek, employment in towns and cities and are in competition with laboring men who have no other way to make a living and who are not in a position to seek help from the Government.

6. The soil-bank program is not good for the morale of the people to have landowners living off the Government and the remaining farmers and businessmen paying the bill.

7. The soil-bank land presents a hazard to remaining farmers in the area because of possible uncontrolled weed and insect infestation, as well as fire hazards in our low rainfall area.

8. To maintain an equitable economic standing for farmers some type of assistance is needed but the present program—cut acreage and cut price—has partially caused the increase in yields per acre by farmers, because the cost per unit produced has to be small enough so that he can still show a profit at the end of the year, and the only alternative he has had is to increase yields so he can show a profit. The increasing of yields has about reached its limits including the above average farmer.

Some Causes of Slump in National Character

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Los Angeles Times, November 16, 1959:

SOME CAUSES OF SLUMP IN NATIONAL CHARACTER

In Senator JOHN KENNEDY's recent Los Angeles speech he correctly pinpointed many of the unsavory qualities of our contemporary American character but failed to give us the cause.

"Complacency is predominant in our attitude," he says. "Where," he asks, "is the spirit, moral and physical, of our forefathers?" Indeed, where, Mr. Kennedy?

In addition, he pleads for a more Spartan type of attitude. Does he propose we go into the hills and suffer the rigors of nature to harden our bodies, or practice stoicism to temper our desires? Maybe there is another answer.

Begin by returning to us the freedom of choice, the freedom of self-responsibility. Allow us, to a degree, to sink or swim without a paternalistic Government that guarantees our future and invites us to merely float.

Permit us to reap a reward without it necessarily being 90 percent of parity. Give us the right to plan our own future, without the dictates of a special bureau, and allow us to seek the answer from our own human spirit.

Then you may find complacency replaced by courage and a moral and physical rise developed by the simple experience of probability. In short, Mr. Kennedy, return to us the element of risk.

Eliminate the insidious specter of a completely guaranteed security. Help us bequeath to our children wider horizons than the closed shop, the featherbed job, the risk-free pension and the yoke of rising taxes and a higher national debt.

Keep us busy planning our future and attending our own affairs and you may find the American spirit of our forefathers still alive in all of us.

If you regulate this flickering spirit until it dies out then our future is doomed.

F. R. BAKER,
SAN FERNANDO.

H.R. 10641

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. BERRY. Mr. Speaker, I have today introduced H.R. 10641, a bill intended to improve educational facilities for the Indian children on certain Indian reservations. In my judgment, this is one of the important pieces of legislation to be passed at this session of Congress.

The bill applies to Indian reservations having within their boundaries land purchased by the Federal Government during the drought years of the thirties and which have been termed submarginal lands and by Executive order have been under the jurisdiction of the Secretary of the Interior for administrative purposes during the past 20-odd years.

It provides that on such reservations where the county or local school districts have assumed the obligation of education of the Indian children, along with the obligation of education of the non-Indian children, that such county school districts or local school districts shall have the additional inducement of the rental money which is received from such submarginal lands, such rental moneys to be paid to such school districts in lieu of normal tax revenues from such real property.

The bill provides that the Secretary of the Interior shall execute a lease contract with the Commissioner of School and Public Lands of the State in which such reservation is located, and that the Commissioner in turn shall sublease the lands to Indian or non-Indian ranchers, and that the revenue therefrom shall be paid to the districts wherein such land is situated, which districts are assuming the obligation of education of the Indian children.

The purpose of this legislation is twofold: First, it compensates the school district, and the taxpayers of that school district, for their diligence in providing public educational facilities for the Indian children. There is no question in my mind, and I believe no question in the mind of anyone but that the Indian children obtain a better education in public schools attended by Indians and non-Indian children alike than they do in the Government-maintained and Government-operated, segregated Indian schools.

Second, this bill, if passed, would serve as a great inducement for counties and school districts situated within the outer borders of an Indian reservation, having submarginal lands within its area, to do a better job of improving the school facilities and do a better job of providing educational facilities for the Indian, as well as non-Indian students.

In my judgment, Mr. Speaker, there is only one solution to the so-called Indian problem and that is education. This bill is a step toward improving those educational facilities.

There is another phase I wish to mention. In school districts such as the Todd County School District in my State, which embraces the entire unorganized county, the school system is handled under a county board. This county has gone a long way in taking over the educational facilities on the entire reservation. The only school in the county that is not completely integrated is the Government school situated at the Agency headquarters in Rosebud. The county high school, located at Mission, is completely integrated with more than 50 percent of the students coming from Indian homes. It is an example of what can be accomplished.

The Government, of course, makes payment to the Todd County School District through a Johnson-O'Malley contract or through Public Law 874, but these payments do not compensate the school district for the cost of operating the school for these Indian children. The additional revenue arising from the leases on this submarginal land would go a long way toward filling the gap of compensating the school district for the cost to the taxpayers of this additional educational burden.

When these lands were originally purchased by the Federal Government and taken off the tax rolls, it was stated at the time that this land was being purchased for the benefit of the Indian people. There is no way, Mr. Speaker, that the Indian people can be more fully and completely benefited than by the use of the revenues from these lands to help pay the cost of the education of their children.

This bill has the support of the taxpaying public in these counties, and it has the support of the thinking Indian people who believe in better education for the Indian children and who believe in improving their circumstances through the better education, and the integrated education, of their children.

The Wealth of Illinois

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I would like to insert an editorial from the Peoria Journal Star of February 23, 1960:

THE WEALTH OF ILLINOIS

Illinois is a wealthy industrial State, but it also is one of the richest diversified farming areas in the world.

The farm wealth of this State is revealed in a recent study made by the United States and Illinois departments of agriculture. The total value of the corn crop in Illinois last year was $727 million, and the total value of livestock in the State on farms January 1, 1960, was $726 million. Interestingly enough, the industrial wealth of the State can be seen in a comparison with these figures. Caterpillar Tractor Co. had gross sales for the year totaling $742 million.

Illinois ranks first in the growing of soybeans, second in corn and hogs and is important in the production of oats, wheat, cattle, sheep, poultry, dairy products, and fruits and vegetables.

Illinois has 7 of the 10 leading corn counties of the United States, with McLean ranking first in the Nation. It has 6 of the 10 leading soybean counties, with Champaign first, and it has 2 of the 10 leading hog counties, with Henry in first place.

This State and her immediate neighbors make up the American Corn Belt and thus contribute significantly to the Nation's food supply. Illinois' 10 million people live in a rich State, both industrially and agriculturally.

U.S. Day Thoughts

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. HIESTAND. Mr. Speaker, the newspaper article of Columnist George Todt in the San Fernando Valley Times of October 23, 1959, won for Mr. Todt a Freedom Foundation George Washington Honor Medal. Announcement was made on Washington's Birthday, February 22, at Valley Forge, Pa., during the ceremonies commemorating the 228th birthday of the Nation's first President.

In my opinion, the article certainly merits reprinting in the CONGRESSIONAL RECORD, and under unanimous consent I include it, for it is, indeed, a classic:

U.S. DAY THOUGHTS

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all."—American pledge of allegiance.

A lot of practical, down-to-earth citizens are celebrating U.S. Day throughout our Nation today and it seems like a good idea from this corner.

Starry-eyed dreamers to the contrary, the world's mightiest fortress of freedom is right here in the American Republic—just as it always has been since the day the Founding Fathers designed this country of ours to become the most nearly libertarian government the earth has yet seen or known in practice.

The planet's highest standard of living and the greatest amount of free agency for mankind in all its history has been produced by the American dream, and it is something of which we all should feel proud. But do we?

Those who do not love America ought to go somewhere else to live and there demonstrate their loyalty to the country of their choice. They are free to travel and there is no iron curtain over the Passport Division of the Department of State—except for fifth column Communists.

The overwhelming majority of the solid, patriotic citizenry of this Nation would never miss the ill-assorted bevy of creeps whose most identifying characteristic is an inordinate ability to bite the hand which has fed them so well in the past.

Just as we admire the quality of loyalty in a human being, so must we despise the other side of the coin—which is ingratitude.

No people who ever lived in this mundane existence have had more to be grateful for than the citizens of our Republic.

The most profound students of history will search in vain for a system of government so truly liberal and progressive—in the original meaning of those terms as expressed by our Founding Fathers almost 200 years ago—as that provided by the United States of America.

We do not pretend to perfection by any manner of means, but surely there has never been another nation, now or in the past, which provided such copious draughts of human freedom to its citizens as has ours here on the North American Continent.

Speaking philosophically the American Republic has been something akin to a modern temple of liberty and the beckoning torch of mankind's aspirations to rise from the dust of bondage throughout the world to a place of individual dignity, justice and worth.

And that torch of which I now speak has attracted more than 50 millions of foreign peoples, mainly Europeans, to our shores in previous times to participate with us in the blessings of citizenship and freedom, American style. This is the proof of the pudding.

For those immigrants of ours in past generations came here seeking riches of the spirit and the mind, not of the purse. At least most of them did. And in the process of the Nation's development, many of such entrepreneurs in human freedom amassed great fortunes along the way.

Undoubtedly they did so because of the unique incentive system of free enterprise with which this Nation was parlayed from a tiny seaboard federation of States numbering 3 millions of souls into the most powerful nation on earth in less than two centuries of time.

Ours has been an amazing sage of industrial development, political freedom and fateful destiny. Where will it end? What will the future hold for us? Who can tell?

Of one thing we all may feel quite certain; to the true liberal who prides himself on progressive developments for humanity, there is nothing so important to the equation as the ingredient of individual liberty and what we have sometimes called the God-given free agency of man.

More than any other nation yet produced on the face of the earth—anytime, anyplace or anywhere—the Republic of the United States has done more to exemplify such a concept in the minds and hearts of human beings everywhere than any other of her contemporaries, past or present, on the world stage.

Ours is truly a temple of liberty to every human soul that stands universally for freedom from bondage and tyranny.

We must never allow alien ideologies to pull down the pillars which support this temple of liberty.

Let us remember that man's noblest trait which separates him from barbarian and beast alike is his loyalty—loyalty to family, loyalty to country and loyalty to God.

Yes; today is U.S. Day and let's not forget to hang out the flag, if we have one at home or our place of business.

Let's be proud of our loyalty to our country and give her the unselfish love and respect which she so richly deserves. Can do?

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. MICHEL. Mr. Speaker, before long we will be considering on the floor of the House some form of Federal aid to education bill, and while I personally have consistently opposed any Federal aid to education scheme, believing that in this area we have a State and local responsibility, there is seldom as high ranking an educator as our own superintendent of public schools and a member of the NEA who will go on record as being similarly so opposed.

Dr. Mark W. Bills, superintendent of our Peoria public schools, has done an outstanding job in improving the curriculum in our public school system and spurring our citizens on in our new and renovating construction program to the point where we are meeting the need. True, it called for an increase in taxes locally, but this is where the responsibility rests. It seems to me that our educators throughout the country ought to be directing their efforts toward influencing and convincing the communities in which they live that the answer to our education problem cannot be solved in Washington, but right at home.

Educators generally are articulate and well informed. When Superintendent Mark Bills and his associates presented the problem to not only our school board but to the public generally in clear, concise and ungarbled language, the community responded by favorable referendum. I see no reason why every community in the United States with its energies and resources properly channeled under wise leadership such as that exemplified by Dr. Mark Bills cannot produce the same results.

Mr. Speaker, I should like printed at this point in the RECORD the full text of Dr. Mark Bill's letter, together with the portion of the bulletin to which he alludes entitled "Applications for Participation in Title III, NDEA."

PEORIA PUBLIC SCHOOLS,
Peoria, Ill., February 23, 1960.

Hon. ROBERT H. MICHEL,
House of Representatives,
Washington, D.C.

DEAR BOB: The gravity of the issue and my deep personal interest prompt me to reaffirm thoughts related to Federal aid for elementary and secondary public schools. This is the second communication I have ever sent to any public official during my entire lifetime. Hence, I am neither a chronic nor regular letter writer.

First of all, State and local control over schools and educational programs is fundamental in our heritage. In my judgment, no circumstances, nationally or internationally warrant discarding that principle under the guise of "defense." Hence, I believe that the principle itself is not only a basic part of our heritage, but that it is uniquely essential to democracy.

Secondly, the needs have been grossly exaggerated. Using very debatable yardsticks or standards for buildings and classrooms, the NEA spokesmen and other proponents of Federal aid have presented needs that cannot be honestly justified. Hundreds of buildings and classrooms rated as inadequate or unfit can be rehabilitated. Other hundreds were being modernized, even as the data were finalized. So, the standards or yardsticks are arbitrary and full of padding.

Thirdly, it is vitally important to point out that the educator-proponents for Federal aid, are the same leaders who are responsible for philosophies and programs now cited as needing relief, repair, strengthening. In short, the very leaders who sold American education the philosophies and programs responsible for our weaknesses are now seeking Federal aid to bail them out.

The real renaissance in American education is coming from lay boards of education, a few dedicated administrators, and some university quarters. The professional educational organizations have not yet officially espoused any basic program changes. Their only answers are more money for buildings, teachers' salaries, and a patchwork of repair work. The profession and its spokesmen have not yet offered any fundamental changes in institutional philosophy or program presentation. Those proposals have come from other sources.

The following quotation from Time, February 15, 1960 (p. 23), is pertinent: "Federal grants might help to raise salaries and speed classroom construction in lagging areas of the United States, but essentially the problem is one that faraway Washington is incapable of solving."

Program changes, new buildings, consolidations are taking place all over the Nation. I have been in education 35 years, and I have never witnessed such activity in schools. Local communities, local administrators, citizens and their boards are changing programs at an amazing rate, and doing it competently, too. The last thing they need is a master plan, a patchwork job, costly supervision.

The country is getting busy about education. Students are more serious. Standards are being raised. More and better candidates for teaching are enrolled in our colleges and universities. The change is taking place.

In the fourth place, Federal controls are inevitable with Federal aid. If there be any doubt, take a look at what is happening in Illinois. Additions to the staff of the Illinois State Department of Public Instruction, just to administer the NDEA, are beyond all reason. Many of these consultants cannot "carry water" for the personnel or systems they are assigned to supervise.

Qualifying conditions are built into the act and constitute ridiculous conditions, even when aid is sought. In a neighboring school, a language laboratory equipped with NDEA and local funds can be used only for modern foreign languages and stands idle when it could be used for speech, Latin, etc. But not under NDEA provisions. The enclosed bulletin from the office of our Peoria County Superintendent of Schools is typical. Note, the county superintendent is the agent of the State department and cannot be blamed in any way. He is only carrying out orders. It is important to point out the fact that within the profession of education there is a very large group that is vigorously opposed to Federal aid under any plan offered to date. Members of this group, like myself, can speak only as individuals against the heavily subsidized and organized front for the NEA and others. Nevertheless, this is a large group, notwithstanding the difficulties of being articulate.

The privilege of offering criticism calls for some constructive suggestions. Here are some thoughts which I should like to offer:

1. Enlist the power and influence of all agencies and news media to alert the Nation to the need for improvements in education. This is the democratic way, and I believe that the response will be better—in the long run—than any hasty, emergency, centralized plan. This would call for a saturation interpretation appeal, like bond drives, etc.

2. Call together representative laymen and carefully selected professional educators to draft desirable standards for: (a) elementary and secondary programs; (b) college-university programs; and (c) teacher-training.

This would be an attempt to develop standards without Federal controls. The influence of the Federal Government would be used to support State, local, and institutional leadership.

3. Aid could be given to bona fide hardship areas on temporary plans with the emphasis upon developing self-sufficient resources.

4. Aid for graduate students who have established their ability and motivations is one of the most attractive items.

Suggestion No. 2 is the most important. If these meetings were to be controlled by educators the outcomes would be of little value. There must be some real changes in philosophy, methods, and programs, if any real voluntary gains are to result.

Sincerely,

MARK W. BILLS,
Superintendent.

APPLICATIONS FOR PARTICIPATION IN TITLE III, NDEA

Schools desiring to participate in title III of the NDEA who were not represented at the informational meeting held at Galesburg on February 1 will need to write to Mr. Chesko at Springfield for the necessary application blanks.

When an application is ready to be submitted, the district must notify Mr. Chesko and request that its school(s) should be put on the list for a consultant to visit. The application is not to be submitted until a consultant has visited your school(s) and evaluated your program.

Mr. Chesko must be notified by April 15 that you will submit an application. Otherwise, it will be assumed that you will not participate.

In order to assist you in determining whether or not your school(s) should participate, we are enclosing a sheet giving criteria for priority of consideration of applications, title III, and two sheets showing the ratio for reimbursement for allowable programs. This ratio is the same for all three areas included under title III.

If you have not received a copy of the "Purchase Guide" for programs in science, mathematics, and modern foreign languages and would like to have one, we have a limited number of copies left at the office.

Foreign Submarines

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call attention to the article which appeared in Time magazine of February 22, 1960, regarding unidentified foreign submarines in Argentine waters. I call attention to this article because of my previous remarks on the subject of Soviet submarines and bases therefor:

ARGENTINA—THE PING IN GOLFO NUEVO

Unidentified foreign submarines tend to show up in Argentine waters about the same time as naval appropriations bills show up in Congress. Two years ago, the Argentine Navy made brief contact with what it said was a sub in desolate Golfo Nuevo, 650 miles southwest of Buenos Aires, and a month later got to buy an aircraft carrier; last year it sighted another elusive submarine, got enough money from Congress to buy planes. Last week, as Navy Secretary Rear Adm. Gaston Clement was doing fiscal battle with economy-minded Economics Minister Alvaro Alsogaray, a submarine—or something—was again roiling the waters of Golfo Nuevo.

Newspapers, including Buenos Aires' Clarin, genially kidded the government about the sub for a while. But as more than 30 planes and a dozen warships flailed Golfo Nuevo to foam with showers of depth charges, as troops in full battle dress moved up to the bleak Patagonian shoreline, as the Puerto Madryn air and naval base at the gulf's head went on a war footing, as U.S. planes rushed emergency equipment to the scene, the skeptics stopped in midsnicker. Most important of all, President Arturo Frondizi took it seriously, and presumably the navy would not dare to mislead him.

Blackout: The intruder was first sighted, at midmorning 3 weeks ago, by a sonar operator during a training-patrol mission of three destroyers. The sonar's ping indicated a solid object moving slowly 90 feet below the surface of the 30- by 40-mile Golfo Nuevo. The sonar target outsped the attacking destroyers, and out went a call for planes. A few hours later, a Neptune anti-sub plane reported spotting a submarine; ships and planes attacked, but the target disappeared.

The Navy declared Golfo Nuevo a war area, out of bounds to airliners and ships, and blacked out the Puerto Madryn base. It sent intelligence agents on house-to-house searches ashore, put three destroyers, 18 warplanes, and some helicopters to patrolling the gulf itself, and lined up five warships at the 7-mile entrance, where the depth is only 60 feet. For top security, ships communicated with one another in the Guarani Indian dialect, spoken by Paraguayan naval cadets aboard the Argentine vessels for training.

Five days later, sonar operators made the second hard contact, but an attack only sent the intruder to 420 feet, well beyond the 300-foot range of the Argentine depth charges. On the eighth day, radar spotted a sub, or its snorkel, above the surface. The target dived to 540 feet, but the pursuers heard a sound like hammering for the next 2 days, possibly indicating damage being repaired.

U.S. help: The Argentine Navy Ministry called in the U.S. Naval attaché; he sent his assistant to the scene. Hours after the assistant returned, U.S. Ambassador Willard Beaulac was closeted with President Frondizi. Next day, Washington announced that it had sold Buenos Aires $25,000 worth of electronic equipment, aircraft flares, depth charges; and two well-loaded Globemasters took off for Argentina.

At week's end, the Argentine navy officially announced that a "second unidentified submarine" had moved into Golfo Nuevo "with the apparent purpose of helping" its trapped and crippled sister.

There was not a scintilla of hard evidence to indicate what a submarine would be doing prowling around the desolate Patagonian coast or to suggest its nationality, except that the U.S. and British Ambassadors promptly disclaimed ownership. Sonar can confuse submarines with whales, old wrecks, even undersea prominences. Most of the world still waited for the Argentine navy to produce a real-life submarine. If it does, the reward may be the biggest appropriations yet.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. LANGEN. Mr. Speaker, because of the significance of the rural electrification program to rural America, I call the attention of this body to the address of my colleague, the Honorable H. CARL ANDERSEN, of Minnesota, before the 18th annual meeting of the National Rural Electric Cooperative Association in St. Louis on February 22 of this year.

The address follows:

THE ECONOMIC VALUE OF REA

(Address of Hon. H. CARL ANDERSEN, of Minnesota, before the 18th annual meeting of the National Rural Electric Cooperative Association, St. Louis, Mo., February 22, 1960)

Having served more or less as your banker for 17 of the 25 years REA has been in existence, it is only natural that I would concern myself with the economics of your program. As a member of the Agriculture Appropriations Subcommittee since 1943, it has been my privilege to give my stamp of approval and my legislative support to 90 percent of the $3½ billion advanced to REA borrowers in the last 25 years. In 1947–48 when I was acting chairman of the subcommittee we brought out and passed the largest REA loan authorization in history, a total of $800 million. Coming from a Minnesota farm direct to Congress was sufficient reason to become one of your active supporters.

I cite these figures as a premise to a statement I want to make to you. In my considered judgment, from a purely economic standpoint, I know of no categorical use of public funds during my 22 years in Congress that has been more beneficial and more worthwhile to our Nation and to our people than our program of loans to REA cooperatives. In the next few minutes I shall lay before you facts and figures to sustain that conclusion.

It is unfortunately true that the REA program has been publicly maligned, abused, misrepresented, and distorted throughout the last quarter of a century and the attack grows in intensity by the day. To compound this felony of slander and defamation, some of the most pointed attacks have originated with people who know better. And if that were not enough, collateral beneficiaries of this very program have joined in the clamor.

Let me illustrate. This is a very painful time of year for people who are faced with the burden of making up income tax returns and finding the money to pay what they owe. One of these tormented citizens sits down to compile his report and as he adds up his dividends from the private power company in which he owns stock he is reminded of the advertisements he has read condemning the so-called giveaways of REA and related programs. He is convinced that elimination of such programs will boom his dividends, slash his income tax liability, and save us from socialism. He not only believes that, but he fires off a letter to his Congressman demanding action. Fortunately, however, Congress has not been swayed by his mistaken analysis.

Now let us look fairly and squarely at the whole economic picture. In the last 10 years, REA cooperatives have bought more than half a billion dollars worth of electrical energy from power companies. Think of that—a $500 million market for the private power companies created by the REA program, and the figure is rising to the point where it will probably hit a $100 million a year in the near future. We haven't robbed them of a market—we've given them one.

Our indignant complainant may also own some stock in General Electric, or Westinghouse, or RCA, or any of the other numerous firms in the electrical appliance and electronics business. Let us briefly review the economic worth of our REA program to these companies and corporations. Studies made early in 1957 on 10 REA-financed systems indicated that for each dollar of REA loan funds drawn down, farm consumers receiving energy through these loans had invested in electrical equipment, appliances, and wiring an average of $4.04. These studies found that farmers served by REA cooperatives invested an average of $2,572 per farm in farmstead wiring, electrical home appliances, farm equipment and such. In other words, we have created a new market with private industry for appliances and equipment at the rate of $4 for every $1 loaned or a grand total of at least $14 billion. In addition, there will be a replacement market of over $1 billion a year, and you can add to this the additional market for new developments in the electrical and electronics fields. As you can see, that indignant citizen certainly has nothing to be indignant about.

Before I came to Congress, you could practically count the electrical appliance dealers in my district on the fingers of your two hands. Today, in those 19 rural counties, there are literally hundreds of small businessmen handling partial or complete lines of such equipment. By the creation of this new market for manufactured goods we opened up small business opportunities all over the land. A good many ex-servicemen today have businesses as a result of what REA has done for rural America.

The critics of our rural electrification program have failed completely in their frontal assaults. The combined efforts of your association and your stalwart friends in the Congress have created a defense which has stood the test, but our critics are men of imagination, and they have refined their attack. In recent years they have tried to close out the Government program and send you to the private money market for your loans, and they have launched a tremendous campaign to raise the interest rates.

As a word of warning, I urge that you not take lightly these proposals. Inflationary forces and a tightening money market have led to a rising spiral of interest rates over which our Government has little or no control, and to those not intimately acquainted with the REA loan program the proposed changes are most appealing. This is one of the most serious threats to both the REA and RTA loan programs in many years, and we can do well to counsel upon it.

You should know that my subcommittee has stood firm on this issue, and any compliment you pay us must be shared by our able chairman, Congressman JAMIE WHITTEN, of Mississippi, and the other members of the subcommittee. We have been united on this issue. In recent hearings we have repeatedly told witnesses from the Department of Agriculture that we would not entertain any substantive changes in the REA loan program. And we went one important step beyond that when we told the Department officially that none of the appropriated funds were to be used to even study the question. Although I cannot speak today for all of the Members of the subcommittee, I can speak for myself and I say flatly and unequivocally that I see no reason to change the REA loan program or the rate of interest on the loans.

Two years ago, believe it or not, the proposal was actually made to my subcommittee that future REA loans be obtained from the private money market at a cost of at least 5 percent to the cooperatives. It was also proposed that these lenders be given a first mortgage on REA assets, and we pointed out to the gentlemen from the Department

that this proposal would, in a period of depression, literally turn REA as we know it over to the private companies and their financiers. We shot this trial balloon down before it even got off the ground.

Since I believe we have stopped for the time being this effort to destroy the REA loan program, I will not go into any detailed discussion of the proposal to send you into the private money market for your loans. However, I do want to set the record straight on the interest rate question.

The 2 percent interest rate is not nearly so shocking when you bring to light the fact that the civil service retirement fund has about $9 billion invested in special Treasury issues at an average rate of 2.58 percent. The Federal old-age and survivors insurance trust fund—social security—has about $16 billion invested in Treasury issues at an average rate of about 2.56 percent. And until recently the U.S. Treasury was paying only 3 percent on more than $5½ billion of GI insurance trust funds. In comparison with the rate of interest paid on these Government retirement and trust funds, the REA rate is not very far out of line.

But do not make the mistake of justifying the REA interest rate by comparison with other interest payments because that actually has nothing to do with it. We have a 2 percent interest rate on REA loans for several very practical reasons. In the first place, REA cooperatives are called upon to provide electrical energy in the less profitable areas—the skim milk areas. The more lucrative areas, rich with cream, have long been served by others and the cooperatives have had to go in where no one else was willing to go. This, alone, justifies the favorable interest rate in my opinion.

Secondly, the financial structure of many cooperatives could not sustain a substantial increase in interest rates. If the REA program is to be a matter of public policy, then I maintain that public policy must also include the provision of loans at a rate the cooperatives can afford to pay and stay in business.

Thirdly, we are bringing electrical energy to rural America in order to afford farm people an equitable share of our national progress. As I see it, this is one of the few places where farm people in the United States have a chance to share equally with their more fortunate neighbors and it is the last farm program that should be put in jeopardy.

Finally, I maintain that the U.S. Treasury has profited substantially from the REA loan program. As I said earlier, we have generated a market for electrical equipment in the amount of at least $14 billion. The Federal excise, income, corporate, and other taxes generated by this volume of business has repaid the U.S. Treasury several times over any discount we may have had through our 2 percent interest rate loans to REA cooperatives.

Let me repeat what I said in the beginning. I consider our REA loan program one of the most beneficial from a purely economic viewpoint of any program devised by the Congress of the United States. Because I believe this I urge you to unite in support of your very able General Manager Clyde Ellis and the officers of your association in defense of the REA loan program as it exists today. Your friends in Congress will back you up.

These are some of the basic economic facts of our REA program. But we are a people who place spiritual and moral values above the dollar sign, so let us look briefly at some of these aspects of this program which has been so richly endowed with the capacity to lighten the burdens and the lives of farm people.

The great majority of farm and other rural residents have just recently moved into the wondrous electrical age. The upsurge in consumption of electrical energy bears witness to this development. In the last 15 years, the average kilowatt-hour consumption of farm consumers served by REA cooperatives has increased four times over—from 90 kilowatt-hours monthly in 1946 to 350 kilowatt-hours in 1959.

With the help of electrical equipment the workday of the farmer and the farm housewife have been shortened and the burdens lightened. Electrical water systems have modernized farm homes. Refrigeration safeguards food supplies and brings to market better quality products for nonfarm consumption. And the young people who represent the future of American agriculture now find rural living equally attractive as a home in town.

The introduction of electrical energy on American farms has probably done more than anything else to facilitate the production of high quality consumer goods and improve the efficiency of farm people. I can remember milking 8 to 12 cows by hand with the aid of a smoky lantern—and today 1 man in an electrified dairy barn can handle 5 to 6 times that number. Think what consumers would have to pay for their milk products if we didn't have milking machines to cut the cost of production. In our early farming days it was our backs and hands that provided the means of moving tons of silage, grain, hay, milk, and manure for our herds. Now we use our heads and a finger pushing a button on a switch does most of the job in a modern, electrified operation. Through electricity, farming is no longer drudgery.

If we as farmers could only be assured of an income commensurate with that of other segments of our population, our farm homes would be just as bright as electricity can make them. But if farm people must endure an income position at the bottom of the economic ladder in the United States, let us at least provide electricity so a farmer in my district can watch a television show and forget for the moment what the low-price programs of Ezra Taft Benson have done to his pocketbook. I think that's the least we can expect.

When Clyde Ellis asked me to come down to St. Louis and meet with you, I had no doubt in my mind that you would substantially agree with what I had to say about the REA program. I hope you have agreed that you will continue to give us your full support in our efforts to protect your program in the Halls of Congress.

I hope also that you recognize the vital importance of a sound agricultural economy to the fulfillment of your legitimate goals and ambitions. It is a remarkable tribute to your management ability that you have made the progress you have in the face of declining farm income, but I predict that your greatest era of growth and service lies ahead if we can bring economic parity to rural America.

Farm people are eternal optimists. They have to be to face the hazards and uncertainties that accompany the tilling of the soil and the tending of livestock. Because we always believe that tomorrow will be better than yesterday, I entertain the hope that our basic problems will soon be resolved with the help of an understanding public. We believe in the justice of our cause, and we have confidence in the fairness of the American people.

Let us go forward in our march of progress with faith in the future of this great land. REA has shown the road to better living, and it has demonstrated to the world that under our system there is ample opportunity to share equally the benefits of our technology.

It is now incumbent upon the Congress to face up to its responsibilities and assure to agriculture's 15 million Americans their just share of our national income. With the help of REA and with fair prices for that which we produce, our sons who till the soil will continue to be the backbone of this great country of ours.

These 15 million farm people are able and willing to feed the teeming millions at home and abroad. All we ask is our fair share of America's prosperity and the good life guaranteed to all our people by our system of self-government.

In the last quarter of a century, the darkness has left our farms. For the good of our people, the light must remain and the economic shadows must be dispersed.

Interest Ceiling

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. CURTIS of Missouri. Mr. Speaker, Mr. Edward H. Collins in his column in the New York Times of February 1, 1960, discusses the findings on chapter 9, section 5 of the Staff Report of the Joint Economic Committee, on its study of "Employment, Growth and Price Levels," as follows:

CONFLICT ON THE DEBT—A STUDY FINDS REPORT OVERVALUED ROLE OF U.S. BORROWING IN MARKET

(By Edward H. Collins)

Three weeks ago this column discussed one section of the Joint Economic Committee's Staff Report on its study of "Employment, Growth and Price Levels"—the document that presumably was to be the chief reliance of the committee in arriving at its final recommendations. This was section V of chapter 9. Main responsibility for the chapter as a whole, "Monetary Policy and Debt Management," is attributed to Warren L. Smith.

The findings on chapter 9, section V, here was somewhat less than enthusiastic. As this writer saw it, while the author's diagnosis of the present debt management problem was sound enough, the treatment prescribed seemed to add up to a series of suggestions for relieving the patient of his pain while studiously avoiding any proposal for dealing with the major cause of the illness.

PLIGHT OF MANAGERS

The term "plight" in the case of the debt managers, refers to the deterioration of the market for long-term direct Treasury obligations compared with other long-term bond issues. The problem has been gratuitously complicated by the refusal of Congress to remove the ceiling of 4¼ percent on interest rates on Treasury bond issues. But it stems basically from the emergence of new and competitive outlets for long-term investment funds—an emergence that has coincided with, and is to a considerable extent responsible for, a demand for long-term loans that tends to outrun the amount of the Nation's savings available for investment.

As Paul Heffernan, of the New York Times financial staff, recently put it: "The Government is embarrassed by financial competition with itself." More specifically, he added: "In the long-term market Treasury bonds go begging while investors buy higher yielding mortgage bonds guaranteed or insured by the Government itself. Meanwhile, in the short-term market, Treasury bills must compete with the short-dated paper of Fannie Mae, the land banks, the Home Owners' Loan Corporation, and other Government agencies.

The staff report of the Joint Committee makes no secret of the fact that it is aware of this state of affairs. Yields on Federal issues, it observes, have increased relative to those of other major borrowers, and this has occurred despite the fact that the Federal marketable debt has risen by only about $9 billion in the last decade, while the overall increase in national indebtedness (public and private) has expanded by approximately $350 billion.

With this background in mind, it might be advisable for anyone who contemplates reading the report of the Joint Committee itself, which was released last week, to see that he is firmly braced as he finds himself nearing page 37 of that document. It must be remembered that the legislators who wrote the majority findings of that report, if they are not the hardcore of the forces defending the 4¼-percent Treasury bond ceiling, are at least a representative cross section of them. Their uncritical acceptance of the general view that demand and supply are the culprits accountable for the low estate to which long-term governments have fallen in popularity would be tantamount to an admission of the unwisdom of their position on this issue.

DENY EVERYTHING

For reasons, however, that are, to this writer at least, completely inscrutable, the committee has decided, despite the delicate nature of the issue, to throw caution to the winds. Ignoring, not only the general view, but that of its own staff experts, it has fallen back on what appears to be that cynical injunction, "Deny everything." It has decided to meet the facts head on, with the result that what history teaches us is the inevitable consequence of such a course.

They have decided not only to deny the contentions of the demand-supply theorists, but to reply with a thesis that is its exact antithesis. It seems, according to the remarkable rebuttal of the committee, that, far from being unable to compete on even terms with the new, subsidized competition with which they are faced, the debt managers, as overwhelmingly the largest borrowers in the market, are actually in a position where they dominate the market to the point at which we now have imperfect competition.

The argument mounted in defense of this thesis is not only absurd; it borders on the ludicrous. We are told that in 1958 the Treasury's borrowings totaled $62,200 million. As against this, we are told, corporate borrowing were only $11,400 million and the borrowings of state and local government only $7,800 million. In short, in the words of the committee, the Federal Government borrowed more than three quarters of the funds raised in the long-term market. It is perhaps sufficient to say that of this imposing, but meaningless, figure, $22 billion can be ignored at the start since, as the committees own staff experts observed, it represented sales to Government trust funds and the Federal Reserve banks, which are, for purposes of this discussion, "fictitious transactions."

Since the question here is "How great a demand did the Treasury make on the Nation's supply of investment funds?", the next step is to lop off from the remaining $40,200 million the $32,200 million of refunding operation, which represented merely the exchange of one issue for another. This brings us to $7,800 million, which, needless to say, is a fairly far cry from the committee's imposing total of $62,200 million.

But even that is a gross overstatement of the facts. In 1958 the Treasury showed a net addition of $10,100 million to its short-term marketable debt; but the total of its long-term debt outstanding rose by a mere $1,300 million. Not satisfied with choosing a year of exceptionally heavy Government borrowing to make their case, fantastically overstating the total of 1958 Treasury borrowing and representing short-term and long-term debt. The authors conveniently omitted to include in their tabulation the most important single competitor of the Treasury in the long-term market, namely, the gigantic total represented by mortgage loans.

Just to put the picture in something like perspective, here is how the major borrowing groups shared in the long-term market for loans in the 6-year period 1953–59:

	In billions
U.S. Treasury	2.5
Mortgage borrowing	80.5
State and municipal issues	25.1
Corporate issues	75.9
Total	184.0

In this table, Treasury long-term borrowing refers to issues of 10 years and upward. If this is broadened to include short-term bonds (5 to 10 years) the figure becomes 10,100 million. In that case it would represent 5.3 percent of the new total, which would of course become $191,600 million.

Thunder From Syria

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting article which appeared in the Washington (D.C.) Post on February 24, 1960:

THUNDER FROM SYRIA

President Nasser's bristling comments in Damascus probably derive more from separatist problems in Syria than from any imminent danger of war with Israel. The United Arab Republic has been havings its troubles consolidating the merger between Egypt and Syria, and for a dictator to divert attention by invoking foreign threats is an old technique. Colonel Nasser managed to deliver verbal broadsides against just about everyone—the United States, Britain, and France for the old status quo tripartite agreement of 1950, the Communists, the Kassem regime in Iraq and of course Israel. Simultaneously Cairo newspapers have been talking of force against Israel.

There seems to be nothing to the bogey of Israeli mobilization. Nevertheless, the Nasser line is disturbing because it continues to ignore the role of the United States at the time of the Suez invasion and because it emphasizes the irreconcilability of relations in the Near East. The bluster coincides with the warning by United Nations Secretary General Hammarskjold that the power of the U.N. secretariat is limited in the impasse between Israel and the Arab States which is falling back into a dangerous situation.

The problem in its immediate form arises from Israel's plans for water development and concern with the demilitarized zone on her borders, but more basically it stems from the discrimination in the Suez Canal. Not only can no Israeli ship transit the canal, but for nearly a year the UAR has been halting other ships with non-military cargoes from Israel. International law, past Security Council directives and the work of Mr. Hammarskjold have been unavailing.

Happily the U.S. Navy has rescinded a humiliating directive holding the owners of chartered ships which have traded with Israel responsible for any delays occasioned by Arab refusal to accommodate such ships. This sort of cringing by a great nation merely abetted the Arab boycott, and the offensive rule has been properly stricken. Unfortunately, nothing effective has been done to bear out President Eisenhower's public assumption at the time of the Israeli withdrawal from Gaza 3 years ago that there would be no blockade restrictions against Israel in the Suez Canal and that if obstructions should occur there would be firm action by the society of nations.

It is unnecessary to endorse particular Israeli moves or to disregard the desirability of improved relations with the UAR to understand the principle at stake. What action might be feasible short of force is debatable, but the problem at least warrants the attention of the Security Council and General Assembly. In rendering mere lip service to the principle this country encourages President Nasser's thunder.

Take Another Look, Mr. Kearns

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald, Rock Hill, S.C., of February 24, 1960:

TAKE ANOTHER LOOK, MR. KEARNS

Henry Kearns, Assistant Secretary of Commerce, apparently takes a light view of the foreign textile import situation and it is disturbing.

It is disturbing because Kearns is the Government official thought to be most closely identified with U.S. textile policy on foreign problems.

Speaking to textile leaders in Charlotte recently, Kearns said that he found "no obvious correlation" between imports of foreign textiles and economic changes in the domestic textile industry.

That's Kearns' opinion. Men in the textile business say that foreign textile imports are hurting the U.S. textile industry. They say that many textile plants have been forced to shut down and one of the primary reasons is unfair competition from cheap textile imports. They say we are, in effect, exporting American jobs.

In an advertisement in today's Evening Herald, J. P. Stevens and Co., Inc., points out that a Senate committee studied the problems of the American textile industry more than a year ago. The committee recommended that the flow of foreign textile products into this country be regulated. Says the advertisement, "To date, no action has been taken on this recommendation."

Perhaps the reason no action has been taken is the attitude of men like Kearns who are in positions of authority in the Government.

As pointed out in the Stevens' advertisement, the textile industry realizes that trade between nations is helpful and desirable.

The advertisement says, "Our foreign trade policy is an integral part of our Government's overall foreign policy, which should be respected for the important job it does. There

is no question of willingness to share the load to enable the country to carry the economic burden of an enlightened foreign policy. In sharing, however, circumstances have placed an undue portion of the burden on the American textile industry. * * *"

Our textile leaders say the textile industry is being hurt by foreign imports. Kearns says it isn't. Who are we to believe?

The leaders of the textile industry are men who should know what's good and what's bad for the industry—their welfare and the welfare of the industry depend on it. They say imports are bad for the industry and they can't all be entirely wrong.

We suggest Mr. Kearns take another, and closer, look at the situation.

The Advertiser's Right To Toot His Own Horn

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following talk to the Michigan Council of the American Association of Advertising Agencies, Detroit, Mich., February 3, 1960:

THE ADVERTISER'S RIGHT TO TOOT HIS OWN HORN

(By Leo Burnett)

Several months ago when I accepted the invitation of your committee to participate in this program the subject assigned to me was "Copy."

Recently I asked to have the title changed to enable me to speak up about a few things that give me great concern.

These things relate to copy all right, but more to its birthright than to its anatomy.

Perhaps some explanation of the revised title is in order. I have read that long before the invention of the printing press the seller did indeed toot his own horn through the medium of a town crier who blew a horn to attract attention to his message.

Through the ages the seller has enjoyed and exercised his right to proclaim his wares and to represent them in their best light.

I suppose that in some early day a caveman may have traded a leopard skin for an earthern pot, cleverly holding his thumb over a hole in the corner of the skin to conceal the defect, and perhaps after the defect was discovered a good clubbing match may have ensued. If the caveman had extolled the glossiness of the hide and the thickness of the winter-killed fur without either mentioning or concealing the hole, he would have been legitimately exercising the art of persuasive salesmanship. The minute he put his thumb over the hole he was guilty of deception and fraudulence.

Everyone of us at one time or another has something to sell, whether it's a house and lot, a used car, a banged-up old typewriter or ping-pong table, or a political credo. Whatever we are selling, we can hardly be expected to misrepresent it on the negative side, but there are always ways of presenting it positively and persuasively without putting our thumb over the hole.

No one has ever been able to legislate or regulate the personality of a good salesman or, for that matter, a successful politician.

In my 40 years or so in and around advertising I have learned one or two things.

First and foremost, I have learned that the American purchaser is a tough little baby and he doesn't have to be wrapped in cotton.

Quick perception of misrepresentation, exaggeration, half-truths, and weasel words is part of his built-in protective mechanism.

He applies it to what he sees in store windows when the goods are marked down, to what the salesman tells him, and to the appeals or political candidates and union leaders, as well as to what he sees in magazines, newspapers, in outdoor posters, what he sees and hears over the air and gets through the mail.

As pure as selling ever becomes, the purchaser will continue to exercise his right sharply to evaluate what he sees and hears. Kids who can't pronounce "caveat emptor" are exposed to it every day. In my boyhood it was "aggies" and "glassies." Today I suppose it is rock and roll records and pictures of Elvis Presley. (I'm told that in today's market one Elvis is worth two Frankie Avalons and three Ricky Nedsons.)

In my experience P. T. Barnum was overoptimistic about the high birthrate of suckers. As tough as he is, however, the American purchaser likes to dream. Advertising encourages him to dream and to aspire. Identification with certain advertised products and brands often gives him a sense of satisfaction and fulfillment which is well worth the price he pays.

This American purchaser is also a human being, and he appreciates being talked to like one. He hates stuffiness and dullness in advertising fully as much as he does in people.

During my years in advertising I have seen some changes.

At my request, the 4A's furnished me with a complete rundown of the acts of self-regulation by advertisers, agencies, media, national and local organizations since the early 1900's. And a very impressive list it is. At the local level, of course, one of the most powerful forces for purging the rats is the better business bureau, which now has 101 bureaus in the United States. As a director of the Chicago bureau I know personally of its effectiveness.

Overriding all these efforts at self-regulation, I am impressed by the increased acceptance of a philosophy which has been expressed in many ways, but most aptly, I think, by Jim Young. In an address at Cornell University back in 1949 he said:

"Advertising, more than most activities, is a self-purifying stream. It commits all its sins in public. It conducts its own continuous public opinion poll through the nickels, dimes, quarters, and dollars which people pay over the counters of America every day. The people steadily tend to wash out the advertiser who has not served some group of them." Regardless of the moral issue, dishonesty in advertising has proved very unprofitable.

On the grounds of good taste I am sure that, as a group, we are as sensitive as anybody to over-dramatization in our living rooms, of all the unpleasant emanations and unmentionable minor ailments of the human carcass.

Just as the medical profession has its quacks and the legal profession its shysters, we in the advertising business of course have our twisty operators, and I am sure that there is not a one of us in his right mind who doesn't want these scalawags kicked out of the lodge forthwith. They may call themselves "advertising men," but I would rather have them calling hogs. They don't make me stop being proud of advertising, but I am sure that I reflect the sentiments of 99 percent of the people in our business when I express the wish that I never had to be seen with them, or even on the same side of the street.

I have covered the built-in, self-purifying character of advertising. Now I want to mention another trend which I regard as especially significant.

I refer to the increasing acceptance of advertising as a basic means of communications in public service causes. As you know, this has developed particularly since the war under the auspices of the advertising council.

You are familiar, I am sure, with its crusade against highway accidents, forest fires, in behalf of better schools and higher education, in the sale of U.S. Savings Bonds, and other causes, but I am especially impressed with its newly effective use in more baffling areas. For example, in behalf of the grossly misunderstood problem of mental health. Through advertising, and advertising alone, made possible by the joint efforts of advertisers, agencies and media and financed by them, there have been more than 1,300,000 requests for helpful literature on this important subject.

As I hope you have gathered by now, I am mightly proud to be in this business and to be able to point to its advancement as an increasingly important part of both our economy and our culture. I believe that any comparison between advertising today and that of the 1900's, or even the 1920's, will demonstrate that the morality of advertising has improved considerably more than the morality of the general public.

What worries me is this:

Over the years, while these good things have been happening, we have seen various efforts by conscientious and dedicated but overzealous, self-appointed people to apply bureaucratic regulation to various phases of marketing and advertising to protect the American purchaser from himself.

These are the people who would take all the gleam out of advertising and all the glitter off of packages. Instead, they would have us buy from listings, with products numbered instead of named, and graded A, B, C, etc., instead of described or pictured. This is putting all production and promotion on a penitentiary basis, and what a dull, drab world it would be if this philosophy became a reality.

Advertising today is going through another phase.

Again it is being isolated from the entire complex fabric of doing business and, by implication at least, the experienced, socially-conscious advertiser is being tarred with the same brush as the gyp artist and one-shot promoter who deliberately misrepresents his goods. Let's face it, advertising generally is being smeared.

This is an implication which I hope and believe the Federal Trade Commission would like to avoid.

If the Federal Trade Commission keeps its perspective, I hope our industry does too.

I am disturbed by some of our behavior to date, as old codes are being dusted off and new ones are being written.

I can hardly blame Mr. Kintner for the attitude he expressed in an address to the Audit Bureau of Circulations entitled, "Self-Discipline at the Crossroads." Referring to trade reactions to an earlier speech on the Robinson-Patman Act he said, "For a law of our land to be enforced with vigor should not be so newsworthy. The reaction to my remarks was a little embarrassing—like being complimented for wearing a clean shirt."

In some respects I believe our industry is acting much like a kid who figures he can't win anyway, so he won't deny anything he's accused of.

What I especially hope is that American advertising shall not allow itself to be scared or regulated into desiccated dullness, and that it may continue to exercise its natural, normal American zest. As it is, we already have too much dull, inane advertising, chiefly written by committees.

I guess the best way to express what I mean is to try to describe my own attitude in approaching a piece of copy.

My state of mind is one of quiet exurberance, maybe a rather muted version of horn-tooting, but exuberance all the same.

This advertiser, I say to myself, put the best he could into the product. It is his. He is proud of it, and has a right to be proud of it.

I know that the designers and engineers and other technicians who created this product knew they must come through with something worthy of enthusiastic advertising.

The boys who make the things that make the American standard of living what it is should preserve their right and their courage to indulge in a certain amount of exuberance in their ads—if for no other reason than that it attracts legitimate attention in an overnoisy world, gives them spirit, and sets them a constantly higher target to shoot at in their production.

Because this advertiser is a realist, he knows that his product had better measure up to its ads or it will be slapped down brutally and almost instantly by the hard-boiled prospective customer who is ready to go along with dreams as long as they come true at the dealer's and at home, but is relentless when he catches a product in a lie.

The product had better live up to its fancies, or sudden death is right around the corner. If consumers don't see to this, competitors will.

Certainly no manufacturer should be denied the right to put his best foot forward, because that is the only way to enable the other foot next to become the best foot.

I agree with Roy Whittier who once said, "Too many advertisements spend so much time telling why the product is best that they fail to tell why it's good," but I am sure Roy agrees that it is no sin to tell the truth vigorously and imaginatively.

I believe that some advertisers tend to give the appearance of cheating or merely boasting because they are not skillful enough to tell the truth interestingly and convincingly. Here's a small example of what I mean:

I think the advertiser who says "better than" renders himself a disservice unless he says better than what. And the "than what" part ought to be truthful and specific. If you have a car that has 25 percent more room inside than last year's model, that's what the ad ought to say—not "25 percent more room."

The real joy of this business to me is an effort to tell the truth, the whole truth, and nothing but the truth about a product more skillfully, convincingly and resultfully than somebody else does it about a competitive product.

Judging by his public remarks, I am sure that Mr. Kintner is not out to destroy creativity in advertising or to dampen the exuberance, quiet or otherwise, of honest advertisers or permit scandals in one segment of the industry to cloud the fundamentals of all advertising.

I can't believe that if it had exercised jurisdiction over the advertising of Rolls Royce and its ad on the noisy clock the FTC would have required Dave Ogilvy or the Rolls Royce people to supply decibel ratings.

I believe that some of the double-negatives and adroit understatements of the British, from Winston Churchill down, are about the highest form of bragging there is—and I am all for it.

I feel the same about the extravagant but good-humored implications of a lot of European poster art. I am all for that, too.

Speaking of tooting your own horn, I am curious to know what the FTC proposes to do about the State of Texas.

We who serve manufacturers in the conception and creation of advertising must take cognizance of all that is to be learned to help us sustain the integrity of advertising and to enhance its good taste, but we must not become mice when it comes to saying some mighty nice things—in a nice way—about the things we are trying to help sell. I am sure there are ways of doing this with no tinge of deceit and within the letter of the law.

Where the Real Budget Story Is

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to call attention to a story which appeared in Business Week of February 20, 1960:

WHERE THE REAL BUDGET STORY IS

There is a set of figures deep in the fine print in the back of the 1,000-page Federal budget which is venerated by a small band of experts as the true word in fiscal economics. It is called "Special Analysis A."

They like it because it shows more clearly than the regular budget what really happens in the massive exchange of dollars between the Federal Government and the people.

But the times are catching up with Special Analysis A. It now reveals so many things the ordinary budget fails to record that it is being drawn from its cloister to the center of the stage.

MORE USEFUL STORY

For that reason this year Business Week reported the administration's budget proposals for fiscal 1961 primarily in terms of "Special Analysis A." The "cash budget" is its usual name. This treatment seems likely to become more common because the cash budget tells a more meaningful and more meaningful and more useful story than the better known regular, or administrative, budget. Here are some reasons why it is superior:

It is more comprehensive. Special Analysis A now includes $18.2 billion more tax collections and $16.5 billion more spending than the regular, or administrative budget (charts).

It is a more delicate instrument of economic analysis. It shows more precisely who lobs the money into the Treasury and then who gets it back on the return volley. There's a hundred billion dollars involved, and the expert wants to know as much as possible about the shifting of these billions among payers and receivers—in order to assess better the budget's impact on business, economic trends, politics, and the national welfare.

It is the only place to keep track of what is really happening to tax collections.

So far as the administrative budget alone is concerned, the big tax rate news of the past 10 years was the $7 billion reduction of January 1, 1954. But over in Special Analysis A is another story. This shows that a series of small increases, mostly in social security taxes, have virtually offset the single big reduction.

I. WIDENING GAP

Until recently government officials could pretty much ignore Special Analysis A. When only a few billion dollars separated separated the two methods, it was natural for lawmakers and administrators alike to concentrate their attention on the smaller one, which covers most workaday activities.

The change began when, year after year, the discrepancy between the two budget concepts widened; differences as large as $16 billion and $18 billion simply can't be blinked away. Furthermore, it seems likely that the gap will continue to widen. This is because the cash budget concept includes the social security trust funds which the administrative budget excludes.

For the first few years of social security, the funds were handled in the administrative budget. But after the Supreme Court in 1938 ended doubt about the constitutionality of the system, its managers set up the funds as separate entities outside the ordinary budget routine. They wanted the funds to have the look of a system of insurance, not just another activity of government subject to some ill-considered change by a future Congress.

Politicians show no signs of stopping the growth of the social security program. In the past decade the trust funds have grown much more rapidly than general government, and less there is a change in the political climate, this will continue.

Third budget—But even when the day comes that the cash budget finally takes first place in official thinking, the real scope of Federal spending and collecting will be woefully understated unless another reform is instituted.

This would be a system that would pick up $15 billion of payments to the public and receipts from the public that are not recorded in either the administrative or the cash concepts. These are payments that flow through the so-called business enterprise activities of the Government, chiefly the Post Office, or those that come into the Treasury as excess receipts and are sent back out as refunds.

If this more comprehensive measurement were in use this year, incidentally, it would look something like this, along with the two already established systems:

3 budget concepts, fiscal 1961

Type of budget	Payments	Receipts
	Billion	*Billion*
Administrative	$79.8	$84.0
Cash	96.3	102.2
Comprehensive	111.3	117.2

II. STILL A MYSTERY

A somewhat closer look at these three concepts and how they differ throws light on a curious situation: Though the $100 billion or so that flows through Federal accounts in a year is the largest, the most important, the most scrutinized, and the most hotly debated block of public spending in the world, its impact on the economy remains very largely an enigma.

Controversial: In the 1957–58 recession there was a fierce debate among the experts over the relative merits of a tax reduction or a rise in spending as the best way of checking the downturn.

The decision was to increase spending, but it was made in an aura of guess, conjecture, and political emotion. It did not stem from any certainy about the workings of the budget.

Because such bitter disputes about the role of the budget arise every time there is a major shift in the economy, it has been shoved pretty much to one side as a method of keeping the economy on an even keel. The main burden of counteracting cyclical swings has been left to the Federal Reserve, which eases credit in times of recession, then tightens it in times of boom to try to check inflation.

There is growing discontent with this policy mix; critics are calling for greater use of the budget and a lesser reliance on credit policy. The Democrats on the Joint Economic Committee of Congress included this

among their major recommendations after a 6-month study of the economy. But it is hard to see how fiscal policy can be used with greater precision unless the basic tools of analysis are improved.

Dominant: The accounts as presented in the administrative budget still get practically all the attention in Washington. The President sends his spending proposals to Congress in this form in January each year. Congress approves a spending plan, and votes future authority to spend, in this form. It is so thoroughly entrenched as the dominant system that in Congress and the executive department it is known simply as the budget.

All the multitudinous activities of Government are reported here, so long as the Government allots to itself clear, unquestioned, sole ownership of the funds involved.

It is this concept of ownership that makes a second system of accounts necessary from an auditing standpoint.

III. PART OWNER

The Government does not consider itself full owner of the accounts established, for the most part, in the 1930's to finance the social security programs: old-age and survivors insurance, disability insurance, unemployment relief, the railroad workers' retirement account, and the retirement program for Federal employees.

Purists can make a case that this is a matter of semantics only.

The Government has collected the sums in these accounts with all the force of law and absolute sovereignty. Workers have no choice but to have 3 percent of their pay up to $4,800 deducted and sent to the Treasury for the old-age and disability accounts, and employers much cough up a like amount. These payments are just as much beyond recall of the individual as income or excise tax payments.

But such is the majesty of an act of Congress, that if Congress says there is an element of mixed ownership involved, then that is the case, and the funds are handled separately. The theory is that those who contribute expect someday to be the beneficiaries, and thus are said to have special claims on the trust funds.

These social security funds are set up on the Government's books as trusts, to be used for the purposes assigned to them and no other. Including the unemployment insurance fund, their unexpended balance will reach a total of $45 billion in fiscal 1961. Collections will total $17.8 billion that year; expenditures $16 billion.

Highway funds: This mixed ownership concept was strained further when the Eisenhower administration, with the approval of Congress, decided to give the highway modernization program special status.

Eisenhower insisted that he would not build more roads than highway users would pay for annually in taxes. So we have the earmarked highway trust fund. It will receive $2.9 billion of receipts in fiscal 1961 and make payments of $2.8 billion, with none of this appearing in the administration budget.

Other outsiders: The administration made one other important decision that widens the gap between the two budget concepts. It took the secondary market operation of the Federal National Mortgage Association out of the administrative accounts. In fiscal 1961, this activity will result in a net expense of $800 million which can be found only in the trust accounts. By law, anyone selling a mortgage to Fanny Mae is required to buy common stock in the association, again introducing the theory of mixed ownership.

Rural rehabilitation funds of the Farmer's Home Administration, alien property funds, and a few other activities are also handled in this way.

IV. GROWING TWICE AS FAST

The trust funds have shown a much livelier rate of growth than the administrative budget. In 1947, the first of the postwar fiscal years, administrative spending was $39 billion. It is expected to be just under $80 billion next fiscal year.

In 1947, trust fund expenditures were only $5.2 billion; they are heading toward $21.3 billion in 1961. In short, during a period when administrative expenditures have doubled, trust fund expenditures have more than quadrupled.

To bring the trust funds into the general financial picture, their accounts are simply added to the administrative budget totals. This is done in special analysis A, which Government experts call the consolidated cash accounts. It appears in the budget document (p. 897 in the budget for fiscal 1961) under the heading, "Federal Government Receipts From and Payments to the Public."

Tax Story: Obviously the cash concept has great advantages over the administrative accounts for anyone interested in the size, the content, and the direction of cash flows between the Government and the people.

On the surface, if attention were paid only to the regular budget $18.2 billion of tax collections would be overlooked in fiscal 1961. But there is more involved.

The tax cut of January 1, 1954, was the biggest single slash in U.S. history, and the only major one of the past decade. It applied entirely to receipts that go into the administrative budget. There have been some niggling cuts since: excises on admissions, on oil transported by pipeline and on freight. Altogether, the reductions that have gone into effect in the last 10 years were worth about $7 billion or a little over to taxpayers the year they went into effect.

Steadily Rising: In the trust funds, the picture is different. Here the story is one of steady increases.

There have been four separate increases in recent years in the payroll taxes that go to the old age and disability trust funds. The most recent one took its bite into individual pay checks and employers' costs January 1 this year, and is expected to furnish $2 billion or more a year in additional revenue. The total of these tax increases since January 1, 1954, is $5 billion a year.

In addition, taxes paid into the railroad retirement fund have been increased $300 million.

The tax on motor fuels going into the highway trust fund has been increased from 3 cents to 4 cents per gallon, at a cost to users of $826 million. A special tax on trucks brings in $36 million.

These increases—recorded only in the cash accounts—come to more than $6 billion a year. Over in the administrative budget is another increase in revenues, this one stemming from a rise in postal rates. Altogether the sum of the small increases just about cancels out the effects of the one big cut.

The sums that don't even show in the cash budget were the special concern of Percival F. Brundage when he was Eisenhower's Director of the Budget. He evolved a method of showing the missing funds, which he presented to a number of congressional committees. There was a marked lack of interest among the lawmakers.

Enterprises: Most important is something in excess of $10 billion that flows in and out of what the Budget Bureau calls Government enterprise operations—such as the Post Office, the Commodity Credit Corporation, the Federal National Mortgage Association in its overall operations, and the Export-Import Bank.

Such operations, all of which conduct a business-type program, are represented in the cash accounts and the administrative budget only by the net surplus or deficit in their activities.

All that shows for the Post Office in the fiscal 1961 budget total, for example, is the $49 million excess of expenditures over receipts.

Effect: Another $5 million or so is in the form of receipts collected from the public in the form of taxes, fees, and the like, and then refunded. Inasmuch as this consists of merely an exchange of cash, and a fairly speedy one in most cases, its economic effect is trifling.

But the public enterprise activities are significant. They hire workers, conduct research, order equipment, ship goods, and in general have an overall economic effect far greater than the mere net of all of their financial activities.

Hard to measure: Budget professionals in the Government agree that Brundage was working on a useful addition to the tools of analysis, and believe something should be done with it eventually, at least in the form of a special table in the back of the budget document. It poses some difficult technical problems, however.

Fiscal analysis is a complex art at best. No set of accounts, no matter how simple or comprehensive, can measure the powerful and subtle effects of Federal operations in all their ramifications.

The stimulating effect of a Government program, for example, is felt not when the Treasury finally writes the checks for the goods purchased, but when the contract is let—6 months or maybe 2 years before delivery of the finished product. Yet the budget accounts, both administrative and cash, are kept on a check-issued basis.

Receipts show the same tendency to work their effect ahead of the actual figures. A tax rise or cut will begin affecting business and personal decisions months before there is any change in the actual flow of cash to the Government.

Salute to U.S. Olympic Hockey Team

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. LANGEN. Mr. Speaker, I would like to take this opportunity to ask the Members of the Congress of the United States to join me in a salute to the U.S. Olympic hockey team, winners of the international competition at Squaw Valley.

The gold medal winners certainly exhibited a "gold medal" brand of hockey in becoming the first U.S. hockey team to capture first place in Olympic competition. In the final 4 days of play, they upset favored Canada, and took come-from-behind victories over defending champion Russia and Czechoslovakia. Ice hockey being the grueling game that it is, this feat would have to rank as next to impossible.

We are proud of the fact that a large part of this U.S. team hails from the State of Minnesota. And I am especially proud that two of the boys most instrumental in the U.S. victory, brothers Bill and Roger Christian, reside in the Ninth Congressional District community of Warroad.

Our hats are off to these fine, spirited representatives of our Nation.

An Alert, Informed, Effective Federation Works Constantly for St. Louis Consumers

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mrs. SULLIVAN. Mr. Speaker, the consumer usually is the forgotten person in our daily economic life except, too often, as the "sucker" for those with schemes for making a fast dollar at the expense of the unwary purchaser.

The consumers of St. Louis, however, are unusually fortunate for, in addition to newspapers which have the courage to battle for the consumer interest at every opportunity, we also have an outstanding group of dedicated women banded together as the St. Louis Consumer Federation to do battle on every front for the housewife and her family. I think it might be useful to the Congress, and to all who read the CONGRESSIONAL RECORD, to know how such an organization goes about its work of protecting and supporting the consumer interest month in and month out.

The list of legislative issues in which the St. Louis Consumer Federation has taken a strong interest would be almost endless, and the effectiveness of the group is legendary in St. Louis. I do not know of any good reason why women in other cities in the country could not organize similarly effective consumer federations, and I know that our ladies in St. Louis would be glad to give groups in other cities some invaluable advice in setting up such organizations and making them operate effectively, as ours does.

WOMEN OF HIGH STANDING IN THE COMMUNITY

This thought struck me forcefully, Mr. Speaker, as I was reading the most recent newsletter issued by the St. Louis Consumer Federation under the presidency of my good friend, Mrs. Joseph M. Klamon. It occurred to me that the newsletter itself gives the best possible insight into the kind of organization it is and the help it could give to groups in other cities in setting up similar movements. Therefore, Mr. Speaker, under unanimous consent I am inserting the newsletter in the Appendix of the CONGRESSIONAL RECORD, despite the fact that it refers to me in a flattering manner. While I appreciate the nice comments about me, my purpose in calling attention to the newsletter is to suggest how other cities could profit—how their usually voiceless consumers could profit—by having such a consumer federation in operation, under the direction of women who have standing in the community and who are dedicated to the public interest.

In St. Louis, some of our most outstanding civic leaders are active members of the consumer federation, and they "let the chips fall where they may" in fighting the consumers' battles.

The most recent newsletter of the St. Louis Consumer Federation follows:

[St. Louis Consumer Federation, 1623 Hickory Street, St. Louis, Mo., Mrs. Joseph M. Klamon, president]

THE HIGH COST OF DRUGS

Since our November meeting—subject: "The Public's Stake in the Wonder Drugs"—we have been following the congressional investigation on the reasons for the high cost of drugs. The Senate Antitrust and Monopoly Subcommittee has completed hearings on antiarthritic drugs and are now proceeding to check tranquilizers, later antibiotics.

Out of these first investigations of high prescription-drug prices came the jarring disclosure of markups of more than 1,000 percent above the manufacturer's cost for the drugs, reflecting enormous earnings even after the most generous allowances for research, promotion, packaging and selling. Indeed, there was one instance of a tranquilizing drug, Thorazine, which was perfected in France, and merely licensed to the American drug company, Smith, Kline and French Laboratories. This drug is sold to the American consumer for many times the retail price in France. In a letter to the people in the Post-Dispatch of February 10, 1960, Mr. G. F. Roll, director of public relations of Smith, Kline and French Laboratories defends the high markup because of funds spent in research on a similar product which was not put on the market.

During the congressional hearings, many of the drug companies testified that the cost of research was responsible for the high prices of drugs. However, the February 15, 1960 issue of Life magazine carries the following comments, "Although cost breakdowns vary considerably, materials take 4 percent, manufacturing 3 percent of the retail price of a wonder drug, research takes 5 percent and promotion 14 percent."

Life says, "The average doctor is deluged with sales talk, either through direct mail or visits from drug firm representatives known as detail men. In a single day a doctor may collect $40 worth of free drug samples. To promote a new drug, a company may spend half a million dollars to hit almost every doctor in the land with a barrage of letters, brochures and personal calls.

"Such saturation promotion not only adds to the cost of a company's prescription drugs, it also persuades many doctors to prescribe—and many patients to want—new drugs simply because they are new, not because they are necessarily better than something old or cheap. The drug companies argue that their costly promotions are postgraduate education for doctors, and a majority of the doctors themselves consider detail men helpful and a lot easier to take than the brochures. Many medical authorities question the object of all this promotion. 'Only a small fraction of modern drugs is really essential,' says Dr. Louis Lasagna, associate professor of medicine and pharmacology at Johns Hopkins. 'Most of the 400-odd new products promoted by the companies each year are only fancy wrinkles on old ideas. They are introduced because they are profitable, not because they have a medical advantage over the products of preceding years.' "

The high cost of prescription drugs has been a matter of growing concern to many consumers for several years. This is one of a number of problems where the individual is helpless. If he is sick, he must pay for the medicine the doctor prescribes. The physician could help by writing prescriptions in generic terms rather than brand names because the use of well-known brands in prescriptions raises the cost considerably.

One of our board members would like to share with you her experience with the price of a drug as fixed by the retail druggist. She had the original prescription filled by the druggist with whom she usually deals, and was charged $4.50 for 30 tablets. Since she was familiar with the name of the drug, she decided to shop around. She inquired at five different drugstores, four in the area where she lives and one out of that area. The quoted prices ranged from $2 to $4.50 for the 30 tablets, with no two prices alike.

In a recent survey made by the Chicago University National Opinion Research Center, they found more than a third of the people (38 percent) believed the cost of prescriptions is much too high.

We are all awaiting with interest the recommendations from the Senate subcommittee after the hearings are completed.

LAMB GRADING

Last summer the Department of Agriculture announced that it was considering dropping U.S. Government grades on lamb and mutton and asked that all who wished to be heard on the matter speak up before August 1. The Consumer Federation at that time protested to Secretary Benson against removal of this grading. There were also letters of protest from many individual members of the federation. As a result of the many protests received by the Agriculture Department Secretary Benson announced on July 23 that grading would not be suspended. A meeting was held in Kansas City on August 25 to discuss revision of standards for lamb grading and in October the Department announced that a new basis for grading was under consideration. On December 2, Secretary Benson announced that grading was to be suspended for 1 year, beginning January 4, 1960, as various segments of the packing and sheep growing industries could not agree on standards acceptable to them. The views of the individual consumers apparently were not considered. Mrs. LEONOR K. SULLIVAN, Member of Congress representing the Missouri Third District, protested strongly against this move for the protection of the consumer and had our letter reprinted in full in the CONGRESSIONAL RECORD. She felt, as we do, that consumers would not be able to purchase lamb intelligently without Government grade markings. We as an organization also sent a wire of protest at this time.

On December 30 it was announced that grading suspension would be delayed at the request of Chairman Harold D. Cooley of the House Agriculture Committee, who wished to investigate this matter further. After hearings, the House Agriculture Committee on January 19 recommended that lamb grading be retained. As a result, the Department of Agriculture announced February 5, 1960 that grading would be continued but under revised standards. Mr. Benson said that the new standards which will be subject to continued study, would be put into effect as quickly as Federal personnel could become acquainted with them.

The revised standards modify the present grading mainly by rewriting the minimum requirements for prime and choice, the two top grades.

Congressional and department hearings brought out that many consumer groups favored the continuation of Federal grading service for lamb and mutton.

AGRICULTURE SURPLUSES—THE PRESIDENT

(Taken from the text of President Eisenhower's farm message to Congress, February 9, 1960.)

"We are most fortunate that our problem is overabundance rather than shortage * * * Federal funds, approximately $3,500 million or 30 percent of total funds invested in inventories and loans to Commodity Credit Corporation goes for wheat which provides only 6 percent of the cash receipts from sales of farm products. The Government sustains a net cost of more than

$1,000 a minute—$1,500,000 every day—the year around, to stabilize wheat prices and income."

What this means to consumers who still have to pay high prices for food including the cost of storage for food no one eats is not mentioned by the President. He does express concern about the farmer, however. "Ultimately, if our Government does not act quickly and constructively, the danger is very real that this entire program will collapse under the pressure of public indignation and thousands of our farming people will be hurt."

We are glad to know that the administration is urging action to reduce our huge food surplus. A consumer program the President neglects to mention is a domestic surplus food stamp program to distribute some of the surplus to people not now able to eat enough for health due to low income, notably people on Government relief programs, people in distress areas, such as those working in the Florida vegetable fields, etc. This type of program would not interfere with normal channels of trade, would alleviate undernourishment at home, and would not be the degrading "soup line" type of distribution now used. The surplus stamp plan has already been voted on favorably by Congress but is now bottlenecked by the administration.

LIPSTICK COLORS—ARE THEY HARMFUL?

A public hearing will be held, beginning February 17, to determine whether 14 coloring materials used principally in lipstick will be removed from the list of colors certified as safe by the Food and Drug Administration. The law makes provision for such hearings when they are requested by business concerns and when reasonable grounds for such hearings are given. The representatives of the industry feel the original toxicity tests on the tested colors were not sufficiently complete to justify the conclusion that the colors are not harmless.

In ordering the hearing, the FDA said, "It is important to settle the issue whether materials that are not harmless are being consumed, even in small quantities. If such materials are being consumed, the law requires that they be taken off the harmless list."

Three colors (D. & C. red Nos. 11, 12, 13) are being restored to the harmless list. They were originally removed because their chemical composition is closely related to the chemical composition of D. & C. No. 10, which had proved to be toxic in short term animal feeding tests. The conclusion with respect to red Nos. 11, 12, and 13 was challenged by the industry, and subsequent short term feeding tests with the three colors did not produce harmful effects in the test animals. Longer term tests, however, will be conducted for the three colors to determine whether their classification as "harmless" should be continued.

FOOD ADDITIVES INFORMATION

A new booklet called "What Consumers Should Know About Food Additives" published by the Food and Drug Administration to answer the many questions people are asking about food additives and the new law which goes into effect March 6, 1960. The booklet tells the story of how food additives came to be developed, why and how they are used in food production, why public health safeguards are necessary, and how the new law works. It also gives factual information about many of the more important kinds of food additives and explains how the law controls two special classes of additives, pesticides, and coal-tar colors. The booklet is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington D.C.—Price: 15 cents.

MAN-TAN OR TANNING WITHOUT SUNLIGHT

A new cosmetic, Man-Tan, is being heavily promoted as an "after shave sun-tan lotion with vitamin D . . . laboratory tested, pronounced safe and effective on all types of skin." In spite of this testing, according to Consumers Union, doctors are beginning to report cases of severe allergic dermatitis caused by Man-Tan. We would advise consumers to go easy with any product which claims to tan the skin without sunlight.

CONSUMER CONFERENCE

The annual meeting of the Council on Consumer Information, of which the consumer federation is a member, will be held this year in Minneapolis on April 7, 8, and 9. A number of outstanding people are on the program, including Mr. George P. Larrick, Commissioner of the Food and Drug Administration. Several members plan to attend this meeting and will bring back a good deal of information on subjects of interest to all of us.

THE CONSUMER'S FRIEND

An article in the Globe-Democrat of January 3, 1960, described Representative LEONOR K. SULLIVAN of the Missouri Third District as the consumer's friend, and we agree that it is a fitting description. She has been the champion of consumer interests since her election to that office.

In this article Mrs. SULLIVAN gives credit to the consumer federation for introducing her to the work of the Food and Drug Administration shortly after her first election to Congress in 1952. At that time we asked her to talk to us about food and drug laws. She went to the Public Library to study up on the subject. However, she did not feel fully informed on the subject so she turned the meeting back to the consumers and asked to be told what was needed. Since then she has always been ready to listen to any problem affecting any of us as individual consumers.

Scientific Translations in the Field of Public Health

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. DADDARIO. Mr. Speaker, the Secretary of Health, Education, and Welfare held a press conference last week in which he disclosed the extent to which scientific translations in the field of public health were made available to American scientists last year.

Mr. Flemming describes this as a "substantial lowering of the language barrier," and I agree. The Committee on Science and Astronautics, of which I am a member, has looked into this problem and the lag that was allowed to exist for years in the effort to keep abreast of scientific research everywhere in the world and see that American laboratories could obtain necessary information.

I am happy to see that considerable progress is being made, and Mr. Flemming's report bears that out. There are still areas in which more effort is needed. The program to develop Russian, Chinese, and other eastern language materials needs attention. So does the domestic effort to improve the storage and retrieval methods.

Additionally, we must make a serious effort, I believe, to supply the American scientific community with regular critical appraisals of the work being done and quick tabs and abstracts of important work. The Soviet Union, through a master journal of abstracts called the Referaty, is producing a regular encyclopedia on science and technology for their people, in which American accomplishments are abstracted, indexed, cross-indexed and cross-referenced so that the documentary background is available.

We can avoid useless duplication of work and waste of time and money through knowledge of the scientific experimentation going on in laboratories across the world. We have seen many examples of a misuse of money and manpower through unnecessary overclassification in this country where the results of experiments were not made available through proper channels in our defense program, as the Moss committee has ably pointed out. When it becomes a question of scientific knowledge, particularly in areas of basic research, across the world, it is easy to imagine the loss that language barriers suggest.

The total of the Health, Education and Welfare effort is impressive. Mr. Flemming also relays an estimate that it has led to direct communication between Russia and American scientists that could be fruitful. Whether the program is sufficient, or half enough, is not measurable, just as Mr. Flemming notes that the impact of the knowledge learned is not measurable.

What is certain is that such an exchange of knowledge, and the dissemination of scientific and technical information, deserves our full support and energetic surveillance to see that we make use of all the knowledge available to us, rather than operating with blinders in the 20th century.

I submit the text of Mr. Flemming's statement:

STATEMENT BY ARTHUR S. FLEMMING, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

In the relatively short time that the Public Health Service's Russian scientific translation program has been in operation, American scientists in the health field now have ready access to the complete texts of approximately 5,000 Russian scientific papers—totaling 25,000 pages—and about 13,200 abstracts of such papers.

This is a substantial lowering of the language barrier which for many years kept the American scientific community largely ignorant of developments in Soviet health research and it is a valuable adjunct to the scientist-to-scientist exchange program which has been gathering momentum in recent years.

In fact, I am informed, the increasing availability, in English, of Soviet scientific materials has by itself begun to stimulate considerable direct communication between American and Soviet scientists working in the same general fields of medical research.

Since late 1957, when the program got underway, there has been a steady increase in the volume of Russian medical information available to the American scientific

community. During that year translations were made of 27 issues of leading Soviet medical journals totaling 583 scientific papers. In 1958 this number had risen to 42 issues and 1,470 papers. In 1959, 2,300 papers from 84 issues of the 9 leading journals appeared in cover-to-cover translations.

Material provided by the Russian translation program now includes—

Full translations of a number of important Russian monographs on biomedical subjects by Soviet scientists.

Translations of abstracts appearing in the principal Soviet abstract journals. These constitute what the Russian scientific community regards as the most significant of its current literature. Thus, the American scientist is given a ready glimpse, in shortened form, of material which he may wish to read later in full.

Reviews by American scientists, of Russian scientific research accomplishments in health significant fields.

Periodic information on the availability of translated Russian scientific material.

Supporting materials, such as a directory of medical and biological institutes in the Soviet Union, a selected list of references on medical research in the U.S.S.R., a description of the structure and functions of the Academy of Medical Sciences in the U.S.S.R., and a Russian-English medical dictionary.

The impact of this program on the American biomedical sciences is of course not truly measurable at this time. These have been the formative years—a period of assessing the relative values in a large and growing scientific output in the Soviet Union—of selecting that material which seems most representative of the whole body of Russian medical literature.

The Russian translation program administered by the National Institutes of Health is closely coordinated with similar programs in other agencies of the Government concerned with the status of Soviet medical research. The National Science Foundation concentrates on material dealing with the basic physical and biological sciences, exclusive of medicine. The Department of Commerce gives special attention to the applied sciences and technologies. The Atomic Energy Commission limits its coverage essentially to the nuclear sciences.

GOP Dwarfs Democrats in Economic Growth

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

GOP DWARFS DEMOCRATS IN ECONOMIC GROWTH

The mounting roar of the Nation's industries and businesses, turning out an unprecedented amount of production, has drowned out the 1930-ish Democratic voice shouting "depression" and calling for billion-dollar Federal pump primings.

In January, the Federal Reserve Board reported, industrial production hit an alltime high. Production was rated at 169—or 69 percent higher than the 1947–49 era which the Democrats, curiously, are always citing as a good example of economic activity.

At the same time, the Commerce Department reported that in 1959 the gross national product—sum total of the Nation's economic activity—was $479,500 million, also a record in the Nation's history.

The 1959 GNP figure was a whopping 6.9 percent gain over recession year 1959 and was about $100 billion more (in 1959 dollar values) than the Democrats ever managed to encourage, even with the unwelcome spur of the Korean war ($268,100 million better in terms of 1959 versus 1945 dollar values).

The encouraging reports on our "can do" economy clearly forecast an early 1960 surge through the historic goal of a half-trillion-dollar economy. The reports also offer a timely peg from which to review the entire issue of economic growth, the fitful Democratic attempt to nit-pick the greatest U.S. production in the history of the Republic.

Democrats claim the country has to have an annual growth of 3 to 4 percent in GNP. They juggle statistics to prove that this was attained during the Truman administration and then cry, "Why aren't we getting 3 to 4 percent growth now?"

Nothing could be further from the truth. Economic growth under Truman can be ballooned to 4 percent annually only by selecting his good years and ignoring his bad years, the most outrageous type of deliberate distortion.

By selecting some years and ignoring others in a continuous record, of course, you can "prove" anything which your conscience will permit. The facts on comparative economic growth under the Democrats and under the Republicans are as follows:

In the 8 years of the Truman administration, GNP increased $32.7 billion (in 1959–value dollars) for an overall increase of 8.9 percent, an annual average growth rate of 1.1 percent.

In the 7 Republican years since 1952, GNP has shot up a total of $84.5 billion (again in 1959-value dollars) for an overall gain of 20.2 percent, an annual average growth rate of 2.9 percent. This is almost three times more than Truman's and close to the Democratic "ideal" rate.

Most of what economic gains the Democratic administration was able to produce came from the industrial demands of the Korean war. In Truman's peacetime years, GNP fell back in 2 years, inched ahead less than 1 percent in a third and gained modestly in the other.

In the peacetime years since 1953, GNP has gained in 4 years, lost a bit of ground in just 2 years.

Economic growth in the United States, 1945–59

[All dollars in terms of 1959 values]

Year	GNP (billions)	Percent change over previous year
1945	$350.9	−1.8
1946	316.0	−12.2
1947	315.7	−.1
1948	327.9	+3.9
1949	328.2	+.09
1950	356.2	+8.5
1951	385.0	+8.1
1952	399.0	+3.6
Total gains	32.7	[1] 8.9
1953	417.1	+4.5
1954	408.8	−2.0
1955	441.5	+8.0
1956	450.9	+2.1
1957	458.9	+1.8
1958	448.6	−2.2
1959	479.5	+6.9
Total gains	84.5	[2] 20.2

[1] 1.1 percent annual average.
[2] 2.9 percent annual average.

NOTE.—According to the Democratic-dominated Joint Economic Committee of the Congress, the historic annual rate of U.S. growth for the 1919–59 period is 2.9 percent—exactly what we have enjoyed since 1953 and about three times greater than the Truman administration achieved.

Connally Amendment Protects Us

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. ASHMORE. Mr. Speaker, I ask unanimous consent to have printed in the RECORD an editorial entitled "Connally Amendment Protects Us."

This editorial concisely sets forth sound reasons why the United States should not reverse its present stand regarding the International Court of Justice:

[From the Greenville News, Feb. 9, 1960]

CONNALLY AMENDMENT PROTECTS US

In an administration that is markedly conservative in other respects, President Eisenhower and his colleagues have shown a strange attitude toward this Nation's relations with the International Court of Justice.

For some time now they have been pushing a proposal to remove the Court's limited jurisdiction. In doing so they have allied themselves with the most liberal of the "one worlders" and have parted drastically with their normal allies among conservatives.

This awkward practical position is rendered even more difficult to understand in principle. There is practically no sound argument for reversing our present stand and many good reasons for maintaining it.

At stake is the so-called Connally amendment to the Senate resolution adopted in 1946 which joined the United States with the Court.

Named for the then chairman of the Senate Foreign Relations Committee, Senator Tom Connally, of Texas, the amendment limited the scope of the Court's jurisdiction. As originally phrased, the Court could not consider matters essentially within the domestic jurisdiction of the United States, but Senator Connally went one step further and provided that the United States itself would be the judge of what was and what was not "within the domestic jurisdiction."

The reason for adopting the Connally amendment was obvious. Many Communist and "neutral" nations are also members of the court and to place within their hands the judgment of questions vital to the security and well-being of this Nation was unthinkable. The amendment received bipartisan support and was adopted by a wide margin.

There has been a running attack on the reservation since its adoption. President Eisenhower has joined his influence with the opposition and Senator HUBERT HUMPHREY has sponsored a resolution aimed at its repeal. According to latest reports the chances that the HUMPHREY resolution will be adopted by the Senate are good.

A variety of arguments are cited against the limitation. It is pointed out that several nations, including France and England, have given up their right to determine their own domestic jurisdiction, and that the proviso can be used to limit a country's ability to take other nations before the Court.

It is also said that the Court itself admits it cannot invade a nation's domestic affairs and can be trusted to observe that obligation. And finally, it is pointed out that enforcement of the Court's decisions must come from the Security Council of the United Nations where the United States still has the power of veto.

Much of all this is, it seems to us, self-defeating. Either the Connally amendment

means something or it doesn't. If it doesn't, if similar restraints on the Court's jurisdiction are already written in the charter, then what difference does it make whether Senator Connally's words remain there to? It stretches credulity to the breaking point to assert that the Court will be made a more meaningful instrument of law by the erasure of six simple words whose force and effect is duplicated elsewhere.

If, on the other hand, it does mean something, if it is the sole guarantee of protection for U.S. internal affairs, then it should never be removed. National sovereignty and the right of every nation to conduct its own domestic affairs has been a matter of international law for centuries, violated only by warfare. Is the United States now prepared to embark on a program of abandoning that historic right bit by bit?

That is certainly what we would be exposing ourselves to if the Senate reverses itself on the Connally amendment. It is all well and good to say the Court has never interfered with domestic matters in the past but once the safeguard is dropped, who can predict the future?

We hope the Senate will save Mr. Eisenhower from this drastic mistake. The International Court of Justice is still young and needs much experience before such vast powers are entrusted to it. The United States and its system of government are much too precious to be subjected to so risky a gamble.

Resolution by Knights of Lithuania, 29th Council of Newark, N.J.

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. RODINO. Mr. Speaker, just 9 days ago we commemorated the 42d anniversary of the independence of Lithuania. At that time I joined a host of others here in the House who paid tribute to the courage and invincible will of this freedom-loving Nation.

I have recently received a resolution from the 29th Council of the Knights of Lithuania, which fervently expresses the hopes and rightful aspirations of the Lithuanian people, and which calls upon the United States to do all in its power so that those aspirations may one day be fulfilled. I should like to insert this resolution into the RECORD as an eloquent footnote to our earlier tribute:

RESOLUTION ADOPTED BY THE KNIGHTS OF LITHUANIA, 29TH COUNCIL OF NEWARK, N.J.

On this 42d anniversary of Lithuania Independence we assembled at a meeting in St. George's Hall, Newark, N.J., and the following resolution was adopted:

Whereas the Republic of Lithuania, a small freedom-loving nation, ardently desires to exercise her solemn right of self-government and has proven that she is capable of self-rule by remarkable progress made in all fields of endeavor during the past years in which she enjoyed independence (1253–1795 and particularly 1918–1939); and

Whereas the Government of the United States since 1940 has steadfastly refused to recognize de jure the unjust absorption of Lithuania with the Soviet orbit: Now, therefore, be it

Resolved, That the Government of the United States continue to maintain and adhere to its present policy of recognizing the de jure independence of Lithuania despite occupation by Soviet Russia; and be it further

Resolved, That Soviet Russia, having no sovereign rights over Lithuania or her territory, be forced to leave Lithuania immediately, thus restoring freedom to the nation, and to return at once to Lithuania all Lithuanians people now exiled in Siberia and other foreign lands; and be it further

Resolved, That the Republic of Lithuania be duly admitted and fully approved as a full-fledged member of the United Nations and that her appointed representatives be allowed to maintain with full privileges the status of duly-elected delegates of that organization; and be it further

Resolved, That the U.S. Government work through the United Nations by raising the problem of enslavement of Lithuania and by demanding the withdrawal of Soviet troops from Lithuania as well as from other subjugated European countries.

EVA M. TRECIOKAS,
Chairlady of Lithuanian affairs.
FRANK VASKAS,
Secretary.

U.S. Advisory Aid to Vienna

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. COFFIN. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the New York Times on February 8, 1960. This article is a straight, factual report on the message which Chancellor Julius Raab recently made to the people of Austria on the contribution the U. S. technical assistance program has made to their economic well-being:

U.S. ADVISORY AID TO VIENNA HAILED—CHANCELLOR CREDITS MUCH OF AUSTRIA'S DEVELOPMENT TO TECHNICAL ASSISTANCE

(By M. S. Handler)

VIENNA, February 7.—Chancellor Julius Raab reported to the Austrian people tonight on the contributions of the U.S. technical assistance program to Austrian industry since 1949.

Last week the chancellor informed his cabinet that the program had ended and that he would convey his thanks to the U.S. Government for its technical aid to Austria.

Herr Raab made his report to the people tonight in his regular Sunday broadcast.

He left no doubt in the minds of his listeners that Austria owed much of her strong competitive position in the world and much of her internal economic development since 1949 to American technical assistance.

ONE THOUSAND TWO HUNDRED AND FIFTY EXPERTS VISITED UNITED STATES

A total of 1,250 Austrian experts visited the United States under the program in the last 10 years to acquaint themselves with the latest methods of technology, industrial and commercial organization and public administration.

Many of them, the chancellor said, were able to introduce these methods in Austria. Thereby, he observed, the country's development and individual enterprises profited.

He cited a clothing factory in Vienna that was able to quadruple its production, reduce its costs by 30 percent and increase wages as a result of an expert's trip to New York.

He told of a construction company that increased its annual turnover from 6 million schillings ($240,000) to 34 million schillings ($1,310,000) by more efficient use of machinery.

He mentioned that a road-paving company was able to reduce costs by $20,000 on a 3-mile paving job.

The chancellor said similar experiences were reported in the iron and steel industries after experts had visited the United States.

AUSTRIANS SET UP PROGRAM

These were the examples cited by Herr Raab, but in a larger sense the American technical assistance program enabled the Austrians to establish their own program for the introduction of modern industrial methods.

The chancellor told the people that under the program research institutes and seminars had been established to disseminate knowledge of modern methods in industry, business and public administration.

These included institutes for modern industrial design, price studies, machine construction, industrial management, modern accounting and business administration.

Herr Raab said trade union leaders who had visited American factories had returned with knowledge of how to increase industrial productivity, improve labor-management relations and, on the whole, improve workers' psychology on the job.

Particularly valuable, he said, were the lessons learned in the United States on how to implant new industries in backward areas of the country.

The chancellor emphasized that as a result of all these improvements Austria was in a position to help the underdeveloped countries with which she traded.

A Unionist's Program To Meet Inflationary Threat

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article written by Mr. Solomon Barkin, research director of the Textile Workers Union of America:

A UNIONIST'S PROGRAM TO MEET INFLATIONARY THREAT

(By Solomon Barkin)

The administration and the business community have kept stirring up interest in and concern with the problem of inflation at a time when prices have been stable for more than a year. They initiated this debate in late spring of 1958, when every forecast, including those issued by governmental agencies, indicated such price stability will be maintained. The intensity of the controversy has currently increased though evidence points to the probability that price levels will not change much in the immediate months ahead.

The threat of inflation has not been and is not likely to be so intense in the near future as to justify the deliberate promotion of a national hysteria. A positive program of action such as we shall unfold would have accomplished more. But the disseminators

of the message of woe have been more intent upon generating this deep concern than in arresting the real pressures for inflation.

INFLATION DEBATE POLITICALLY INSPIRED

The heat of the declamations can only be explained by motives other than the anxiety over the immediate changes in the level of prices. If one were to conjecture on these reasons in terms of the people emphasizing this problem one would be justified in ascribing them to political and propaganda purposes. The administration apparently undertook the campaign to fight inflation primarily to discourage a bold public expenditures program being considered by Congress and, more recently, to pressure trade unions to accept lower wage settlements than they had publicly announced. It also feared the consequences of its handling the financing of the Federal budget deficit by traditional means, which it would not think of modifying.

The business community must have had similar purposes plus the added desire to divert attention from the charges directed against its responsibility for pushing up prices. Specialized business sectors such as insurance companies and banks which have actively agitated the public on this problem have had some special purposes, such as to rationalize high interest rates and to minimize the possibilities of the blame being placed on their policies and practices.

REDUCTION IN UNEMPLOYMENT AND HIGH RATE OF GROWTH PRESENT CHALLENGES

While this debate has been going on, trade unions and political liberals have focused attention on the high levels of unemployment and the slowness of the rate of economic growth. They have sought to keep the public's eye focused on the fact that America's low rate of growth has dropped below the 3 percent level which was contrasted with the potential for an annual growth rate of 5 percent and Russia's program for an 8 percent annual rate economic expansion.

Along with the lower rate of growth has come a high level of unemployment. The labor groups have protested the continued large volume of unemployment and could find little satisfaction in the reduction of the number to 3.6 million. Behind these figures they see large pools of unemployed in the distressed urban areas and widespread underemployment among the more than 1¼ million low-income families. At the time in April when we registered this sharp drop in the level of total unemployment, there were still labor market areas with rates of unemployment above 16 percent. More than 267 labor markets had 6 percent or more unemployment. In some industries such as construction, the rate was 11.3 percent; mining, 9.2 percent; automobile manufacturing, 8.2 percent, and it was equally high in textiles. A number of States could still report unemployment rates in excess of 6 percent.

While unemployment has been so pervasive, trade unionists and political liberals could not possibly concentrate on the issues of inflation. They continued, therefore, to press for Federal legislation to correct the obvious defects in our economy. They perceived in the possible threat of rising prices the excessive use of economic power by big business interests and professional groups, inadequate expansion or control of our bottleneck industries, insufficient stimulation of productivity in our service industries, inflationary monetary policies which discourage growth, inequitable tax systems with countless loopholes for the higher income groups, and an outmoded agricultural pricing policy which maintains prices high and surpluses excessive and fails to provide a living to millions of farm families. Legislation designed to meet these problems appeared to them vital to deal with inflation.

PRICE STRUCTURE DETERMINED BY MARKET OR PRICE ADMINISTRATORS

In considering the trade union's role in our market economy one must recognize that its function is that of stimulating or conditioning but not that of controlling management's behavior. It is the latter which sets prices, fixes production policies and determines the financial, product, research and expansion programs for the enterprise. This truth is obvious in unorganized industry and applicable widely to unionized ones. Moreover, with the share of American industry covered by union contracts stabilized if not decreasing, the union's influence upon the Nation's wage movements and levels has become less critical. It has been exaggerated by its opponents for agitational purposes.

Trade unions, moreover, do not set wages unilaterally; they offer proposals for negotiation. Historically it has been management's responsibility to obtain a bargain, one which most nearly is adjusted to the economics of the particular industry or enterprise. The function of negotiations is to reach such an understanding and, by and large, the American people have approved the results.

UNION ECONOMIC PROPOSALS CONDITIONED BY INDUSTRY'S PROSPERITY

Insofar as trade-union proposals are concerned, their objectives have been approved and widely accepted by industry and society. Actually, the annual disputes on wage issues are focused on a relatively limited range of differences despite the public furor raised by the parties and commentators. Probably the most significant goal is the acceptance of the principle of annual wage increases commensurate with the annual rise in national productivity. This approach was incorporated in the formula proposed by the General Motors Corp. in 1948 as a part of its demand for a long-term contract and is now widely observed. Our national wage movement broadly shows this wide acceptance.

The second goal is the cost-of-living escalator formula to protect the workers' real wage. This adjustment is now quite generally followed.

The third is the principle of the annual wage which has unfortunately been converted, thanks to the negotiations at the Ford Motor Co., into a supplementary unemployment benefit. The advantages and deficiencies of this program have been brought to light in the current recession in that the limitation of the funds forced reductions and curtailment in benefits. These benefits have proved helpful to the unemployed but are no adequate substitute for the annual wage. Unions have, however, also sought to realize the annual wage by proposing more holidays and longer vacations with pay, not only for adequate recuperation but also for the maintenance of earnings during such periods.

The fourth is the transfer of the personal risks of employment to the industry. Both through legislation and collective bargaining, unions have negotiated for insurance programs to be financed by industry against risks of ill health, such as illness, medical and hospital care and disability, old age and permanent disability, unemployment and death.

A fifth goal has been the equalization of benefits among all classes of employees so that the wage earner might enjoy the fringe and employment benefits received by other employees though, of course, the level would be adjusted in some instances to the differences in earnings.

The continuing promotion of these principles has been a constructive force in this country. It has made industry aware of the need of continuing research in ways of higher productivity. Management has, therefore, institutionalized its research for labor- and capital-saving techniques to offset these advances. Part of the progress in productivity is attributable to management's acceptance of this responsibility. Concurrently, trade unions have also pressed for the implementation of the principles of full employment incorporated in the act of 1946.

Inasmuch as these objectives have been widely recognized in American industry, there has been a simultaneous improvement in workers' attitudes to technical change, a critical factor in America's progress. Never before in the history of any nation has there been such widespread acquiescence to innovations and an acceptance of the conviction that they will rebound to the benefit of the people themselves. Industrial change has been accepted rather than resisted.

MAJOR ISSUE IN NEGOTIATIONS IS RATE OF WORKER PARTICIPATION IN INDUSTRY'S PROFITS

The acceptance of these principles by American industry and the public has truly narrowed the range of debate. The remaining primary source of contention is the degree to which the workers shall participate in the especially high profits in a particular industry, and the rate at which the above principles shall be implemented.

Union wage proposals in seeking to achieve the goals have primarily derived from the state of prosperity of the companies and industries with which they deal. In competitive industries such as textiles, garments, shoes and other soft goods, wage and fringe benefits have lagged behind those in the more concentrated branches of the hard-goods manufacturing industries. Competition in the former has forced businessmen to pass on the benefits of high productivity and lower costs to the consumer. Primarily in periods of business upturn, when employers are enjoying favorable conditions, have unions been able to obtain higher benefits for workers. In less active periods they have been constrained to wait or secure modest advances. To illustrate this experience we may observe the trends as to wages, labor costs and prices in the nondurable goods industries which include many of the above competitive industries. Average hourly earnings rose by 66 percent from 1947 through 1958, unit labor costs by 9 percent and wholesale prices by 11 percent.

In contrast to the above has been the experience in the oligopolistically structured industries in which there are few competitors and where prices are administered relatively freely by employers in accordance with fixed price formulas and profit targets such as are employed by the steel industry. Employers have invariably been able to press their prices upward beyond the increase in labor costs. Witness of this trend is the fact that in the durable goods industries as a whole, average hourly earnings rose by 77 per cent from 1947 through 1958, unit labor costs by 13 percent and wholesale prices by 55 percent. The excessively high profits enjoyed by these industries remain a constant stimulus to ambitious union wage demands.

The present steel dispute is partly centered about the industry's determination to fix its prices high enough to assure low break-even points, such as about 35 percent capacity and a return of 20 percent on sales before taxes at 80 percent of capacity, and to deny workers a share in the profits they have earned. Such a price policy is currently netting the companies inordinately high profits as operations are exceeding 90 percent of capacity. The trade unions have called for workers to participate in this bounty. Part of the demands would no doubt have been scaled down if the companies had followed the policy laid out in

an editorial of Life magazine on May 18, 1959, which read as follows:

"Why don't steel companies reallocate their expected profits to make room, not for a wage boost, and not just for no increase in prices, but for an actual price cut?

"This would do more to halt inflation than any other course. * * * Steel productivity is way up. It is an extremely appropriate moment for steel prices to reflect this by coming down."

The major issue therefore presently confronting the parties in the collective bargaining process is how to reconcile the price policies followed by the large oligopolistic companies with the realities of the negotiations. So long as these larger corporations and industries insist upon the pursuance of present practices which insure continuing price rises, minimum recognition of consumer interests, and extraordinary profits, particularly during periods of high operations, there will be a continuing irreconcilable conflict between unions and management. While the competitive system is unable to enforce or limit returns to moderate levels in these industries, there must be other procedures for effecting this same result. While unusually high profits prevail they will tend to incite workers to ask for comparatively higher benefits for themselves over and above those laid down in the preceding set of goals.

The very trade-unions' insistence that workers share in this bounty has been a contribution to the discussion of public policy concerning the supervision of oligopolistic companies and their practices. Until this group is brought under careful periodic surveillance, unions will continue to force the issue of excessive profits upon the American people. The industrial dispute is therefore in part the byproduct of the Nation's lassitude in handling the overall problem of the pricing, financing and production policies of big business.

TECHNIQUES FOR MODERATING PROFIT LEVELS IN OLIGOPOLISTIC INDUSTRIES

Many different approaches have been suggested as appropriate for effectively forcing such changes in pricing policies. One proposal calls for the regular review of the proposed price increases by a Federal Government agency which shall subsequently issue its findings on the appropriateness of the boost and the soundness of the company's principles in price determination. If there are to be administered prices, the guides followed by these companies must be subjected to public scrutiny as a further restraint on prices in view of the absence of an effective market mechanism. This proposal is being considered by Congressional committees and is worthy of adoption for experimental purposes to determine whether it can truly restrain excessively high prices.

Anther proposal has been for annual labor-management conferences to consider these problems. These meetings would necessarily deal with the issues of wages, prices, productivity, and profits. The assumption is that if such meetings are regularly held on a broad national basis, management might overcome its reluctance to discuss business policy with union leaders. They who have fought most vigorously against union intervention in the price area as relates to the individual company may show a greater willingness to discuss these issues for American business as a whole. Until there is such an agreement for discussion on these policies and progress made toward reconciling these differences and views, it is unlikely that the gap between union and business views on these problems will be narrowed.

The issues with which these groups would have to deal relate to questions raised primarily by the behavior of the price-administered, oligopolistic industries. Is it appropriate to fix prices in terms of a set profit target for a given level of operations? How low may a breakeven point decline without violating the public interest? Is 35 percent too low? Shall companies maintain prices high enough to finance a substantial part or all of their expansion? Shall prices be fixed on the basis of a replacement cost formula for capital? How shall the accounting system be best designed to reflect the returns to management, investor, employee, and supplier? How shall they be reported to the bargaining representatives?

The focal point of any program for increasing labor responsibility in negotiations is the determination as to how and who is to review and moderate the prices and the profit levels of the companies only loosely controlled by the competitive forces. So long as the public makes no effort to intercede to assure more moderate prices and profits in these fields, trade unions will have to relate their bargaining proposals to the generous returns enjoyed by these employers. Union proposals are derived from the economic state of the employers' business and will continue to be so in our free economy. Exhortation directed at unions appears pointless since they are merely reacting to the realities of the corporate returns. Should the latter be made less inflationary, unions will trim their own proposals accordingly.

This review has underscored the complete absence of realism in the charge that higher labor rates are responsible for the rise in prices, the source of the cost-push. The union proposals are generally derived from the state of prosperity of the individual enterprise or industry. In securing their negotiated gains the unions do raise the level of wage rates, but the later determination to boost prices to offset or improve on the increase in order to maintain or broaden existing margins is a decision in which the union does not participate in any wise. Moreover, it is this subsequent price decision which starts the new cycle of extraordinary profits, particularly in periods of high operations. By breaking this continuing upward spiral by forcing a lower margin, the public can forestall the inflationary impact of these movements. If the public prefers, it can intercede prior to the wage negotiations by securing the reduction in prices as suggested by Life magazine and thereby tending to moderate the union proposals.

SYSTEM OF SPECIFIC CONTROLS URGED BY UNIONISTS

But no program directed solely at moderating these prices set primarily by the large oligopolistic corporations is enough to assure more stable general price levels. While the products of these companies flow through most channels of commerce and into every activity, there are other price complexes which are equally crucial to the realization of general stability. No single approach through monetary control or review of oligopolistic administered prices will be sufficient to restrain rising prices. These programs must be supplemented by a list of other techniques.

We shall enumerate several policies for the purpose of indicating the nature and scope of these additional proposals for restraining price rises. Trade-union interest and concern are not expressed solely through the measures discussed around the bargaining table; unions actively participate in the debate on public issues and in hearings before legislative and administrative bodies and in impressing legislators with the need of adopting measures directed to these ends. The trade-union program is described adequately only by its totality of proposals.

A. Administered Government prices

A substantial proportion of American price complexes is determined by regulatory bodies, governmental agencies or through negotiations with private business enterprises. Trade unions have appeared before many bodies to protest their formulas which have led to unending rate increases for public utilities. In New York City the trade unions aggresively fought the proposals for higher fares on the transportation system. At the Federal level, they have objected to the luscious prices paid to contractors of military projects. Individual unionists have called for the removal of the restraints on competition imposed in some areas such as trucking. Others have endorsed the proposal of a consumers' counsel to represent the consumer interest in all public affairs.

B. Agriculture prices

The present farm price programs have resulted in high prices. The consumer has had to pay them and in addition, as taxpayers, they have had to finance the costly benefits paid to the farmers. The trade-union movement has long supported the principle of the Brannan plan which favored financial support to the farm families rather than support payments to the large growers. In the field of cotton and raw wool the TWUA has advocated a one-price system looking for an open market price for these crops with appropriate payments to the small farmers. The result would be cheaper fabrics for the consumer and industry.

C. Services

The cost of services have been stepped up at a much higher rate than any other section of the consumers' budget. The prices of materials have risen because they are bought from the oligopolistic industries. The cost of labor services have also climbed both for the low-paid service employees and the professionals who have exploited their improved bargaining position to hike their fees.

Productivity has not been measurably improved for these services, therefore necessitating a higher price level. The writer has proposed the formation of a National Productivity Center for the Services to offset these increases in cost to achieve a greater stability in prices.

D. Monetary policy

Current monetary policy has proved inadequate to restrain inflationary pressures or to stimulate recovery. The present system of control reaches primarily into the commercial banking field. It cannot control consumer credit or the credit and investment policies of nonbanking financial institutions such as life insurance companies, savings and loan associations, sales and commercial finance companies, mutual savings banks, private pension funds, credit unions, other consumer and mortgage finance agencies, and the liquid assets of corporations. If monetary policy is to be more effective the central coordinating agency to control money credit and debt policy must be able to reach all agencies as well as the investment policies of these organizations. Moreover, such an agency would be empowered to lower interest rates in areas which have to be stimulated even during periods of tight money.

The writer also believes that if we are to have an effective system of control of inflation, Federal agencies should also have the authority for allocating key materials such as steel, to restrain accumulated demands and to assure balanced use of scarce resources.

The high interest rates paid by the Government for loans is another serious cause for higher prices. The Federal Reserve System has relied on the variations in interest rates and has not used its power to increase reserve requirements to control the supply of money and credit, thereby accentuating the pressure for higher interest rates. This policy needs careful review, if not reversal. Moreover, the practice of the Federal Government to pay high interest rates on funds which it borrows from commercial banks which utilize the Government's power to create credit is questionable, particularly

since they perform no service for these payments. The Federal Government must consider newer methods of financing which will lower the costs of such loans.

E. Fiscal policy

If fiscal policy is to serve as a more effective stabilizer and contribute to more stable prices, it is not enough to insist upon a balanced budget. As Federal expenditures rise, the country should secure the maximum revenues from the current rate structure. The elimination of the tax loopholes such as the preferential treatment of dividend income, excessive liberality in the handling of capital gains, the unwarranted depletion allowance are necessary to achieve greater equity and income.

The Federal Government could make a significant contribution to moderating the rise of raw material prices affected by international market conditions by selling its stockpile at appropriate times. The release of the copper supply would currently keep the price of copper in check. A more liberal quota on oil imports would inhibit price increases for gasoline and oil.

The proposed fair-trade bill adopted by the House Commerce Committee, opposed by the Federal agencies, labor and consumers, would do more to increase prices than most of the causes currently discussed.

A higher volume of foreign trade has been suggested as the means of counteracting the rising price levels in this country. While the writer has advocated a safeguarded level of national production for basic American industries, he has always associated this proposal with controls which would prevent any protective system from forcing up prices in this country.

CONCLUSION

The key groups determining the course of the price levels in this country are management, industry, and the Government. In a broad range of areas they administer prices rather than follow the levels developed through impersonal market forces. Being deliberately developed to attain specific end results, they should be subject to review by public agencies and the Congress of the United States. Trade-union wage and benefit aims are now commonly accepted as equitable and reasonable. The primary source of controversy stems from the differences existing between management and trade unions as to the workers' share of the excessive profits garnered by their particular industries. These high earnings result from the price policies followed by these oligopolistic industries. To minimize the intensity of the current conflict in this area, it would be desirable to moderate the price goals and profit targets adopted by these industries and secure lower prices in them. The most reasonable current proposal for effecting this end is the administrative review of proposed increases.

To assure a stable price level these systems should be associated with additional controls in affecting other price complexes and monetary and fiscal policies. Together these programs can help underwrite higher national productivity, more price stability and a more uniform rate of growth.

Changing Trends in Trade Patterns

REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. KNOX. Mr. Speaker, the record shows that the policy of persistently chopping away at U.S. tariffs has achieved what its original sponsors in the first New Deal administration set out to do; namely, to increase American purchases of foreign products.

Obviously, a growing nation needs more goods. So it is not surprising that our imports have advanced over the years.

However, if we were simply buying abroad more of those products which we cannot provide for ourselves in our home economy, we would not be experiencing grave distress in many domestic industries. The fact is, we are importing more and more products that compete with our own output. Hence, the import problems of American industries and jobholders.

The record confirms this dangerous trend in our international commerce. In 1959, our imports of dutiable goods exceeded imports of duty-free products by nearly $3.5 billion. In total imports valued at $15 billion—a record high level—dutiable products accounted for $9.2 billion, while duty-free imports measured $5.8 billion.

Moreover, this was only the fourth time since 1910 that dutiable imports exceeded duty-free imports. From 1910 to 1956, the United States always bought more duty-free, or noncompetitive, goods from abroad than dutiable, or competitive, goods.

Then, in 1956, the situation reversed. Dutiable imports edged ahead of duty-free imports by less than $50 million out of total imports of $12.5 billion. In 1957, the gap widened to nearly $900 million. It expanded to more than $2.5 billion in 1958, and then to almost $3.5 billion last year.

Clearly, as the record shows, the emphasis in imports is on competitive products. In 1959, less than 39 cents out of every American dollar spent for foreign goods were allocated to duty-free imports. This is the lowest ratio since 1890, when only 33 percent of our total imports were free of duty.

Only twice in the 9 years since 1951 has the United States spent less than $5.8 billion for duty-free products. In most of these year our duty-free purchases surpassed $6 billion.

Yet, in the same period, imports of dutiable, or competitive, products have nearly doubled, from $4.8 billion in 1951 to $9.2 billion in 1959.

Another conclusive sign of this trend is the fact that although our imports have risen dramatically in the last couple of years, almost all of the net increase has been absorbed by our highly industrialized trading partners in Western Europe and Japan, while lesser developed nations in Asia, Africa, and South America have shared little, if at all, in the American import boom.

This becomes particularly distressing when we stop to consider that these same lesser developed countries, some of them still in the early days of independence and most of them urgently hunting markets for their raw materials, are the primary targets of the Soviet economic offensive.

This ambitious effort has shoved the Kremlin's sphere of influence virtually to the doorstep of the United States. Clear-cut Soviet designs for economic penetration of needy countries should be evident to anyone watching the busy routes of the Kremlin's hucksters. Energetic efforts to peddle Communist goods—and propaganda—are underway in many key areas in the nonindustrial free world, including Latin America.

If it is true, as many claim, that foreign trade policy is inexorably linked to broad foreign policy, then surely it is time to reassess our present trading patterns.

The record shows that the United States, the world's greatest trading nation, is currently devoting most of its attention in foreign commerce to swapping manufactured products with its industrial allies—in other words, the countries that least need our help—while offering relatively few new opportunities to the lesser developed nations that need help most.

Statement of William McChesney Martin, Jr., Chairman, Board of Governors of the Federal Reserve System, Before the Joint Economic Committee, February 2, 1960

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues a statement by Mr. William McChesney Martin, Jr., Chairman, Board of Governors of the Federal Reserve System, before the Joint Economic Committee on February 2, 1960:

MONETARY POLICY AND ECONOMIC GROWTH

It seems to me that perhaps the most helpful contribution I can provide to your committee's annual review of the President's Economic Report is to make some supplementary comments on financial and monetary developments over the last year.

Our financial environment changes constantly, as this committee knows well, but some of the changes that took place last year were dramatic indeed.

During 1959, credit expanded by $60 billion in all—one-third more than the previous peacetime record. Mortagage debt, most of it for housing, increased by a record $19 billion. Consumer credit outstanding rose about $6.5 billion, equaling the previous record of 1955. New borrowing by State and local governments continued in near-record volume, and new borrowing by the Federal Government exceeded all peacetime records. At the end of the year public and private debt was at the highest level in history.

The American economy and the American people would be in a very different and a vastly worse position today if this enormous expansion of credit had been financed by the large-scale creation of additional funds by the banking system and a consequent rapid and inflationary increase in the money supply.

Fortunately, that danger was averted—in 1959 at least. To date, the task of supplying this huge demand for credit without

severe inflationary consequences has been accomplished chiefly by the sound and democratic process of letting those who would borrow provide those who would save with an inducement to risk voluntarily the loan of their savings. The role of the banking system, which obviously is influenced greatly by Federal Reserve policy and operations, has been held to that of an intermediary between borrowers and savers.

Let me illustrate the working of this process by referring briefly to the events of 1959 as they are reflected in the Federal Reserve's flow-of-funds accounts, a body of quarterly published data developed in part as an outgrowth of investigations set in motion by one of your subcommittees into the need for improved statistical information.

The commercial banks, it is true, did expand their loans in 1959 by almost $12 billion—thereby equaling the previous record of 1955. The important thing for the economy, however, is that the banks raised the funds for this lending in large part by selling Government securities they owned to the nonbank public.

Thus, the banks performed an intermediary service by obtaining funds from savers, to whom they transferred investment securities, and by passing the funds on to others who had a need to borrow. This flow of funds from savers to banks to borrowers did much to assure that the need for credit was met without a dangerous increase in the money supply. It did, however, bring about an increase in the turnover or rate of use of the existing money supply and, by so doing, produced much the same economic and financial effect as would have been produced by a modest increase in the money supply without the accompaniment of a faster rate of use.

The activity last year of the nonbank public—meaning for the most part consumers and business concerns—in supplying borrowers with funds through the process of investment was truly extraordinary, and it did not stop with the purchase of Government securities sold by the banking system. The upswing in this activity shows up strikingly in the flow-of-funds data that I mentioned earlier. There, it appears that consumer and business investors increased the net amount of their purchases made directly in securities markets from about $4 billion in 1958 to almost $20 billion in 1959—a jump of 400 percent in a single year.

The efficient and economically healthy flow of funds from savers to borrowers, directly and through intermediaries, did not come about without a price. The price was, of course, a rise in interest rates. These rates, representing a penalty to those who use someone else's money and a reward to those who save and risk their funds in loans and investments, rose in some instances to the highest levels in 3 decades. What happened is readily apparent: The pressure of demand for funds arising from a combination of forces—a large Federal budget deficit, high residential construction activity, rising expenditures for consumer durables and for inventories and to some extent fixed capital, plus the continued high level of expenditures by State and local governments on community facilities—converged to bring about a competition to borrow that drove interest rates upward; the rise in interest rates, in turn, operated to induce the savings and investment necessary to supply borrowing demands. In summary, the direct effect of the greatly enlarged credit demand was to bid up interest rates generally and to cause some changes in the relationship of interest rates among the different credit markets; the resultant effect was to draw more funds into the credit market and to shift some funds from accustomed uses. Let me add something here to what I said about the banking system's service in 1959 as an intermediary between the saving public and the borrowing public. On the one hand, the saving public, besides purchasing a large volume of securities as I described, increased their time deposits by about $1.5 billion. On the other hand, the borrowing public increased the amount of their loans obtained from commercial banks by nearly $12 billion. To raise funds to meet the heavy demands on them for loans, the commercial banks sold about $8 billion of their Government security holdings in the open market, while the nonbank public, as stated earlier, was increasing their purchases in that market. Thus the banks, in effect, drew out of the market, from individuals and corporations not engaged in lending, the funds to meet the specialized credit demands of borrowers—as, for instance, many small business concerns—who could not themselves have raised funds in the market because their needs were unsuitable for general market participation.

The vital role that the Federal securities market plays as a clearing house for credit flows is apparent in the circumstances described. In 1959, this role was much larger than in other recent years. Federal net borrowing of $11 billion and bank sales of Governments of nearly $8 billion required absorption of around $18 billion in Federal securities by other investors. This, taking into consideration that the Treasury was having to raise new funds while shifts were taking place in Government security ownership, goes a long way toward explaining the rise in both long- and short-term rates that we experienced during the year. It is also illuminating evidence of the responsiveness of nonbank investors to attractive interest yields.

The relation of Federal Reserve policy to changes in interest rates is often misunderstood. Federal Reserve operations to release or absorb bank reserves unquestionably influence short-term and also long-term interest rates, but the extent of this influence is easily exaggerated. Monetary policy is effective only so long as it works in general consonance with the economic realities underlying the situation. These realities include the basic demands for funds, whether to meet seasonal needs, other short-run needs, or for capital formation, and the basic supply of funds through saving. Federal Reserve actions cannot for long enforce rates of interest on the market that are either above or below the rates that maintain a balance between saving and investment.

Changes in the rate of monetary growth can represent only a very small part of the total flow of funds through credit markets. If the rate of monetary growth were raised with the specific objective of adding to the supply of funds in an attempt to keep interest rates down, the additional dollars in the spending stream would certainly work to raise average prices. The process of monetary inflation is widely understood by both savers and borrowers. Such action would generate expectations of further inflation on the part of both groups. The incentives of the marketplace, present and prospective, would unquestionably tend to increase borrowing and discourage saving and in all likelihood rates would increase.

In the longer run, the way that monetary policy can contribute to a lower level of interest rates is through its role in maintaining a stable value for the dollar. It is only in an environment of confidence in such stability that savings will accumulate and credit will flow in an orderly way and in expanding volume. Efforts to maintain an artificial level of interest rates, either too high or too low, can only lead to cumulative financial disequilibrium, first distorting and then disrupting healthy economic growth.

Whether monetary policy as administered by the Federal Reserve System has been, at particular times, too easy or too tight is a matter of judgment. At one time or another, we have no doubt erred in some degree in each direction. But the System has consistently endeavored to cultivate confidence in the stability of the dollar—by combating deflationary tendencies in periods of slack and inflationary pressures in periods when resources were being intensively utilized.

I want to emphasize again that the Federal Reserve System wants low and not high interest rates; it wants as low a level of interest rates as is consonant with sufficient savings to finance the investment necessary for desirable and rapid economic growth. We cannot say that a steadily swelling stream of savings and investment is the only essential for satisfactory growth, but, especially in a country where the natural resources are already highly developed, it is a vital element.

RECORD OF ECONOMIC GROWTH

The subject of economic growth has received exhaustive study by your Committee during the past year. It is an important subject because only growth can produce the substance with which to achieve our individual and national aspirations. At the same time, economic growth is a confusing subject because it means so many different things to different people. Some seek growth primarily as a requisite of effective defense against potential enemies. Others want it as a means of improving civilian living standards. Still others regard growth as a way of assuring employment of a growing labor force. Transcending and including all of these, perhaps, is the idea that economic growth is needed to express the vitality of our economic and political way of life.

As economic abundance in the United expands and is more widely shared, agreement on appropriate economic goals becomes more urgent. These goals can never be blueprinted exactly—as has been brought out so clearly in the hearings before this Committee. They are not solely materialistic and they are not all subject to expression in statistical terms. They include, for example, the improved quality of our educational system and of our health services—not just additional schoolrooms or hospital beds. Despite difficulties in measuring true growth precisely with the tools now at hand, we have made some progress and now know much more about the nature of growth than was known some years ago.

Early in its existence, the Board recognized that measurement of physical output was essential for proper formulation of monetary policy, and undertook a special responsibility for the statistical measurement of industrial output and its change and growth. This, it is true, is only part of our Nation's total output of goods and services, which is measured by gross national product. However, in an advanced economy, in which industrial activity is a dynamic central element, growth in the physical volume of industrial output merits special study in its own right because of its central role as a force shaping total growth.

When I appeared before this Committee last summer, I noted some preliminary findings of the recent revision of the Board's index of industrial production, principally the greater industrial growth shown by the newly revised index. Since then, the final results of the new index have been published, thus supplementing the tools for analyzing past and future changes in the industrial sectors of our economy.

Industrial production is the output of real goods produced by our factories, mines, and electric and gas utilities. Our revised index shows that, since 1947, industrial output has grown 4.1 percent per year, as compared with 1.7 percent for population. This is a growth in real industrial output per capita of over 2 percent per year. In other words, we are producing 31 percent more

industrial product for each man, woman, and child in America than we were at the beginning of the period. Output per industrial worker has increased even more rapidly—at the rate of 3.7 percent per annum over the same period.

The revised index of industrial production also introduces a new grouping of total output. Output measures for finished goods have been grouped into the broad market categories for consumer goods and equipment, and the measures for output of materials have also been grouped together. Briefly, this new grouping suggests that over postwar years, civilian production, and particularly the production of consumer goods, has expanded almost without any evident slackening in pace at an annual rate of 3.7 percent. Moreover, the cyclical interruptions in the output of civilian goods, especially consumer goods, have been relatively small. It is mainly in the production of equipment, including defense goods, that output has shown greater fluctuation about its expanding trend.

CONDITIONS REQUIRED FOR CONTINUED GROWTH

While industrial growth, as measured by the production index, reflects physical volume of output, many measures of growth are expressed in terms of current dollars. We must constantly guard against mistaking increases in dollar magnitudes for real economic growth. It is sometimes suggested, when the rate of expansion slows down because the economy is operating close to capacity, that a more rapid expansion of bank credit and money would stimulate greater aggregate output. In fact, such an attempt would only lead to a bidding up of costs and prices as various sectors compete for limited resources. It is true that this would increase temporarily the gross national product measured in current dollars, but it would not involve any real growth. Quite aside from its other evils, inflation brings about misapplications of resources that actually reduce the true value of current production. There must be sustained confidence in a stable dollar for such adverse developments to be avoided.

Sound growth depends on a number of factors besides confidence in a stable dollar. In my own view, the following are the chief supplementary factors:

1. Balanced and sustained demands for labor and for the products of business;
2. Improvement in technology and skills;
3. Adequate capital formation based on voluntary savings;
4. Greater mobility of resources; and
5. Sufficient flexibility of individual prices.

Although there have been three postwar recessions, demands for labor and for the products of business have been reasonably well sustained over this period. During each of these recessions, stability of consumption helped to stimulate early revival. This stability in final demand encouraged entrepreneurs to maintain capital expenditures at surprisingly high levels even during temporary recessions. Such expenditures fluctuated moderately considering their long history of instability.

How much further the process of economic stabilization can be carried remains an uncertain issue. All men of good sense want to see our economic resources used fully and all men of good will want to have employment opportunities available for those willing and able to work. Satisfactory economic growth and reasonable price stability are not only compatible goals, in my view, but they are necessarily interdependent. At the same time we all recognize that some fluctuations in prices and employment are probably unavoidable and that, in the present state of the economic arts, it is hard to see how complete stability could be achieved without stifling some developments in our economy potentially favorable to growth.

Advancing technology and improvement of skills depend on educational processes and the general cultural environment. Our national pride has been pricked by discovery that other nations have beaten us in some aspects of technological development. This evidence is found not only in military hardware but also in the mounting competitiveness of the rest of the world. Products from abroad are increasingly penetrating our markets. This challenge, however, may well provide the stimulus for new achievements on our part.

If we are to maintain our competitive position in the world, we must also make regular additions to our productive capital and to our efficiency. Adequate capital formation depends both on the drive of business to make the capital investment and the availability of adequate funds from voluntary saving.

Mobility of resources must receive continuous attention. Near the top of successive postwar peaks in activity, unemployment has tended to be somewhat higher. In part, this may be due to structural imbalances growing out of the problem of transferring the labor force from industries made obsolete by growth to areas of higher labor demand. Such imbalance may also stem from the problems of adapting workers to the technological and sociological demands of the service industries, which are the more rapidly growing sources of urban employment.

Flexibility in the shifting of resources, of great importance for maximum growth, is extraordinarily difficult to achieve. One of the effects of growing productivity is to reduce the amount of resources required in particular industries, especially those in which end-product consumption, such as consumption of food, grows at a slow, steady rate. The process of moving resources aggravates our cyclical difficulties and creates a problem of structural unemployment. Steps to lessen the economic loss to the Nation and the hardships for individuals resulting from shifts in the pattern of production are an important public responsibility.

If we are to be able to continue to rely on the price mechanism to effect the necessary adjustments in a growing economy, prices of both end products and the factors of production must move freely in response to shifting demand and supply conditions. Imperfections in the price mechanism must be rooted out wherever they may exist, if our free enterprise economy is to realize its full potential.

PROJECTS FOR 1960

In early 1960 the economy continues to show a sharp pickup from the period of hesitation caused by the steel strike. Economic activity is vigorous and prices are reasonably stable. Nevertheless, it is possible we may encounter a renewed spiral in the upward movement of prices, or, perhaps, find that the underlying strength in the situation is not so great as most observers now feel. In these circumstances, all of us are faced with a particularly sensitive problem of maintaining prosperity by endeavoring to prevent either a renewal of inflationary pressures or development of deflationary tendencies.

I sincerely hope that our part in this task as monetary authorities can be aided by a healthy budget surplus of an amount at least as large as the one outlined in the President's budget message. Experience since 1957 suggests that a surplus of this size is a minimum condition of reasonable fiscal health. The relatively brief decline in economic activity that occurred in 1957–58 resulted in a deficit of over $12 billion in fiscal 1959. If a level of economic activity as high as marked 1959, and which is projected in the budget estimate for 1960, results in a barely balanced budget in 1960 and a budget surplus of no more than $4.2 billion in fiscal 1961, the average result of the full period is a net deficit.

Such an outcome would hardly represent symmetrical economic policy. It would therefore appear that larger budget surpluses are needed in times of prosperity if we are to avoid having to make regular and persistent increases in the public debt. The relatively favorable outlook for balance between saving and investment in the period ahead, with the accompanying prospect of less pressure on the rate of interest, depends in large part on the improved fiscal position of the Federal Government.

I doubt that anyone could be more aware of the real limitations of monetary policy than are the members of the Federal Reserve Board. It is, however, the area of responsibility which has been given to us and in the discharge of that responsibility it has seemed to us that the most constructive contribution monetary policy can make to the vigorous, healthy growth of the economy in the present circumstances is to maintain confidence in the value of money, and thus encourage people to save and invest in the basic capital improvements that add to our Nation's productive strength.

It is relevant to here refer to some statements that I made in the closing portion of a letter to Chairman DOUGLAS on December 9:

"My interest in a monetary policy directed toward a dollar of stable value is not based on the feeling that price stability is a more important national objective than either maximum sustainable growth or a high level of employment, but rather on the reasoned conclusion that the objective of price stability is an essential prerequisite to their achievement.

"I want to emphasize that I am most concerned with the preservation of freely competitive markets and the correction of any institutional imperfections which exist in the working of the price mechanism. While such imperfections cannot be corrected simply by a sound monetary and fiscal policy, they surely cannot be corrected by an unsound financial policy.

"Nor does a sound general monetary policy necessarily, in itself, accomplish the optimum distribution of loanable funds among various sectors of the economy. It is not only the right but the duty of Government to assure that socially necessary programs are adequately financed. But, again, this objective can never be well served by unsound general monetary or fiscal policies. If, as a matter of public policy, the financing of school construction, for example, should have an overriding priority in the allocation of resources, this can be accomplished in a number of ways, but we can be sure that it would not be accomplished by the general expansion of bank credit and money."

In conclusion, I should like to add a word about what monetary policy can and cannot do. It cannot effectively peg interest rates. It cannot prevent monopoly. It cannot assure that the financial needs of all socially desirable activities are met without intervention by Government. It cannot be relied upon to cover Federal deficits. Alone, it certainly cannot assure either stability or growth.

What a correct monetary policy can do is to foster confidence in the dollar, so that our people can and will save and invest in the future with reasonable assurance that their plans will not be frustrated by irresponsible changes in the value of money.

The Civil Rights Conference at the Notre Dame Law School, February 14, 1960

EXTENSION OF REMARKS
OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. BRADEMAS. Mr. Speaker, the University of Notre Dame Law School was sponsor on February 14, 1960, of a conference on civil rights. Members of Congress, officials of the Department of Justice, State and local government officials, professors of law and representatives of voluntary associations gathered on the campus of the University of Notre Dame to discuss legislative proposals now before Congress in the field of civil rights.

The discussions by these distinguished citizens were so valuable that I am pleased to be able to call them to the attention of Members of Congress by joining with several of my colleagues to include the proceedings of the conference in the CONGRESSIONAL RECORD.

PARTICIPANTS IN CIVIL RIGHTS CONFERENCE, FEBRUARY 14, 1960

Mr. Douglas Anderson, assistant to Senator PAUL H. DOUGLAS.

Mr. Berl Bernhard, Deputy Director Commission on Civil Rights.

Representative JOHN BRADEMAS, of Indiana.

Representative WILLIAM G. BRAY, of Indiana.

Prof. Thomas Broden, Jr., Notre Dame Law School.

Mr. John D. Calhoun, Assistant Deputy Attorney General.

Prof. Roger Cramton, the University of Chicago Law School.

Prof. Wylie H. Davis, University of Illinois College of Law.

Mr. Russell De Bow, assistant to Representative BARRATT O'HARA of Illinois.

Senator JESSE L. DICKINSON, Indiana State Senate, executive director, South Bend Housing Authority.

Representative JOHN D. DINGELL, of Michigan.

Senator PAUL H. DOUGLAS, of Illinois.

Prof. Jesse J. Dukeminier, Jr., University of Kentucky College of Law.

Mr. Vernon Eagle, executive director, the New World Foundation.

Prof. Samuel D. Estep, University of Michigan Law School.

Mr. Herman Edelsberg, chairman, National Civil Liberties Clearing House.

Mr. John Feild, legislative assistant to Senator PHILIP A. HART, of Michigan.

Mr. Robert J. Fink, administrative assistant to Governor Harold Handley of Indiana.

Mr. Harold C. Fleming, executive director, Southern Regional Council.

Mr. William R. Foley, General Counsel, Committee on the Judiciary, House of Representatives.

Prof. George W. Foster, Jr., University of Wisconsin Law School.

Prof. Robert J. Harris, University of Michigan Law School.

Mr. James Harrison, administrative assistant to Congresswoman EDITH GREEN of Oregon.

Rev. Theodore M. Hesburgh, C.S.C., president, University of Notre Dame; member, Commission on Civil Rights.

Representative Jeanne Hurley, Illinois General Assembly.

Commissioner George M. Johnson, member, Commission on Civil Rights; professor, Howard University Law School.

Senator Marshall F. Kizer, Indiana State Senate.

Prof. Conrad Kellenberg, Notre Dame Law School.

Rev. William J. Kenealy, S.J., professor, Loyola University School of Law.

Representative THADDEUS MACHROWICZ, of Michigan.

Mr. Clifford E. Minton, executive director, Urban League of Gary, Ind., representing the National Urban League.

Representative WALTER H. MOELLER, of Ohio.

Dr. John A. Morsell, assistant to the executive secretary, National Association for the Advancement of Colored People.

Mrs. Nancy Murry, executive secretary to Senator WILLIAM PROXMIRE, of Wisconsin.

Prof. Nathaniel L. Nathanson, Northwestern University Law School.

Mr. Robert Nelson, legislative assistant, Commission on Civil Rights.

Dean Joseph O'Meara, Notre Dame Law School.

Prof. Roger Peters, Notre Dame Law School.

Prof. Robert Rodes, Jr., Notre Dame Law School.

Mr. Fred Routh, president, National Association of Intergroup Relations Officials; executive secretary, Michigan Fair Employment Practices Commission.

Mr. Joseph Russo, legislative assistant to Senator VANCE HARTKE, of Indiana.

Prof. Ivan C. Rutledge, Indiana University School of Law.

Mr. John A. Scott, chairman, Indiana Advisory Committee, Commission on Civil Rights.

Mr. John Silard, Washington attorney.

Representative Paul Simon, Illinois General Assembly.

Prof. Theodore Smedley, director, Race Relations Law Reporter, Vanderbilt University School of Law.

Mr. Hal Thurmond, chairman, Kentucky State Advisory Committee, Commission on Civil Rights.

Prof. William W. Van Alstyne, assistant dean, Ohio State University College of Law.

Mayor Edward F. Voorde, South Bend, Ind.

Prof. Bernard J. Ward, Notre Dame Law School.

Gov. G. Mennen Williams, Michigan.

Prof. Harris Wofford, Jr., Notre Dame Law School; legal adviser to Commissioner Hesburgh, Commission on Civil Rights.

Mr. Adam Yarmolinsky, Washington attorney.

CIVIL RIGHTS CONFERENCE, FEBRUARY 14, 1960, NOTRE DAME LAW SCHOOL, NOTRE DAME, IND.

Dean O'MEARA. The Civil Rights Conference will come to order. We want this to be informal, so I'm going to sit down for the few remarks I have to make to begin with.

America is equal opportunity or it is nothing: not equal opportunity as regards this or that, but equal opportunity in every area of American life. In all frankness, I do not see how an American could seriously challenge this proposition. We have our differences as to method and timing, but the central idea, the affirmation of equal opportunity for all, is not only part of the American dream but a built-in and essential feature of the fundamental law of the land. That is a postulate of this conference. We are met to consider how best to bring the promise of the Constitution to fulfillment.

On this day, Sunday, a day on which many of us are expected to concern ourselves in a special way with spiritual values, and in these academic surroundings I hope we will be able to lay aside prejudices and partisan considerations and approach this important subject with as much objectivity as humans are capable of.

As you know, each of the three areas of discussion is to be introduced by a short statement by a member of the Notre Dame law faculty. Then will come the discussion, in which I hope everyone will feel free to participate, both by question and by comment. This is the heart of the conference, and it will be fruitful in proportion as the discussion is frank and perceptive and stimulating.

Before we get to that, however, I have the very real privilege of presenting to you to say a word of welcome the president of the University of Notre Dame, Father Theodore M. Hesburgh.

Father HESBURGH. Thank you, Dean O'Meara. Governor Williams, Senator DOUGLAS, distinguished guests, dear friends.

I trust that the brevity of my remarks this morning will not detract from the very real fact that we are simply delighted to have all of you with us for this most important occasion. I think it just another experiment that has been inaugurated by our Dean O'Meara in seeing how somehow the mechanism might be arrived at to bring together those who have the deep responsibility of formulating the laws of this land and those whose lives are somewhat surrounded in the academic halls where they try to prepare young men for the great responsibilities of public life and of service to justice under the law.

I think it a wonderful thing that legislators and those who concern themselves with the common good of this country can foregather in a university environment so that hopefully by mingling for a day with the professors of the law and the students of justice and charity in our land somehow we might bring to bear the greatest measure of wisdom in this area that is so troublesome in our day. Certainly in every area of our national life today there is need for greater and greater wisdom: in our programs of science and technology, in our discussions of foreign policy, and most particularly for our meeting here this morning in the area of civil rights.

We are delighted, as I said, to have you with us, and we are glad to have the opportunity to make this small contribution to the great debate which will begin in the Halls of Congress tomorrow morning. I trust that our discussions here, as the Dean has said, may be substantial and substantive, that we may be all of us trying to see what we can do in the way of means while we stand undivided in the matter of ends. Because as the Civil Rights Commission has said so often through its individual members and in its report, our great concern is for the human dignity and the equal opportunity and the real constitutional rights of every American citizen.

We made certain suggestions to the end that these rights might be maintained and preserved. We feel no compulsion to say that our suggestions are the only ones that would actually effect this end. We are interested in the achievement of civil rights throughout the length and breadth of the United States, and I think we would all of us agree that meetings like this morning where responsible citizens, legislators, students of the law, professors of the law, look to this end with a view to the best means of achieving it—this is indeed our main concern and I trust yours also.

So let me just say we're delighted to have you. We know this is going to be a busy day, and as the dean said, the discussion is the substance of this day, so I shall sit down and let us move on toward the presentations and the discussions for which you have come.

Dean O'MEARA. Ladies and gentlemen, we're to have a double welcome. You've been welcomed on behalf of the university, but the university provides only one segment of this discussion. It seems fitting that you should be welcomed by someone representing the public-official segment of the conference. We asked Congressman

BRADEMAS to do this. It's my pleasure to present him at this time.

Congressman BRADEMAS. Father Hesburgh, Dean O'Meara, Dean Johnson, Senator Douglas, Governor Williams, my distinguished colleagues in the Congress, ladies and gentlemen.

I count it a high privilege to be able to welcome so distinguished a group of Americans to the district I have the honor to represent in Congress. More especially do I feel privileged to welcome you to the campus of this great university for the purpose of discussing, on the eve of its consideration by Congress, an issue of profound importance to the people of the United States.

They are bold words, indeed, with which the Declaration of Independence sets forth the beliefs on which our country was founded, beliefs that we have not yet completely translated into reality.

"We hold these truths to be self evident," says the Declaration, "that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men * * *."

It is to consider the ways in which the Federal Government can help secure to millions of American citizens now denied certain of these unalienable rights that we are meeting today.

Permit me, Father Hesburgh and Dean O'Meara, to express to you and the University of Notre Dame the genuine appreciation of my colleagues in Congress and of the other distinguished persons, officials of government, teachers of law and representatives of voluntary associations, for the hospitality you are extending to us today.

To his many other accomplishments in the service of our country, Father Hesburgh must now add his contributions as a member of the Commission on Civil Rights. I believe most of you would agree that the Commission's report represents an extraordinary landmark in the development of equality of opportunity in this country, and one of the reasons for the high quality of the report is Father Hesburgh.

This Conference on Civil Rights at Notre Dame is one in a line of achievements of the dean of the law school, Joseph O'Meara. Dean O'Meara's vigorous and dedicated intelligence has been chiefly responsible for a series of symposia at Notre Dame, each of which has resulted in a special issue of the Notre Dame Lawyer which has been widely distributed and read.

In December 1953, the law school held a symposium on "Legislative Investigations," concentrating on safeguards for witnesses; in April 1958, a conference on "The Role of the Supreme Court in the American Constitutional System," at which time the Court was under heavy attack and constructive thinking was much needed; and in May 1959, on "The Problems and Responsibilities of Desegregation". In April of this year I understand there is to be another symposium, on "Labor Union Power and the Public Interest."

Our discussions at Notre Dame today on the issue of civil rights represent a pioneering effort in the method of developing public law, a method whereby national legislators, law school teachers, and key legislative draftsmen from both Congress and the executive can collaborate effectively.

Let us hope that this cooperative experiment proves so fruitful that it can be usefully extended to other legislative issues. It is, of course, to be understood that the law school is not concerned to press any particular viewpoint but rather to offer a means for bringing together informed, intelligent views.

You may be interested to know that it is the intention of several Members of Congress to include the transcript of this conference on civil rights in the CONGRESSIONAL RECORD in order to bring the work of the conferees to the attention of a wider audience.

Abraham Lincoln said, "If we could first know where we are and whither we are tending, we could better judge what to do and how to do it."

By its monumental work, the Civil Rights Commission has shown us where we are in the field of civil rights. Our task today is to discuss what to do and how to do it.

In our brief time, we can perhaps seek to answer two questions.

First, what new action in the field of civil rights is within the constitutional power of Congress?

Second, what is the most appropriate way for Congress to exercise its constitutional power?

Notre Dame Civil Rights Conference—Part 2

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. BRAY. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil-rights conference at the University of Notre Dame on February 14, 1960:

PART 1—THE RIGHT TO VOTE

Dean O'MEARA. Thank you, Congressman. Now, ladies and gentlemen, there have been some important developments which, so far as I know, have not yet been reported in the press. It is our great good fortune to have with us two gentlemen who have had a great deal to do with them and who are apprised of what's been going on and who can give us these late developments. It will assist us in our discussion, I think, if before the discussion proper gets underway we have a brief, factual statement by them of what has recently, very recently, taken place. Professor Wofford suggests that perhaps this should be put off until after his opening remarks and, as a matter of fact, that's what I agreed to do last night. And perhaps I'd better abide by that undertaking and call on Mr. Calhoun and Mr. Silard to fill you in on these recent factual developments after Professor Wofford has given you the benefit of a background summary which he has prepared.

If anyone is entitled to the credit for this conference, it's Harris Wofford. I freely acknowledge that and express my indebtedness to him, and ask him now to get the conference proper underway by means of this background statement that he has ready. Professor Wofford.

Professor WOFFORD. Thank you, Dean. I think Mr. Calhoun and Mr. Silard would have been surprised, too, because I was supposed to be their build-up, and I'm afraid if turned around the other way I would have been their roadblock, because I think the developments they have to report start off the discussion at a fast and important pace, and at that point I think what I have to say might slow it down.

In the middle of the Civil War Lincoln wrote, "I have been controlled by events." We can say now that events are in control of the civil rights bill which will emerge from this session of Congress.

The Commission on Civil Rights has had its say and the Attorney General has had his. The Senate Rules Committee, LYNDON JOHNSON, and the leadership of the House are yet to be heard. And behind all these present and counted factors are the brooding omnipresences—millions of American Negroes who have been denied the right to vote or who have not dared to try to exercise that right or, even worse, who do not know or care about that right; millions of white southern Americans who still do not accept the command of the 14th and 15th amendments; the whole American body politic with its troubled conscience and yet its relative complacency about this failure to make good the guarantees of the Constitution; and beyond our borders the colored majority of the human race waiting to see what we do; and also that distant shadow or illumination: the law of nature and of nature's God which led a great southerner once to declare that all men are created equal.

Idea and fate are either going to meet in a creative hour for civil rights in this session of Congress or there will be a great fiasco—perhaps a great enough one to insure a later creative hour. The heat already being generated over the central matter of legislation to establish some kind of Federal registration machinery is a good sign. All we can do here is to try to turn some of that heat into light.

SIGNIFICANCE OF ATTORNEY GENERAL'S PLAN

Since there have been a few sparks flying between the Attorney General and the Civil Rights Commission, let me first try to practice what I am preaching. In the background memorandum you have before you I have rolled my thoughts on the relative merits of the Attorney General's referee plan and the Commission's registrar plan into one ball. Some of my criticism of the court-referee plan is stated sharply. I hope that this will all be read as my way of raising some of the important questions.

Let me say clearly that despite the drawbacks I see in the Attorney General's plan, despite my preference for an administrative rather than a judicial approach, I believe it would be a significant step forward for Congress to enact this plan—even if none of the strengthening amendments to the plan that seem to me so vital are adopted. I say this in large part out of faith in the symbolic role of law as educator.

The United States Government is propelled by three great engines but so far in civil rights it has been flying on only one engine—the Federal judiciary. The Civil Rights Act of 1957, the first real exercise of congressional responsibility in this area in 82 years, saw the legislative branch begin to apply its power. A Civil Rights Act of 1960, establishing further machinery to protect the right to vote, will demonstrate that the full power of the Federal Government is coming into this picture—unless States rights are everywhere transformed into State responsibility. I am sure that the adoption of the Attorney General's plan would lead to many more voting rights suits. Such suits and the existence of voting referees would be powerful new signs both to Negroes and to southern whites that the Government at last means to make good the guarantee of the 15th amendment. The result, I think, would be greater Negro effort to register and vote and, on balance, less white resistance.

STATE ELECTIONS SHOULD BE COVERED

Moreover, let me emphasize the contributions the Attorney General has in my opinion made to the debate. His insistence that any registration plan include both State and Federal elections is one of these. As Commissioner Johnson told the rules committee, the Commission did not doubt the constitutionality of extending its registrar

plan to all elections, but limited it to Federal elections as a matter of prudence. Either the Attorney General's plan or the Commission's plan could be applied to either Federal elections only or to all elections, for the 15th amendment on which both plans are based unquestionably covers all elections on all levels of government.

Another contribution is the method of equitable enforcement spelled out in the Attorney General's bill. A court order directed to local election officials requiring them to honor the Federal registration, permitting prosecution for contempt of court in cases of refusal to honor such registration, and a court-appointed agent to attend at the actual balloting and to report any violations to the court—this seems to me the best way to enforce any Federal registration machinery, whether that machinery is set up through the court, as the Attorney General insists, or administratively in the executive branch as the Commission proposed. Some of the registrar bills provided for equitable enforcement but some of the details of the Attorney General's bill should certainly be incorporated in any Federal registration act.

CRITERION FOR LEGISLATION

We can agree, I hope, and perhaps we should begin by trying to agree on the chief objective of further legislation to protect the right to vote. On pages 7 and 8 of the background memorandum I have adopted the objective stated in Commissioner Johnson's testimony that "the method of registering persons denied their constitutional right to register to vote be no more complicated or cumbersome than the method available to other citizens in the State or district who are registered." Attorney General Rogers and Deputy Attorney General Walsh have expressed their general agreement with this objective.

With this as the criterion, isn't an administrative procedure established in the executive branch the most appropriate way to provide for Federal registration in districts where discriminatory denials of the right to vote are found to exist? Isn't this problem essentially a political problem—one that goes to the very heart of our political process itself—that should so far as possible be solved politically? I call your attention to the memorandum by Paul Freund before you which makes this point strongly. Haven't the Federal courts been already unduly burdened with the problem of school desegregation? Isn't the administrative load that would under the Attorney General's plan be placed on the Federal judiciary an immense and unprecedented one—so immense and unprecedented as to raise most serious questions about the appropriateness of this procedure? I call your attention to the Black-Emerson-Pollak (Yale) memorandum before you which makes this point strongly.

DISADVANTAGES OF JUDICIAL APPROACH

It is of course true that in many cases—perhaps in most cases—there will need to be court enforcement in the end. But the question is whether the court should be in this problem from the beginning or come in at the end, as a last resort. There are certainly advantages in having the court in from the beginning, and perhaps we should simply accept, and not question, De Tocqueville's comment, which I think he meant as a criticism, that in America nearly every political question ultimately takes a judicial form. Perhaps the Federal district judges in the localities involved will command far more respect than the President of the United States and his appointed agent—although I can't ignore the irony in this in view of the white southern complaint about judicial legislation.

But, if the courts are in this process from the beginning, what are the prospects for court findings of the pattern or practice of discrimination proposed by the Attorney General? Is Judge Skelly Wright's recent decision in a case where there was overwhelming evidence of a mass purge of already registered Negroes an exception that proves the rule of reluctance by southern district judges to move in this matter? If the appointment of a voting referee is left to the discretion of the southern district judges, as under the Attorney General's present draft bill, how many such judges will exercise that discretion? And if the procedure before the referee is left to the discretion of the judges, won't some or most of them provide for a kind of adversary proceeding before the referee, a proceeding in which the Negro applicant would be subjected to cross-examination by attorneys for the State officials? And if this happens, how many Negroes will undergo this ordeal by litigation involved in securing their right to vote? How many white citizens would register if it took hours or days or weeks of trial, and possible intimidation while being the center of such a trial?

AMENDMENTS AND ALTERNATIVES

If the Attorney General's plan is to be really effective must it not be amended to make the appointment of referees mandatory under certain conditions and to require the referees to register qualified applicants in a routine, ministerial, ex parte way?

Mr. Calhoun will tell us the details of the new language that Judge Walsh told the House Judiciary Committee the Attorney General would accept as clarifying amendments in this respect. I think that what he will report is a most crucial step forward in this picture.

Then I hope that we will discuss today possible combinations of these two approaches that have some of the benefits of both. Beginning on page 14 of the background memorandum I have outlined some of the alternatives that occur to me.

My own preference would be to see both plans adopted, with the Attorney General's sanctions available in enforcing the rights of persons registered under a presidentially appointed registrar, with this Presidential action perhaps limited to Federal elections, with the Attorney General's court procedure available to attack any continuing discrimination in State elections. This is the kind of dual relief provided in antitrust law with enforcement by both the Federal Trade Commission and suits by the Attorney General.

The next best alternative, it seems to me, would be an administrative agency determination of the existence of the discrimination in a district and then court enforcement through registration by referees. Another combination would be a court finding of a pattern of practice of discrimination and then Presidential appointment of registrars.

You may and I trust you will suggest other and better alternatives. Perhaps we should begin with an appraisal of the two main proposals, the registrar and the referee plans. But most important let us try to discover the essential ingredients of whatever plan is to emerge—the essential ingredients of effective legislation that by whatever name will smell the same—and do the job.

Notre Dame Civil Rights Conference—Part 3

EXTENSION OF REMARKS

OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. ROUSH. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the Civil Rights Conference at the University of Notre Dame on February 14, 1960:

Dean O'MEARA. Thank you, Professor Wofford. I'll ask you, Mr. Calhoun, to make your report at this time, please.

Mr. CALHOUN, Department of Justice. In the first week of February queries of the character just made by Professor Wofford with respect to the Attorney General's bills were made to the Department of Justice. On February 9 the Deputy Attorney General at a hearing before the House Judiciary Committee attempted an answer to those queries. The Deputy Attorney General made clear that the Department did not oppose any effort by the Congress to spell out in such detail as it thought appropriate the procedures that were to be followed for the voting referee or at the district court or at the polling places. The Attorney General's bill had left that elaboration to the Congress to the extent that Congress thought it could accomplish it.

The Deputy Attorney General in his testimony suggested one form of spelling out that might be appropriate. It is the language that he suggested, language that is not before you, that I would like to read now. Referring to the procedures before the voting referee he suggested that the bill should say:

"In a proceeding before such person or persons so appointed the applicant shall be heard ex parte. His statement under oath shall be prima facie evidence as to his age, residence, and his prior efforts to register or otherwise qualify to vote. Where proof of literacy or an understanding of other subjects is required by valid provisions of State law, the answer of the applicant, if written, shall be included in such report to the court; if oral they shall be taken down stenographically and a transcription included in such report to the court.

"Upon receipt of such report, the court shall cause the Attorney General to transmit a copy thereof by mail to each party to such proceeding together with an order to show cause within 10 day why an order of the court should not be entered in accordance with such report. Upon the expiration of such period, such order shall be entered except as to any applicant named in the report as to whom the State registrar or other appropriate party to the proceeding prior to that time files with the court and serves upon the Attorney General and the applicant concerned a statement of exceptions to such report which, if the exceptions relate to matters of fact, is supported by a duly verified copy of a public record or by affidavit of persons having personal knowledge of such fact and, which, if relating to matters of law, is supported by an appropriate memorandum of law."

I think perhaps the most important contribution of the deputy's testimony was not the specifics of this language, but the thought that the Department of Justice is quite anxious to have the Congress spell out in any area that it thinks it necessary procedures that give the full safeguards that are required to assure large registration for qualified Negroes.

Dean O'MEARA. Thank you, Mr. Calhoun. Now Mr. Silard, please.

Mr. SILARD, Washington attorney. I might say that I do not represent any organization here today. I am here in the capacity of one who has been personally involved in various proposals. I would like to report one particular development from the chairman of the Senate Rules Committee which probably has not yet reached the attention of this body. This occurred yesterday afternoon.

But before that I think that I would like to state the four points upon which it seems to me—until the new fifth element was introduced yesterday—the administration and the Civil Rights Commission and most proponents of legislation have reached substan-

tial agreement, not unanimity but substantial agreement.

The first and the most important of course is the one Mr. Calhoun just made reference to, that is the requirement that by one means or another there be appointed an officer, or that there be a system of Federal registration available to persons in the disenfranchised class—a system which is no more onerous than the State registration process. Beginning with what now appears to be a concensus on this aspect, the Federal registration system will be comparable, perhaps almost identical to that provided by the State—say a 5-, 10-, 15-minute operation.

Beginning with a concensus on this, it seems to me that there is broad recognition of two other elements to which the Attorney General has made much reference. The first of these, and what then becomes a second ingredient of a workable bill, I think, is that there be a judicial finding of a pattern or practice of racial disfranchisement, prior to the appointment of any Federal registration official in the locality involved. Certainly this is a proposition that could be debated at length. Other bodies than the courts could make such determinations, but I think there appears to be a jelling on the proposition that the Attorney General has done the right thing in proposing that a judicial finding of a pattern precede any Federal system of enrolling persons for election.

The third element upon which I think there is now a concensus, quite cleanly a concensus I would hope, is that the Federal registration system, whatever it may be, be effective both for Federal and for State elections. I think it is no longer possible to answer the Attorney General's contentions along these lines and to fall back upon a sytem which leaves the state election situation without any new remedies.

The fourth element upon which I am sure everyone is agreed, and one to which the Attorney General again has pointed with considerable stress, is the necessity for the availability of Federal injunctions to assure that those who are registered under a federal registration system will be permitted to vote. I don't see that anyone has ever seriously been able to defend any system which lacks this ultimate Federal sanction at the point where the registration system either will or will not result in somebody's obtaining the right to vote.

With these four elements appearing as the basis of a workable bill, upon which the administration and many other persons could agree, there remained a fifth difficulty. And the fifth difficulty was—is as of today—that at least under the proposal of the Attorney General there would seem to be required for each individual voter who desires to enroll under the Federal mechanism, there seems to be required at some point prior to the election a full judicial hearing, that is to say that the State must have its full day-in-court, however long that day must be, on every one of hundreds of thousands or ten. or whatever the number may be, of persons enrolled in the Federal mechanism. And if the State must be given this board judicial right to its day-in-court prior to the election, many people have questioned whether these people who have ultimately become—who have tried to become enrolled in the Federal structure—will obtain the right to vote before the election is over.

Consider for instance the right of a State to prescribe that registration for elections shall be held in a period of 30 days or 60 days prior to the election, and nothing precludes the States from imposing this requirement generally. Prior to every election everyone who desires therein must register within a 60-day period. Well, now under the Attorney General's proposal, it would seem the Federal enrollee must first go to the State official and be turned down or stand in line long enough to make sure that he's not going to get in. Then he must go to the Federal official and prove his qualifications, and then before he ever obtains a judicial decree entitling him to vote—and remember a 60- or 30-day period is meanwhile running—the State must have its right to come into the Federal court and put him on the witness stand, produce evidence presumably of his disqualifications, perhaps he's living in the wrong county—heaven knows what it might be—and the court must adjudicate this issue and it must do so with respect to every single one of hundreds of thousands of persons.

Now when you consider that under the Attorney General's plan this would have to be done at every election, because the registration period under the Federal scheme is no longer than the registration period under the State scheme, we could easily be confronted with a situation where at every primary and general election we must initiate within a very short time period this entire double administrative and judicial process for each individual person in the class which has been disenfranchised.

To meet this grave problem many persons have suggested that the appropriate moment for the State's challenge of the Federal enrollments which everyone seems to be contemplating here comes not prior to the election, but, as is now the case in the State elections, comes at the moment that the enrollee desire to vote. This, I take it, is the system employed in every State of the Union today. No one affords the opportunity to challenge registrations at the time of registration. The appropriate moment that you challenge eligibility of those who desire to vote is at the moment that they desire to exercise that eligibility. After all, it's even speculative whether any particular person will desire to vote, whether he will be alive or living within the district at the time that the election comes.

So on this fifth most vital difficulty, it seems to me that there has been a great need for the suggestion that it might well be that every constitutional right of the State to challenge the eligibility of persons who are enrolled in a Federal system is met, so long as that State's day-in-court comes at the moment that the voter desires to vote. He can be given his right to vote so that it will be made available for counting later, or it could be counted subject to defeasance, and at that time subject to the ultimate determination of the Federal district court as far as the individual vote is concerned. He has done his job. He has become enrolled quickly. He has voted without difficulty. Then we might well afford any degree of judicial process that is necessary to afford the States their day-in-court upon this voter's eligibility.

In line with this fifth suggestion I'm happy to be able to read two or three sentences from Senator HENNINGS' press release of yesterday afternoon. The Senator said that as chairman of the Committee on Rules and Administration of the Senate he had completed work on the first draft of a bill to protect voting rights and would submit the new measure to the Rules Committee on Wednesday. He then stated: "I believe this new proposal which I call the Federal Enrollment Officer Act of 1960 will substantially advance the opportunity for an effective voting rights bill, to be approved by the Congress this year."

HENNINGS said the text of the proposal would not be available until after the meeting of the Committee on Rules and Administration on Wednesday. "One of the major contributions of the draft bill," he said, "is that it assures that the voters enrolled to vote under its provisions would be guaranteed the right to cast their ballots while reserving the right of the States to contest the validity of the ballots until after the vote had been cast. This provision will minimize the court appeals and delays that could well block what we are trying to accomplish." And then Senator HENNINGS expressed his hope that the Rules Committee in the Senate would be able to provide a workable bill acceptable to the administration and others which could be the basis of a meaningful Senate debate upon a voting bill.

And with this fifth element, if it were to become acceptable to the administration, I think the solution may be close on a workable voting bill. I think this fifth principle could be stated thus: There is necessity for provision for State challenge of Federal registration at a time and in a manner which cannot by delay defeat the right of those enrolled to cast their votes in the election. Thank you.

Dean O'MEARA. Thank you, Mr. Silard. Now two points before I call on Congressman BRADEMAS to open the discussion proper. First, along the side of the table opposite me are members of law faculties. While there are some exceptions to the rule I'm about to give you, those who are sitting with me at this table and some of those at the two ends hold some sort of official position.

Now it is with respect to employees, staff members of various Government units, that I wish to say just a word which is the second point. We understand that anything said, any views expressed, any statement made, is on behalf of the individual and not made in a representative capacity unless it is made clear that what he is saying is said in a representative capacity.

Congressman BRADEMAS will lead the discussion which, as I said before, I think is the heart of this conference, and I'm going to ask him to begin now.

Congressman BRADEMAS. Professor Wofford has made very clear it seems to me that our task here is to try to find out what the basic ingredients of a good voting rights law are to be, and Mr. Silard has suggested that there may already be concensus on what some of the elements of such law may be. I wonder if we would all be in agreement with him that this is the case. For example, here are two or three areas that I would raise questions about.

In the first place, to what extent are we agreed that the job should be done through a judicial approach or through an administrative approach? For example, should we have, as Mr. Silard suggests, a judicial finding, if I understand him correctly, of a pattern of discrimination? Or does this pose so many problems that the job should be done through some administrative approach? Supposing that there is a judicial finding of a pattern of discrimination. How often should such a finding be required?

A second general area that we might talk about is the problem of enforcement. Should this be done through criminal procedures or through some other approach?

Third, perhaps, do we all find ourselves in agreement that both State and Federal elections should be covered by our voting rights law. I notice that in the Yale memorandum that some of you may have read, the suggestion was made that to begin with we should only make the law apply to Federal elections.

These are just some of the questions that occurred to this obviously lay politician as we try to think through this problem. I'm going to ask the senior Member of the Congress, who is with us here today, Senator DOUGLAS, another nonlawyer, if he has any observations to make on these matters, Senator.

Senator DOUGLAS. Mr. Brademas, first let me say that I think it's highly important that we approach this matter with an attempt to obtain as great a degree of unity as possible, and that we regard as secondary

the origin of these proposals or the party sponsorship. Our difficulties are going to be very great and if we split up amongst ourselves as a practical matter it's going to be very difficult to get anything whatsoever done. And as a nonlawyer I suppose all I can do is raise certain doubts that I have and ask the lawyers to answer them.

I have a certain fear of a purely judicial process, because it seems to me that you have a danger of undue delay. I had not realized that in the proposal of the Attorney General that the application of each individual respective voter would become a separate case and that each case could be contested by the State. Now if this is true, this seems to me to give to the State and local authorities who are determined to prevent Negroes from voting the opportunity of tying up the courts and the referee in the original instance.

The second question that I would like to raise is about the process of appeal. Suppose you get a verdict from a referee asking for the court that John Jones should be permitted to register. Then a series of questions come from this. Can the appeal be taken from the referee to the district court which has appointed the referees so that there may be a review of the referee's findings? If so, is the decision of the referee suspended during that time, or is it in operation? Then suppose the district court affirms the decision of its referee and the appeal is taken to the circuit court, what is the status of the finding during that time? Is it suspended or is it in operation? And then if an appeal is taken from the circuit court to the U.S. Supreme Court, is the tentative decision suspended or is it in operation? Now if all these matters are suspended prior to appeal, not only will the first election have passed, but the next election will have passed, and indeed perhaps there may be two or three more elections which will have occurred before the final opinion is handed down. So that this has been in my mind ever since the Attorney General made his proposal, and it's upon this point that I would really like some enlightenment from experts in judicial procedure.

Notre Dame Civil Rights Conference—Part 4

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. O'HARA of Illinois. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the Civil Rights Conference at the University of Notre Dame on February 14, 1960:

Congressman BRADEMAS. Thank you, Senator. Governor Williams has a comment.

Governor WILLIAMS. Thank you very much, Congressman BRADEMAS and Senator DOUGLAS. I'd like first of all to make a few remarks of a general nature that I don't think will hold up the proceedings but will help express, I am sure, the feelings of many of us as to the excellent idea of this conference in the first place.

To Father Hesburgh I certainly want to express my appreciation for the extraordinary work done by this Commission, of which he was an important member. I must confess that I was one of many skeptics who viewed this commission as one having no possibility whatsoever of doing any good, and that it did achieve some success, I think is a minor miracle in and of itself. I think that the pointed questions that they raised are of extreme importance to all of us. And of course some of them we're expressing here today. I think one is the question of executive action. I don't know if that's in order today or not, if it isn't I certainly think that it would be well to have a similar conference on that point.

I'd like to say that it seems to me that the idea of the conference, and I don't know whether this is yours, Father Hesburgh, or whether it's Dean O'Meara's, is something which is of extreme importance. For years now I've been saying that this is just exactly what the President of the United States should have done immediately after the 1954 court decision was made, because if men of good will could gather together in an atmosphere such as this, where the academic ivy could somehow or other restrain the partisan political impulses of the public officials, perhaps some reasonable action could have been taken which would have speeded progress and prevented many of the unfortunate things happening that have happened.

Well coming down to our point in question, it seems to me that we're grappling with an exceedingly elusive problem. I happen to live in a State which has been traditionally Republican for a long time, and for Democrats, and we now happen to be the majority, for the majority to be able to register is still a very difficult thing, because for a person in some communities to find the registrar home is almost impossible. The hours of service are such that people just don't seem to be able to fit it into their working lives. Now the point that I make here is just this: if we add to the normal political difficulties the difficulties which might exist because of racial tensions or any other reason, then I think we've got to be most explicit, and we've got to make this procedure just as simple as possible.

Now, while I am a lawyer, at least I used to be, I think the problem of visualizing exactly how these processes are going to work should not be lost on this body. I may be wholly out of order, but I think even if we had a little pantomime here where the actual process of a minority person coming up to register and what happened under the two proposals was acted out it would help us visualize just what we're up against. Because we're not talking legal theory here. This isn't a question of what the Supreme Court's going to do in the final analysis. This is a question of what frail men are going to do when they're going to follow their own inclinations rather than the dictates of the law because they think they're far enough away from judicial process and from the force of public opinion so that they can let things slide.

Well, I think I've commented enough, but I just think that our problem here is not so much a legal problem as a problem of setting up a course of conduct which will be almost self-executing, because without that it's going to be almost impossible for people to achieve the rights that should justly be theirs.

Congressman BRADEMAS. Thank you very much, Governor.

Dean O'MEARA. We are now ready for participation by the members of the panel, and I hope the participation will be a full participation. Who has some question to ask or some comment to make? Mr. Foley.

Mr. FOLEY (Committee on the Judiciary, the House of Representatives). I think at the very outset of this discussion there is a very important point which must be touched on. It is primarily concerned with the Attorney General's proposal, but in the light of what Mr. Sillard has suggested it may well be that it will become involved in an administrative finding. And it's simply this: Judge Walsh testified before the Judiciary Committee that the key to this entire proposal is the conclusive presumption flowing from the finding in your original lawsuit of the pattern or practice of discrimination. Conclusive presumption is the most important phrase. That means, then, that when the applicant goes before the voting registrar there is no issue of discrimination of denial of the right to vote because of color. It is conclusively presumed. Upon review by the court under the Attorney General's proposal the court shall accept the findings unless clearly erroneous. When you take those two factors—the conclusive presumption and your clearly erroneous rule—you have foreclosed any question of the issue of denial of the right to vote because of color.

Query: Assume this hypothetical case. The registrar A was found by the court in the original lawsuit to have by illegal actions discriminated—actions that violated the State statute. Two weeks later, after the court's order has been issued as to him, he dies and Mr. B becomes the new registrar. Then along comes a new applicant who had never applied before, wasn't involved in the original proceedings, and goes before the registrar, and is denied the right to vote. He then comes to your voting referee and asks for the supplemental decree. That is granted, based as I said on the conclusive presumption of the original action that there was discrimination. Comes the day of voting and registrar B says, "No, we will not accept you as a qualified registered voter." Then and there he faces the possibility of criminal contempt, possible criminal prosecution. My question is, gentlemen, is there an issue of due process of law involved as a result of this presumption? I'd like somebody's views on it. It's a very important question, I can say, that has been touched upon already by the Judiciary Committee. Thank you.

Dean O'MEARA. Mr. Calhoun, would you like to say something about that?

Mr. CALHOUN. The requirement in the Attorney General's bill that the court appoint a referee if the court should find that there has been systematic denial of the right to vote under color of law by reason of race or color—this finding is necessary, we think, in order to justify the broad character of the relief which we would then call for. The fact that the registrar against whom the 1971 finding of systematic discrimination runs has died would not in my mind vitiate the conclusion that the type of relief that we call for is necessary, any more than in an antitrust proceeding where a corporation and its officers have been found guilty of antitrust violations, the death of one of the individual defendants would relieve the corporation or other individual defendants of an obligation to follow the decree. If the new referee could come into court and demonstrate to the satisfaction of the court that the character of systematic discrimination found against his predecessor was in fact removed, I suppose the decree could be lifted.

Senator DOUGLAS. May I ask Mr. Calhoun what would happen if the device was used which was employed in Tuskegee; namely, the resignation of the registrars so that a complete vacuum is created and there is no local registrar against whom action may be taken? What is the situation there?

Mr. CALHOUN. The final paragraph of the Attorney General's proposal contains language intended to meet that problem. It reads: "When any official of a State or subdivision thereof has resigned or has been relieved of his office and no successor has assumed such office, any act or practice of such official constituting a deprivation of any right or privilege secured by subsection (a) or (b) hereof shall be deemed that of the State and the proceeding may be instituted or continued against the State as party defendant."

Dean O'MEARA. Professor Foster, I think you had your hand up a moment ago.

Professor FOSTER (University of Wisconsin Law School). I'd like to speak to the two

points that Senator Douglas raised in his remarks. He raised first the question of whether, in a judicial proceeding of the type visualized by the Attorney General's proposal, there would be such individual attention to each person registered before it was finally determined that he had the right to vote, that in fact the right would be totally lost. I would think that whether we had Federal registrars working through an executive agency or whether we had court-appointed referees, that in either of those cases the State would have a day-in-court on the individual registrants. In other words, once you have the finding of the practice of exclusion it would certainly, I take it, be incumbent upon each individual at least to demonstrate that he belonged within the included class—the discriminated against class. To this end, then, if we provide for a State day-in-court, such an individualized attack it seems to me is going to be possible under either type proceeding.

Now on the second question: the effects of an appeal. I would think it consistent with the proposal which the Attorney General has made that in the event that the State chose to appeal from the supplemental decree which certified that an individual is entitled to vote, in the event that decree were to be appealed right on the heels of an election itself, there would be ample power in the court simply in order to protect its own decree to permit the individual to go ahead and cast his vote—to have his vote kept to be counted later.

Now the necessary impact of this is, of course, that you will delay the final determination of the election. But this, it seems to me, is essentially a sound tactic. For if you permit the casting of that ballot, and have it overhang the outcome of the election, you have now for the first time the white resistant South on the side of trying to get this election over with, and with less encouragement to delay in every conceivable way.

In other words, I would think that under the Attorney General's proposal there could be this ex parte proceeding of the sort that Mr. Calhoun has discussed, with the recommendation by the referee that the individual be entitled to participate in the election process. The court at this point moves to enter a supplemental decree. The local-registration officials now move to block it, the court then declaring the right of that person to go ahead and have his vote cast and held by a court officer. Now all of the forces are not against the Negro. There are other forces that are on the side of expediting this appeal.

This, it seems to me, is a device which equally could apply to the matter of registration by a Federal election registrar as well. But in either case, the person should be permitted to vote subject to having his vote ultimately counted in the election after the State had its day in court.

I would guess that the scope of individual review will not be greatly different whether this is done by a judicially appointed officer or whether the registration is done on certification of the Federal executive official. The only proposal I've seen which does not seem to visualize that is the so-called Black-Emerson-Pollak proposal out of Yale, and there they have, it seems to me, set up so different a standard by which the certification to vote shall be made that it perhaps is not politically acceptable at all.

But if you are going to adopt essentially State law as the measure of the person's right to participate, I think the State is going to have its day in court as to each individual intended to vote, and the thing really to be done in your legislation is to make sure that the person's vote gets cast at the appropriate time, and then let what necessary appellate machinery operate thereafter before you finally terminate the election itself.

Dean O'MEARA. Professor Nathanson.

Professor NATHANSON (Northwestern University). I want to make a comment which is really a question, to see if I can advance my own thinking about this. In connection with both Senator DOUGLAS' question with respect to the extent of the day in court and the point that Mr. Silard raised—or the question that he raised—are we all agreed that this should extend to both Federal and State elections?

I've been wondering whether there isn't a problem of choice here as regards the extent to which, by extending the whole scope of this to the State elections, we may then be required to give more of a day in court to the State, to be more careful and to be more involved in litigation. I would think that if it were purely Federal elections then the choice is largely with the Federal Government as to how complete it wants to make the day in court—that the State's interests are really in this case subordinate to the extent that the statute makes it subordinate. The primary parties are the Federal Government and the individual voter. Now I don't know where that leads me. But the thought occurred to me whether this kind of choice is involved and whether we have to weigh the extent to which we want the completer scope or the more summary method of proceeding.

Mr. SILARD. All of the proposals made last year—the Hart bill and the registrar proposals in various forms—were limited to Federal elections, but it seems to me a shame now that the administration has suggested taking a further step to cure the State problem as well—to fall back to the Federal solution of this only, merely because of the State's day-in-court problem. Were there not a solution to this State's day-in-court problem I think the falling back might be dictated. But it does seem to me that the solution that Mr. Foster has just addressed himself to, that the State's day in court be 1 day after the voting—after the election—solves as a practical matter most of the problems which we have been bothered with. And I might say that coming the day after the election when the interest in who actually voted is much minimized unless the outcome of the election is at stake, coming at that point, I certainly, for one, would make that day in court as broad and as long as the State would have it, giving it every conceivable defense, State and Federal, on the issue of the eligibility of the particular individuals involved.

And on this score of delaying the day in court until after the election, I think we should recall that there's some very important judicial history, parallel history which is on our side here. Rule 65 of the Federal Rules of Civil Procedure distinguishes between preliminary injunctions and restraining orders. A restraining order is issued ex parte and without a hearing—and may be so issued under circumstances where delay will defeat rights. A preliminary injunction, on the other hand, is entered only after a hearing.

Now that important distinction, it seems to me, has considerable validity here. In matters of elections delay may certainly, finally, and irrevocably defeat rights, and therefore Congress could appropriately say, as in the case of a restraining order, "We are not going to deny the defendant his day in court ultimately, but for the moment, in order to hold the status quo"—and the status quo at the moment I would take to be the status quo of an enrollment, which ought to be honored—"to hold this status quo so that the court will not lose its power to afford a remedy, we authorize the court to enter an order without a hearing, or on the most minimal kind of a hearing only. However, there comes a later point, at which point we may or may not make this order final, prior to which we afford defendant every possible recognized judicial defense." And I do suggest that the distinction in rule 65 has precise applicability. Though the period may be longer than 10 days, the philosophy it seems to me is quite pertinent and could well be followed by Congress in this respect.

Dean O'MEARA. Mr. Silard has said that the State ought to have all defenses, both State and Federal. I wonder whether someone would like to ask him what he had in mind when he talked about State defenses.

Mr. SILARD. I take it the question has been asked, Dean. I think State defenses include matters such as: This voter moved from the county or the district after his resignation, or otherwise became ineligible. Every recognized defense which State law now allows would have to be afforded to the State, in addition to a defense or a challenge of the enrollment itself.

Professor RUTLEDGE (Indiana University). I wonder if the discussion that has immediately preceded this hasn't transformed the State's position from being essentially a defendant to one of having a challenge and having the laboring oar after the election, which would resolve the preelection processes into the question of how much you want to require before the shift is made, so that the State then takes the laboring oar if it desires to make a challenge. It seems to me that if we look at this problem in that light we have largely overcome the difficulty of State officers resigning, dying, retiring, or having terms expire, and we have, without any problems involving the 11th amendment, put the State into the litigation as essentially a plaintiff.

Professor ESTEP (University of Michigan Law School). I have two comments, one on this recent suggestion of having the litigation process conducted after the election itself. It seems to me you do one of two things. To make it realistic you either hold up the results of the election until you have gone through the legal process, which seems to me is an undesirable—I won't say unacceptable but a very undesirable—thing if it should last over a period of even months, yet alone years, as is possible. But I find myself somewhat unwilling to accept this possibility. Now, if we say, "Oh, well, it won't make any difference unless it's a very close election, and most of them will not be close and therefore we won't have to hold up the results of the election." I think this probably makes it a moot question and therefore it could not be litigated by the U.S. constitutional courts, at least.

And I must admit that I found myself, as a lawyer, doing something that I think that in a situation like this probably is not very good. I found myself getting all wound up and excited by the kind of suggestions that were being made by the lawyers around the room and those who were raising legal questions including the due process question. I find myself worrying about that and stopping suddenly and realizing that what Senator DOUGLAS and Governor Williams and two or three other people have mentioned is probably something that lawyers tend to forget when they get wound up in the technicalities.

I don't want to suggest that we shouldn't do anything at this time—I think we ought to do whatever we can do to help the situation. I cannot help but think that what we've done is out of fear of the political repercussions, and I don't mean to minimize them. But out of fear of political repercussions we've wound ourselves up in some legal tangles that might not be necessary—certainly as to Federal elections would not be necessary. As to the State ones, I would want to think about this one. This is an off-the-cuff reaction. Maybe as to State elections there are some constitutional problems.

But it seems to me that you would solve at least a lot of the problems, particularly

of the delay and the litigation, if we would simply accept Federal registration—ignoring the constitutional question for the moment—Federal registration for all elections. And this doesn't necessarily mean that we have to do away with State qualifications. I think that if I were doing it I would want to do this probably, other than age and residence. But accepting State qualifications, let us have a Federal procedure to determine—and I mean an administrative procedure—to determine the election rolls, and then have those books turned over by the Federal authorities to the election officials that are actually conducting the election, and let those people simply determine whether the signature is correct and the usual kind of thing we now have. You would avoid all of this business of "Do I have to have a hearing by the State? Does the State have a right to due process?" etc., by simply setting up such a Federal registration.

Now I hate the expense of doing it in many States where it would perhaps not be important, but I think those in the North should not ignore that we do have inequalities in some situations there, too. It would be somewhat less insidious if we did it throughout the country. Now I realize that at first blush this means "Oh, you're taking away a sacred right of the State to determine qualifications for voting." It seems to me that actually there aren't that many differences except on some of these key issues of race. But we might really find it much more acceptable in not too long a run, maybe in a short run, to really have Federal control of all registration.

Now you're going to get into some problems with some of the property qualifications for certain kinds of tax assessments, special assessments, and so on. I grant you there are some details of that kind that are going to be difficult. And when applied to State elections we have the problem of a constitutional question here. I don't know whether you would get around this by a general assumption and finding by Congress that the race relation and equality question so pervades the whole election process that we are at least going to provide for registration at the Federal level and not worry about making a finding that in a certain county or in a certain State we now need to put in the Federal Government. We simply are saying that as a matter of administrative convenience we need to do this. I've said enough and have taken enough time. But it seems to me there is something that needs to be done even beyond what we're suggesting now even though perhaps this session is not the one to do it.

Congressman BRADEMAS. Following what Professor Estep has said, I can't resist saying to him that Senator HUMPHREY and I have both introduced joint resolutions providing that there should be offered to the States a constitutional amendment which was suggested by Commissioners Hesburgh, Hannah, and Johnson, that there shall be no State requirements other than residence or age in all elections, which I think is more or less what you had in mind.

Notre Dame Civil Rights Conference—Part 5

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. DINGELL. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the Civil Rights Conference at the University of Notre Dame on February 14, 1960:

Congressman DINGELL. I've been very interested in the various comments that have been made about the technical problems which arise from both the registrar and the referee systems as proposed and the possibility of marrying them and a number of other things and the exploration of the constitutional problems that arise. I think there's one thing on which we can all agree and that is the Constitution is pretty clear that the Congress has the power, first of all, to enact suitable legislation to secure the right of citizens to vote against action of prejudice by reason of race, which seems to be the principal reason for this conference today.

I think that as a practical matter, as the Governor of Michigan, Governor Williams, mentioned, this thing should be self-executing. The report of the Civil Rights Commission said that as a result of the enactment of the last civil rights statute they could find no individual who had been registered and who had been permitted to vote. This would indicate and I think all of us know that those who prefer to keep citizens from voting on the grounds of race are first of all well organized, with extremely intelligent, thoroughly competent lawyers, devoted to their cause, who will use every means possible to prevent citizens from voting. This means that if we are to go into a legislative and political battle in the Congress in Washton to enact a piece of legislation, we must enact a thoroughly effective piece of legislation which will attack the heart and core of the problem in the most vigorous and direct way.

Now I've made some studies of this, and as a result of this I joined Senator HART of Michigan and Senator MCNAMARA and other sponsors of a proposal to provide for a Federal Elections Commission. I think that this is the constitutional method of handling the problem. I think it evades all of the very brilliant dialectical and legal questions which we have been discussing this morning, and I think it goes squarely to the heart of the matter in arranging that in instances where there is denial of the right to vote because of race, the Congress itself shall have a Commission with sufficient power to go in, to register, and to conduct elections.

Now one member of the Senate recently said that the best thing that could be done to guarantee the right of citizens to vote would be a few salutory prosecutions. As a practical matter, juries being what they are in some areas, it's extremely difficult to prosecute. But, if such a Commission could be established, and if it once acted—just once—I think there's no question but what the whole of the problem of voting would fall and would cease to be a significant problem.

I think that if this were done just in Federal elections alone for the Congress and the Senate great progress would be achieved and the roadway would be clear for significant progress in almost every field of civil rights. I think that there's real reason to think that we could extend this to the presidential elections, and I think that there is a very good constitutional argument which can be made to extending an election commission of this sort to State elections. And I think this is the best, the most vigorous, most direct and the most completely effective manner of handling the problem.

Dean O'MEARA. Do you have a comment, Mr. Bernhard?

Mr. BERNHARD, Commission on Civil Rights. I have some familiarity with the Hart bill. I think one of the problems in it is that first it blankets the whole electoral process, and I think this is unwarranted and very costly. Secondly, as it now constituted it is limited to the election of Congressmen and Senators, and I think this in turn would cut out presidential electors and in my opinion might drive some of the States into further diffusion or divisiveness in separating the State elections from the Federal elections. This is one of the problems that has bothered me about it.

I would like to go back and make one or two comments about some of the other statements that have been made. In a way we've got a little bit off into the legal technicalities. I think the real focus is that there are many people who are denied the right to vote because of race or color and a method has to be set up providing for voting equality, first equality in registration, then equality in the ability to vote and the assurance that the vote when cast will be counted.

Now my question, which I thought of when John Calhoun was speaking, was that in the proposal of the Attorney General which I believe has many merits, I'm concerned even though there has been an amendment to the original proposal providing that the proceeding would be ex parte—that nonetheless it's not really equality of registration. You still have individual's coming in who, as the Commission found, have certain fears of economic reprisal or physical harm. They are going through a process which still is dissimilar to going before an ordinary administrative officer, whether he's State or Federal, who doesn't take testimony under oath, who merely makes his own determination. You go in and walk out before an administrative registrar—if it's done fairly it's a short proposition. I think the court procedure might tend to drive certain individuals away from even attempting that method of registration.

Congressman BRADEMAS raised the question: "Well, if you set it up either judicially or administratively you have the problem of enforcement"—and there have been other comments about criminal enforcement, on which I would like to make an observation. I think when you attempt to resort to criminal enforcement you in turn attempt to say: "Well, we will penalize but we won't assure the right to vote," and I think it is an easy way out. Beyond that there is the problem, as Congressman DINGELL has indicated, of getting the juries to convict, or even a grand jury to indict, and beyond that the criminal sanctions available to the Federal Government are extremely limited. As the lawyers know, 18 U.S.C. 241 and 242 deal with the various rights of the Federal Government to enforce civil rights by criminal sanctions, and these have been so limited that they are basically ineffective at the present time.

Just one other comment and I'll be still. It relates to the question of the so-called findings. All attention has been directed to findings being made by judicial officers or administrative officers. I would just like to raise the question of the possibility that Congress itself, in my opinion, could make a finding, based on the findings of the Commission on Civil Rights and its own investigations, that in both Federal and State elections there is evidence that discrimination has occurred and is continuing to occur and that some new legislation is therefore needed and that this is appropriate legislation under the 15th amendment. Whether this is sufficient to cover the problem that will be raised as to whether this would constitute an adequate finding of pattern or practice I don't know.

As to some of the problems that have been brought up here regarding the appeal situation and the delays which are inherent in it, I don't know, of course, what Senator HENNINGS is proposing to come out with. But if there is some way that the actual appeal can be held off until the so-called certificate holder or enrollee is coming up to vote, I think this would overcome the major problems in the present bills, I mean the registrar proposals and the Attorney General's or the administration's proposal on voting referees.

I have been concerned over the problem of whether this should be a basically judicial precedure. There is a question of the burden of the courts at the present time with the desegregation cases. And once you get the courts into voting registrations, including the administrative supervision itself, I think all the simplicity is gone. Because of these observations I throw out to you—because I don't know the answer—the question: What would be the possibility of Congress itself making the appropriate finding to cover both State and Federal elections.

Dean O'MEARA. Mr. Silard, do you have a comment to make?

Mr. SILARD. I think Mr. Bernhard has raised some points that have to be discussed. I might say that Mr. John Feild from Senator HART'S office, who had so much to do with Senator HART'S bill, is here, and that I think he would probably agree that the bill was drafted not as a vehicle for legislation for this year, but as a vehicle for discussion of a rather broad-range solution to the problem, at least at the Federal level. I think Senator HART in his testimony actually so restricted his suggestion. I think John certainly would be available to comment on that.

But I want to make a rather simple point which maybe no one has yet suggested, which I think is responsive to Senator DOUGLAS' and Governor Williams' concern here. Aren't we really striving toward the kind of Federal enrollment procedure which approximates exactly what the State procedure worked out over a 170 years of practical historical experience has dictated? Aren't we striving toward a procedure which permits those who are qualified to enroll, and insures that those who are enrolled can vote and then brings into play the machinery to contest the result if there is some real basis for challenge? Aren't we really striving for a rather simple operation? Enrollment—and the right of those who are enrolled to vote—and judicial machinery thereafter to untangle the web if something has gone wrong with the rather simple administrative mechanism?

There seems to be one other problem which is injected into this kind of approach and which underlies many of the issues which have been posed, and that is the problem that no one is proposing that this State procedure be taken over wholesale. Rather the propositions all seem to go to the point that it be taken over only where there is a need. So that much of the discussion surrounds the issue of who shall determine where the need exists and how shall it be determined. How shall the device be triggered and for what area shall it be effective? But pending the solution of those problems, isn't there a growing agreement—I seem to sense it—that we want really to duplicate the method that the States have worked out over decades and decades of practical experience with this?

Notre Dame Civil Rights Conference—Part 6

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the Civil Rights Conference at the University of Notre Dame on February 14, 1960:

Mr. MORSELL, NAACP. I, as a nonlawyer, have been I suppose as entranced by these discussions over the last several weeks as I have over any other demonstration of the beauty of good legal minds at work. At the same time, it occurs to me that we tend to get into a channel in which we hope to wind up with perfection, something which by one piece of legislation will solve all of these problems. I think we ought to keep in our minds at all times that nothing that comes out of the Congress is going to do all of that.

Take for example the question of fear of reprisal—getting down to the actual individual case of a Negro citizen who wants to exercise his right to vote. Insofar as any legislation is concerned it seems to me the most we can do is to provide him with an ex parte kind of proceeding, where he does not have to sit up and be questioned by hostile State attorneys. But, so far as fear of reprisal goes, when he walks from his home to any building where these things are going on he has incurred the risk of reprisal and we cannot in anything that we do here remove this danger from him. He has attempted to vote in a place where for a Negro to vote is a dangerous act. And we're not going to solve this problem by any legislation.

I know that it has been suggested that one reason for not having judicial proceedings is that the courts are allegedly so busy with school desegregation suits. Again I wonder if this is actually the case. The actual amount of school litigation now pending, or in my view likely in the immediate future, is not voluminous. And I do not believe that it really imposes a tremendous burden on the courts as might appear to be the case. This is aside from the question of the good faith of individual judges which of course is a basic question and it exists everywhere.

Lawyers from time immemorial have sought to have cases tried before this judge rather than that judge because of what they assume to be the case with his predilections and predispositions, and this we will also always have. I don't think that the judiciary's record thus far, even in school cases, has been entirely black or entirely gray. I think that we've had what you might assume to be the normal amount of variation from court to court.

I would like to ask for legal comment on two very factual matters. In the case where the State's day in court is deferred until after the election and some system is provided for holding up the counting of a vote, is my feeling that the use of voting machines makes this incredibly complicated and difficult an erroneous belief or is it not? And, second, what provision, assuming we had Federal elections only covered, is there for overcoming the dangers which Mr. Rogers suggested might occur of eventually having a sequestered and separate Federal ballot which would be for Negroes only? In other words, we would have a separate and unequal ballot resulting from our law providing only for Federal election coverage.

Professor CRAMPTON (University of Chicago Law School). I am not going to be immediately responsive to your question, as I have some other comments to make. A number of very broad issues have been raised, all very important ones. It seems to me that several of them are clearly policy matters on which the legislators have to make their own judgment. For instance, Professor Estep's proposal of an entire Federal election system. My own policy predilection would be that this is both unnecessary and unwise at the present time. Nevertheless, it is one of the available alternatives, of course.

And then the suggestion that perhaps the proposal should be limited to the Federal elections only and not the State elections. But here again it seems to me that the advantages of a combined approach to both State and Federal elections are overhelming, and that unless the technical difficulties which Professor Nathanson, among others, mentioned, are so great as to really endanger the viability of the system, the combined approach of State and Federal elections I think would be wise. But here again is a basic policy decision that the legislators have to make. Lawyers may be able to give you advice on how to draft the legislation to meet constitutional or practical problems.

I would also like to agree with both Professor Foster and Mr. Silard on this matter of the State's day in court. It doesn't seem to me that if it is postponed until after the election takes place this necessarily raises the question of the validity of each and every election for every office. It could be set up so that the finding of the referee or of the registrar, whichever proposal is accepted, has prima facie validity in the district court much as many administrative orders do today, and it merely puts the State, as Professor Rutledge said, in the position of being a plaintiff attacking a specific vote which may go to some offices, may not go to other offices, and in any case will probably not upset the results in the election, although in some cases it might. But if it did, then the office could be changed at a later point.

But I would like to raise several other doubts which I have about some of the legislation which has been proposed and which hasn't been dealt with really so far in the discussion. And perhaps I could state these as a comment on some of the points that Mr. Silard made. And they also raise issues which Senator DOUGLAS has mentioned.

One is the use of the judiciary all the way through. I think myself this is very unwise for a number of reasons, both practical and theoretical. I do not think that our Federal courts are in a position to run the affairs of a great nation, nor should they be put in that position. They are already engaged in somewhat kindred functions in relatively narrow circumstances such as the bankruptcy jurisdiction. They are already engaged in the organization and the administration of the school systems, at least in the South. Now the voting proposals are made. I think it's a passing of the buck of the responsibility which belongs on Congress and the Executive. The courts will lose the respect of private citizens if functions which are essentially nonjudicial are heaped on them repeatedly over a period of years. The court should be restricted to the traditional judicial functions.

Moreover I tend to agree with the implication of Senator DOUGLAS' remarks that it is likely that an administrative or executive agency will do the job better, that there will be less delay, that it will work out in the long run much better.

Another point I would like to make, which I think also goes really to the functioning of courts, is what I think is really an evasion of the constitutional requirement of a jury trial that is involved in the use of the contempt sanctions. Now it is true that the Supreme Court has spoken on these issues and seems so far in other contexts to validate the use of the contempt sanction as a substitute for criminal prosecution. But it seems to me that if constitutional amendments are to be spoken about, that perhaps one that should be considered, particularly if legislation is going to take the lines of the Attorney General's proposal, is a constitutional amendment which would make trial by jury not necessary in offenses involving racial discrimination. That, it seems to me, is what everyone is talking about here. They are attempting to replace a constitutional right on the basis of fears that

juries in the South will not function properly on issues of voting discrimination.

It seems to me that the popular sentiment all over the country against restrictions on voting rights, as manifested by the unanimity of the Civil Rights Commission, makes a strong argument for at least the attempt to try out the use of criminal penalties first, before the switchover to the exclusive use of contempt sanctions.

Mr. EDELSBERG (National Civil Liberties Clearing House). I'm glad the discussion has taken a turn which reminds us that while the legal doctors are discussing how to operate we ought to take another look at the patient. Now as I see the patient, what the Civil Rights Commission did last year was not so much to unearth new facts, but really to remind us again of notorious facts of mass disfranchisement that were well known to most observant Americans. Of course, the Commission put those facts on television and made it impossible thereafter to sweep the mess under the rug. It touched the American conscience. Voting disfranchisement is no longer a necessary evil in American life.

But the great contribution of the Commission as I see it was to remind us, and I would say this to Professor Cramton, that voting violations are not a matter of individual willfulness. It isn't the hanky-panky that an individual registrar uses with an individual Negro. It isn't even economic intimidation or other forms of intimidation. It's the very climate of hostility and antagonism in the South which is responsible for the disfranchisement of millions of American voters. And as I saw it the great good of the Commission's report was that three southerners—three representative and distinguished southerners—joined in saying that these were the facts. Then two of those southerners had the courage to say—to remind us of a rule of fundamental political equity, that where the violations are wholesale and systematic, the remedies cannot be retail and haphazard.

The unfortunate fact is that most of the remedies that have been discussed are haphazard and retail. Now I'm afraid that this is necessary given the present political climate. For what it may be worth, my political judgment is that the Rogers proposal is the vehicle which will become the serious object of congressional consideration and probable enactment. And we should devote ourselves to seeing how we can take this Rogers proposal and make sure that the Negro under it doesn't have to run a gauntlet, that he is given a kind of protective atmosphere in which his right will be asserted, and to the largest extent possible, as Harris Wofford said, that his qualifications shall be examined in a manner no more cumbersome and complex than that accorded the average white voter of the South.

We must remember that the problem is exacerbated by the kind of judges you have in the South. I don't mean to disparage the judiciary, but I think it is fair to say—to borrow a phrase which I think is well known in this environment—that some of these judges are suffering from invincible bias in this area, and for those judges no form of legal draftsmanship will do very much good. But for the great bulk of the southern judiciary I think the kind of bill proposed by Rogers will permit the wholesale enfranchisement of Negro voters, because the local registrar who is approached by a Negro applicant during the pendency of one of these hearings is acting under the threat of a contempt citation. And if he is captious and frivolous in trying to keep that Negro actually from going to the ballot box, a vigorous judge of integrity will see that he pays a price for it. And I think that for the greater part, the kind of procedure contained in this administration proposal will serve to provide for the franchisement of Negro voters.

My great reservation is this: I think I recall back to the days of section 7(a) of NIRA, Senator DOUGLAS. This was the Magna Carta of labor. The Government announced that there is now a Federal right for people to join labor unions. But just nobody got to join these unions until the unions got together with some agreeable Government officials who said it would be all right for the unions to put up signs in a mining town saying, "President Roosevelt wants you to join the union." And I think that we won't lick this problem of mass disfranchisement until we have something like that on our political scene, Senator DOUGLAS. Now it may be that as a result of that kind of political intervention some people who are not quite qualified to vote will get to vote. But I think the faster they get to vote the faster they'll get qualified.

PROFESSOR HARRIS (University of Michigan Law School). I would like to address myself to a problem raised before, which I think is a serious one. If the remarks aren't of world-shattering policy importance perhaps there is some legal help that can be given here. It strikes me that there is a need for simplification if this isn't going to be the full-employment bill for attorneys and if the limited resources of the NAACP and the Justice Department are ever going to accomplish anything significant. It strikes me you can break down the legal problem into two halves. First there is the question of making the initial determination and then of whatever review is necessary, whether or not there is a registrar or referee, call him what you will.

The second problem after it has been determined is to know which individual Negro voter applicant will be accepted and what possible review there may be of that. I don't direct myself to the second question which most people have been discussing as I agree with the general tenor of the remarks. Everything which will simplify this and postpone review until subsequent to the election is desirable.

Rather I address myself to the first question: what can be done to simplify the original decision as to whether and where and when a registrar or referee will be appointed. I think the Yale memorandum here, if I can so name it—I don't really know what it's title is—between pages 3 and 10 treats the problem better, more comprehensively, more intelligently, treating both the administrative problems, the constitutional problems and practical everyday problems that come to your mind, then anything I have seen on the subject. I don't care to recapitulate it, I only urge everyone to give it serious attention.

In particular, the kernel of this nut is on page 6, in the last paragraph of page 6, after the authors have criticized both the Civil Rights Commission proposal and the Attorney General's proposal, making the point, however, that the Attorney General's proposal raises far more difficulty than the Civil Rights Commission's. And this is true because by making this decision basically a civil action in the Federal court, we reach all the problems of due process, res judicata, and Federal appellate review which are unnecessary if it is handled in a different way.

In the Yale proposal, here I quote, "We see no way of accomplishing this,"—"this" is the appointment of the registrar without undue complexity, litigation, expense, etc.—"We see no way of accomplishing this, except by delegating to the President authority to appoint a registrar in any election district where he has reason to believe that citizens are being denied registration on account of race, religion, color or national origin." This is not requiring the finding of a pattern, which would be incredibly difficult as people know as soon as a certain amount of sophistication is brought to disguising the pattern. This, if you read further you will find, will virtually eliminate all appellate review of this particular question. The State's review I believe will come solely on the question, the second question, of whether an individual voter who has already voted can cast his ballot. But there will not be a dual review: First, should we have a registrar? Second, in his action in regard to each individual voter proper or improper? I urge this simplification whichever bill is adopted.

One last remark, if I may. To avoid constitutional problems the Yale memorandum, the Yale proposal here, restricts itself to Federal elections. This is not because the other is not desirable. I suspect that in order to accomplish what they are attempting to do in stripping out the review of the appointment of the registrar, it is necessary, and I'm no constitutional expert, but I suspect it is necessary if judicial review of the question is to be avoided, to restrict the scope of the bill to Federal elections.

Let me urge that if this simplified appointment of a registrar is not adopted, then by all means let's cover State and Federal elections both. On the other hand if a political decision is made only to cover Federal elections, let us take what legal advantage we can of that decision, to throw out the necessity for a dual review, first, of registrars, then of the specific acts vis-a-vis each voting applicant. Thank you.

Notre Dame Civil Rights Conference—Part 7

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

Mr. SILARD. I'd like to address a remark to Mr. Edelsberg's comments. I'm a great believer in Mr. Edelsberg's political intuition, but I would question a technical point he made that the vehicle for a bill this year can be the Rogers proposal. I have examined the political complexion of the House and the Senate and I find a considerable preponderance of Democrats in those bodies. I also find us in an election year. I think these two factors dictate that we talk the substance of the Attorney General's plan rather than terminology—referee, registrar, or something else.

And on the substance of the Attorney General's proposal, has he not made three sound points to the country which it is too late now to go back upon? The first of these is that there is something wrong with a nation of this caliber recognizing a problem of this caliber, and then moving only to meet it at the level of congressional or Federal elections. Now I think he has made a very sound point there that just simply cannot be swept under the rug. If Congress for the first time is really going to move in to cure this evil, how can it cure only a half or a third or a quarter of it? I think this point simply dictates the acceptance of the Rogers proposition that if you're going to do a job, do it all the way.

The second point that the Attorney General makes seems to me equally binding. There ought at some point, before a Federal

mechanism preempts the entire State registration machinery for X number of persons, there ought at some point before that is done, be a fairly respectable adjudicatory finding that there is a need for that mechanism. Now I don't say that another commission couldn't do this job, but aren't the courts really, as the Attorney General said, the appropriate agencies for making a finding that there is a wholesale violation of legal rights. I think it is a contestable point, but I think the Attorney General has the better of it in starting his mechanism in the judicial machinery. You may not have to stay with it with respect to the appointment of your officials, but don't you really want to start with the rather established and secure judicial safeguard that a court finally determines there is a pattern or practice or a systematic denial of rights.

And finally I think the Attorney General's broad concession, which we have gotten away from—his broad concession that these officials that he contemplates are going to be able to register individuals quickly, effectively and ex parte, provides, with the acceptance of his other two points, a workable basis for a bill.

There are two other problems that have to be met. There is some unhappiness about the judicial appointment of what really now looks to be an administrative official. There is considerably more unhappiness with the full day-in-court, which might be 3 years in court, afforded with respect to each individual before that individual can actually get to vote.

Mr. EDELSBERG. Will you spell that out, John? Why do you think it could possibly take that long on an individual application?

Mr. SILARD. Rather than spell it out, Herman, I think I am willing to say this: I will concede that the process will only take 60 days, but that I would say would be too long to get the job done. Because what we have forgotten is that this job of enrolling people through a Federal mechanism is going to be valid for only the particular election involved under the Rogers proposal, and it is extremely difficult to make it anything else. In other words, the problem here isn't that it might take a year or two to get persons enrolled and then they will stay enrolled. That enrollment will not be valid for 1 day longer under the Rogers proposal than the State enrollment mechanism. So that 1 year's delay requires the initiation of the process all over again. And as I stated earlier this morning, it seems to me that if in a 60-day period before the election—which period the States can quite validly make the binding period of registration—an individual must go first to the State official, then to the Federal official, and then the State can, in an adjudicatory hearing before the court, which Mr. Rogers has conceded is required, then challenge each individual enrollment by the Federal referee—assuming there are hundreds of people, I think you have simply passed the date of the election.

Mr. EDELSBERG. It would be useful to me, John, if you gave an example or two of what the local State officials could say about a recommendation of the voting referee that John Doe be registered.

Mr. SILARD. The delay does not seem to me, Mr. Edelsberg, to be a delay which flows from the period of time that each individual case takes to be adjudicated, but rather the delay which flows from the fact that you may have to subpena—that the State will obviously have the right, I believe, to subpena—each applicant at such a hearing, and when you have to subpena even 150 or 200 persons to take the witness chair in such a proceeding and be asked for instance, "Did you or did you not try to enroll in the State system?" the Federal courts would take approximately 1 month, I think, to hear 30 witnesses.

Mr. EDELSBERG. John, don't they first have to file a verified statement with the court saying that John Doe did not try to register with the local officials?

Mr. SILARD. Surely, but will you deny the State irrevocably and finally the right to contest the validity of that? Will you deny the State the validity of that?

Mr. EDELSBERG. Once, John, just once. That's a constitutional requirement.

Mr. SILARD. Well that once, I'm afraid, if it comes before the election, will be just once too long. Unless someone can offer a reason why the State must have its day in court before the election on individual registrations, whereas in 170 years it has never been the case in the State system, I don't understand what, if any, problem there really exists in holding off the State's day in court until after the election.

Mr. EDELSBERG. I'm with you on that.

Senator DOUGLAS. Well I would like to ask you if there would not be a further right to appeal from the finding of the district court to the circuit court, from the circuit court to the Supreme Court, and that during that time could not the matter be in suspense without any decision?

Congressman BRAY. I don't know all the answers in this matter or I wouldn't be here. I came here to get them. I do want to say that I personally was interested in the remarks of Professor Cramton. Without going into detail on the subject I believe that a jury trial—while it may be necessary in time to do away with it—I view with a great deal of suspicion doing away with a jury trial unless it's absolutely necessary.

Then I do want to comment on the remark made by Professor Estep when he suggested turning over the election process to the Federal Government. That's going to be a very difficult matter. We have in Indiana 35,000 election officials, and anyone who has ever had the job of trying to get an election board together knows it's a tremendous job. And we have something like 10,000 registration officials. At least in southern Indiana each precinct has one Democrat and one Republican registration officer to make sure everyone is registered. It's a tremendous job to get it done.

And it just entered my mind that—maybe it won't work at all—just as I was sitting here, that if you would have your referees go in and allow really a double process of registration, anyone could go to the regular registration office if he wanted to, but then in key places anyone who believed that they were not being given a fair break could go there and register. And then a certain length of time before the election that Federal registrar must turn these names over. Then they would have a certain length of time, a very few days, to object to it. That is not going to solve it all, but you're going to have a tremendous job if the Federal Government tries to take over the 35,000 members of the election boards in the State of Indiana and 10,000 registration officers.

Dean O'MEARA. Professor Estep wants the record to show that he is not in favor of having the Federal Government take over the entire election machinery.

Professor ESTEP. Thank you.

Mr. CALHOUN. I would like to address myself to the suggestion that in the Rogers proposal at this time there is a likelihood by reason of the necessity for permitting State challenge that an applicant for registration would not be allowed to vote in the first election following a finding of qualification by the referee. I, myself, see no reason under the Rogers proposal why a Federal district court to whom had been certified a qualification of an applicant and who found that certification coming up to him on the eve of an election could not order the election officials to take an impounded ballot from the applicant and then let the State thrash it out as it would.

Senator DOUGLAS. What about voting machines?

Mr. SILARD. Senator, you repeat the question asked at this end of the table about the voting machines. I think under present laws, as far as we can tell, there are already mechanisms, even on the machine system of voting, available by which a vote may be registered and yet held subject to the determination of a challenge—the Louisiana law, for instance, so permits. If it does not now permit this, it certainly is a mechanical problem which modern science can solve.

Mr. HARRISON, administrative assistant to Congresswoman GREEN. I would like to offer something of a compromise between the suggestions for Federal assumption of the whole election process and the proposals for a person-by-person registration in cases, as provided in the Rogers bill, where deprivation is pursuant to a pattern or practice. What about the idea of making a determination, subject to appeal before the date of election, that access to the polls in a particular defined political area is subject to discrimination as a pattern or practice; and then in that area requiring all voters to proceed through the Federal registrar pattern.

This seems to me, among other things, to meet the Attorney General's objection to the registrar proposal, in the sense that this does not leave us after the election is held with a box of ballots cast by unchallenged white citizens and a box of easily identifiable ballots, cast by citizens who have had to avail themselves of a separate procedure. Is it possible for us to replace State officials only in those areas where, by a judicial determination, a pattern of discrimination is found to exist—only there to establish a universal Federal registration, and only there for that one election?

Professor NATHANSON. I just wanted to follow up that question with another one which is perhaps an attempt to answer the earlier question that I raised with respect to the problems of choice here. I wonder whether it's possible to have an eclectic approach which permits an alternative group of remedies, some of which may be applicable and usable for the purpose of Federal elections and others for the purpose of State elections. I would still think that the suggestion just made with respect to taking over the election entirely by Federal officials would be really practicable and probably only legal—although I won't go so far as that—but would only really be seriously possible with respect to the Federal election. But perhaps that is not a reason why it should be entirely discarded. Perhaps it could be available to that extent and other remedies available where the Federal election was not involved.

Similarly, I wonder whether or not it is possible to combine the administrative and the judicial processes here. I would agree with the comments that have been made about the undesirability of saddling the judiciary with the entire responsibility here. I don't know, but I would think that there is grave danger that we are separating the Federal judiciary from the rest of the community, that we are asking them to bear—to really carry—too much. They've got to have some other support, and it's got to come through the executive administrative machinery.

Now we know that there are various devices for combining these things and for having these types of alternatives. Without going into details, I wonder whether there might not be some use in having all these alternatives in one bill.

Mr. FOLEY. I was going to suggest to Senator DOUGLAS, on this problem of voting machines, I think you will find, if you check your State election laws, that you already have established by State law procedures for challenged ballots. For instance in New York where they use voting machines, a challenged ballot doesn't go on the machine—it goes on a paper ballot, and that is subject to review by your board of elections the same

as your absentee ballot. I don't see any practical problem.

Senator DOUGLAS. May I ask if there is any reply to my question about appeals.

Mr. FOLEY. Senator, I think that we should keep this procedure in line. It seems to have gotten off the base. Under the Attorney General's proposal, when the referee makes his findings and files the report with the judge—now keep in mind we have not issued a decree here in this case as to this new applicant—the most recent proposal from Mr. Walsh was that service is made upon the interested party. He has 10 days in which to file exceptions to that proposed report. Now if he fails within 10 days to file his exceptions then he's precluded from taking issue with that.

Senator DOUGLAS. But suppose he does file his exceptions?

Mr. FOLEY. Then it's up to the judge to determine whether he wants to hear it himself or whether he wants to refer it back for further hearings on the exceptions. Now the judge is bound by the clearly erroneous rule, and the burden will then shift upon the election official to prove his case before the judge. He just can't come in and say, "I except." He's going to have to back it up. Now if the judge refuses him, of course he's entitled to go up on appeal. Whether the court will accept it or not, he has to have that record on which to predicate it. And I think under the Attorney General's proposal he has a very difficult burden of proof there.

Professor DUKEMINIER, University of Kentucky College of Law. There's one problem which hasn't been discussed and none of the bills seem to meet it. And that is, all of the bills are related to voting in one election. Once these people get registered, will they have to go through the same fight through either a referee or registrar each election that comes up, which is every 2 years with respect to the House of Representatives? Is there any way that the bills could be revised to provide that once they qualify that they can stay qualified rather than to require them to fight every 2 years to be reenrolled?

Mr. CALHOUN. I would like first to address myself to the problem that I think is bothering Senator Douglas. He keeps asking about the appeals because I think he feels that people will lose their vote while this judicial process is working itself out. Am I correct in that Senator?

Senator DOUGLAS. Yes, you're exactly correct.

Mr. CALHOUN. Well, I tried to answer it earlier. My thought is that as soon as a referee certifies to the judge that an applicant is qualified and if an election is imminent, it is within the power of the judge to authorize that person to vote on an impounded ballot. A person can vote and if it takes 3 years and 30 elections, each time that fellow's vote will be accepted—if it takes 3 years to exhaust the judicial rights of the State. But that man will get a vote every time there is an election there. And if the State is correct in its challenge, then the impounded ballot will not be added to the total; if the State has failed, the ballot will go and the totals will reflect the ballot.

Now if the Congress wants to make that more clear than the mechanics of the Attorney General's bill do, it is perfectly free to do so. There is a hazard, and nobody's mentioned it here today, in making a too carefully articulated scheme within this bill, because what you may be fashioning is a straitjacket.

Professor RODES, Notre Dame Law School. I would like to mention a couple of technical points that I think need a little more consideration. There has been a good deal of tlak about the State's day-in-court. I question a little whether the State is entitled to a day-in-court, or how much of a day it's entitled to if it is. Now as far I can see, the only thing to prevent the Federal Government from taking over as much of the election procedure as it has to is the 10th amendment. The only case I know of on the point is *Massachusetts* v. *Mellon* which seems to hold that the State has no standing to enforce the 10th amendment. So that if anybody is to be entitled to litigate over this, it shouldn't be the State, and I begin to wonder who will be entitled. Which brings me to another point. I question, in view of this, whether the courts will find a case or controversy if they are given this job to do.

Professor CRAMTON. I'd like to speak to both of those points and also about what was mentioned over here about fashioning a straitjacket. It seems to me that if the court is used and if the court is so tied up that it does not have any discretion on what it does—that it automatically has to allow the person to vote and have the vote impounded, as put in mandatory language—then it seems to me the question about case or controversy in such a judicial function might be raised. It would be a serious one.

Now I don't want to say that it would be decided adversely—the validity of the registration—it probably would not be. At least an issue would be raised whereas with the wider discretion of the district court there is less likelihood that this question would be decided adversely as to the validity of the legislation. But this does pose somewhat of a dilemma. The southern judges—some people do not want to confide discretion in them. On the other hand, if they're used but they're given no discretion, there would be a very legitimate argument that it would not be a judicial function. They would be just performing a ministerial duty which is not a proper function of a constitutional court in the United States.

JOHN FEILD, Legislative Assistant to Senator HART. The context in which we are discussing the current proposals for further legislation on voting is apparently that the Attorney General and the Commission on Civil Rights—and I presume other knowledgeable people who have observed voting denials in the South—believe that the 1957 law has failed, or at least has been so encumbered or is so inadequate that it must be further implemented. In view of this, and particularly in view of the experience of the Attorney General's office and in light of the question that keeps recurring, I'm wondering if Mr. Calhoun could answer the question: Why is it that we should further utilize the machinery of the court itself, which is apparently the machinery of the 1957 act only, by now burdening or by now placing upon them the responsibility for supervising referees actually operating the election process?

Is it not possible that the registrar proposal of the Commission and the current proposal of the Attorney General are compatible to the extent at least that, given an initial judicial finding, the appointment—the implementation of the operation of the machinery may still be moved to the Executive—moved to the President? Isn't it possible to make these two proposals compatible if we do that? Why must the court do this?

Notre Dame Civil Rights Conference—Part 8

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. YATES. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

Mr. SILARD. I'd just like to add that I am tremendously encouraged—and no one should fail to note—that the Department of Justice seems now to be in a receptive frame of mind with respect to Senator HENNINGS' announcement that the solution to the problem of nullifying delay—judicial delays—may lie in postponing the day in court until the day after or the day of the voting. And therefore, if this does represent, as it seems to represent, the position of the Department, I would like to ask, whether it really makes much difference in Mr. Calhoun's mind whether Congress leaves it permissive with the district judge as to whether he shall postpone the hearing because of the time involved until after the election, or whether Congress itself states that because the problem is one of elections and the prior practice has been not to have the challenges until after the voting, it might as well write that into the legislation. Because if the Department were to move toward this suggestion—toward the second suggestion—I don't see that there's any remaining area of conflict between the proponents of registrar, referee, and the other suggestions.

JOHN CALHOUN. So far as the moment of challenge is concerned, we think that the proposal of the Attorney General uses most of the time most effectively. From the moment of certification the challenging process can begin, but nobody loses his vote while the challenging goes on. Now if you want to wait until there's an election to start that challenging, if you think that there are valid reasons for doing that, certainly the Congress may do it. But I don't know whether it can do it by saying that this protects the vote. Because the vote can be protected under the present arrangements.

Mr. EDELSBERG. I'd like to hear from some Devil's Advocates on the proposed Walsh amendment of the Rogers proposal. As I read it I find it very difficult for a local registrar who has the most malice possible in his heart to buck the recommendation of the voting referee. He has to submit to the district judge a statement under oath giving the basis of his challenge of an individual who has been certified as eligible by the voting referee. On what basis can a registrar say under oath that the voting referee has erred in making his recommendation? Let's see what obstructionist tactics are available under this procedure. I think they've been cut down pretty successfully. I think the difficulty is the willingness of the judge to carry out the law, rather than the detail of this procedure.

Professor BRODEN (Notre Dame Law School). I would like to urge Mr. Calhoun to consider very seriously the problem of the validity of the original appointment of the referee to register any comer. This was raised early in the discussion and I don't think it has really been fully and adequately disposed of. Now maybe by legislation the Congress could give such broad power and broad authority to the U.S. district judge, so empowering him when there is a general finding of racial discrimination. But the obvious tactic has already been employed time and time again: The perpetrator of that conduct resigns and a new man, not guilty of this conduct, replaces him. Now how valid will such an appointment be under present statutory language?

I don't know whether and to what extent we will be able to avoid this problem if we retain a judicial remedy. I think it can be completely avoided by an administrative remedy. I would most strenuously urge Mr. Calhoun to suggest to the Attorney General the possibility of working in an administrative remedy. But I don't know how

committed the Attorney General is to an exclusively judicial remedy.

DEAN O'MEARA. Congressman DINGELL and Professor Foster have both indicated that they would like to be heard. Afterward, in order not to keep luncheon waiting too long, we'll recess.

Congressman DINGELL. I want to point out that in all cases under these proceedings, regardless of what happens, we will not be dealing with impecunious, incapable litigants not represented by proper and able and devoted counsel. I want to point out some perils that I don't think anyone has here expressed and perhaps may not have even thought of. Regardless of the amount of judicial review and whether it takes place previous to or subsequent to the election, we have to remember that people who are willing to close their school systems will not be reluctant to, in effect, snarl up their State governments and to snarl up Federal elections to preserve and to protect the status quo which they seek to preserve.

I think I could point out this as an example: Assuming that an election were to come under challenge after it had been conducted, either under the Federal registrar proposal or under the referee system. And assuming for the sake of the argument that review were commenced either before, during, or after the election had taken place. The officer who would be elected would presumably take his place—let's say if it were a Federal election, in Congress, or as Governor—sometime immediately following the first of the year, usually around the 3d or 6th of January or thereabouts. If this happened, what would be the situation if the matter were in litigation? Who might, for example, be Governor of the State succeeding the Governor who was leaving office while the determination as to who was the new Governor or how the votes should be counted was made under either the Federal registrar system or the referee system? How would we face up to the determination of who was the Congressman or the Senator under these situations? I think that serious thought had better be given to problems of this sort. This is not an unlikely thing and it is certainly not unforeseeable in view of the previous record.

I would again strongly urge that a self-executing system be adopted, at least in Federal elections, to assure that the matter can be handled expeditiously, and that it can be closed conclusively, rather than to bog the courts down in litigation which will go on ad infinitum, which not inconceivably could happen. I would also point out that the courts now carry—the Federal judiciary carries—a burden which in many instances takes 1, 2, and 3 years to bring a matter to trial even in the court of first instance and in cases of review matters have been litigated for as long as 10 of 11 years.

Professor FOSTER. I'd like to speak quickly to the point that Mr. Edelsberg raised with respect to the kind of question which perhaps might be raised by a local registration official charging that the referee or Federal officer had been derelict in his duty. The proposals, most of them at least, direct that the person shall be certified to vote provided he is qualified under the State law to do so. The recommendations of the Civil Rights Commission spoke—or the findings, rather, of the Civil Rights Commission—spoke of the problem as being one not of discriminatory registration laws in the South, but rather of fair laws enforced in a discriminatory manner. In short, I take it that a problem is that when a white appears to register he is registered without any questions. When a Negro appears to register the law is thrown at him as hard as it can be thrown. It seems to me that a very real question is going to confront either a Federal referee or a Federal registrar, whichever it may be, in trying to decide by how much he must discount the requirements of the State statutory law in holding these people eligible to vote. I would assume that if we're going to do it equally, he should in effect turn his back on most of the literacy tests, if indeed it's shown in that area that the registration officials turn their backs on the literacy tests with respect to white applicants.

This, it seems to me, is going to be productive of a great deal of difficulty with respect to ascertaining the standards by which any applicants are registered by some court-appointed or administratively appointed officials. This is a real problem. I can see, therefore, that these affidavits which the local officials would insist upon would challenge the fact that you are not really applying the law as it is written to these people, setting up this factual dispute. In effect the local officers would say, "I threw the book at everyone." And here comes your issue. This, it seems to me, is the way in which it's likely to arise. There may be other ways as well. The second point——

Mr. EDELSBERG. Excuse me. How does he put this in his verified statement to the judge? What can the registrar say to that?

Professor FOSTER. Well, I would suppose that if we had a conscientious referee who, after diligent inquiry, had discovered that there were no literacy tests whatever being given to white applicants, if he were conscientiously giving equal treatment to the Negro applicants he would impose no literacy requirement either. In short, if the statute would normally be read to require this kind of thing, and he had not been doing it with respect to the whites but had been doing it with respect to the Negroes, I can see where the Federal officer would be in considerable grief with respect to the amount by which he would have to turn his back. In any event, I think that this kind of allegation could be made, if it does not appear within the record of the referee's own action, that he had not required any literacy test whatever.

May I make a second point quickly? This goes to the point made by Mr. Broden of the Notre Dame faculty a few minutes ago. I think that a very good case can be made for changing 1971—this is the section in the code that we've all been talking about here, that authorizes the United States to bring suits against local election officials—to provide that these actions by the United States should be brought against the election board as suable entities.

Now this is a legal fiction. Nevertheless the law has in numerous instances permitted suits against partnerships, corporations and various kinds of legal entities, for the purpose of singling out the office itself and binding any subsequent holder of that office to whatever determinations are made with respect to the manner in which the office has previously been operated. If therefore the statute in 1957 had provided that the suit might have been brought against a board of election registrars of Macon County, Ala., we would not be in the Supreme Court of the United States in *The United States* v. *Alabama* right this instant, for the whole issue in that case is whether that election board may be treated as a person within the meaning of that act. In that case every single officer of the office has resigned. Now if you treat the suit as one against the offices and entities, this it seems to me obviates that kind of problem.

Dean O'MEARA. I've been wondering how long I would be able to resist the temptation to step out of my role as chairman and take part in the discussion. The moment of capitulation is at hand.

I do want to say just a word about a problem that is troubling Senator DOUGLAS and Congressman DINGELL, and I think others. It's the problem of delay inherent in any plan which requires a court finding before a Federal registrar or referee or whatever he's called is appointed, and in permitting at some point after registration by this Federal official a further judicial contest of the propriety of registering this, that or the other individual. Now I think that a great deal of delay is involved. The point that I want to make is simply this: We are not, we should not be, concerned simply with working out a bill which would be the best of all possible bills in an ideal community, but a bill which will work as well as possible given the actual situation that exists. A great lot of education is going to be needed—a great lot. The law can't do all the educating, but it can make a substantial contribution to the educational process. So that, so far as I'm concerned, the fact, and I think it is a fact, that in the early years of Federal intervention along the general lines we've been talking about, the fact that there will be long delays is not a disadvantage: it's an advantage. It's all to the good. In short, I think our concern ought to be to make haste slowly. We're now in recess until after lunch.

* * * * *

Dean O'MEARA. Ladies and gentlemen the conference is again in session. Now since we have two subjects in addition to the voting rights problem which deserve discussion, it has been suggested, and it seems to me to be a good suggestion and I shall act upon it unless there's some objection, that in the last 30 minutes which we are now entering—the last 30 minutes of the discussion on the voting rights problem—we will concentrate and I ask each of the speakers, each who wishes to speak in this last 30-minute period, to address himself to one or other of the five points which Mr. Silard suggested at the beginning are crucial. May I read them to you:

1. A judicial finding of a pattern or practice of racial disfranchisement prior to appointment of Federal registration officials in the locality involved.

2. Federal registration of persons in the disfranchised class by a process no more onerous than the State registration procedure.

3. Federal registration made effective both for Federal and State elections.

4. Availability of Federal injunctions to insure that those registered will be permitted to vote.

5. Provision for State challenge of Federal registration at a time and in a manner which cannot, by delay, defeat the right of those enrolled to cast their votes in the election.

The suggestion which I have embraced is that those who speak in this final 30-minute period address themselves to one or another of those points, speaking either for or against. The matter is now open for discussion.

Professor CRAMTON. I would again like to reiterate the concern I mentioned this morning, about really point 4, the necessity for the availability of Federal court injunctions and the use of the contempt procedure of enforcement. It seems to me this is a vital and important question, involving the replacement of normal criminal procedures in a whole large area of conduct.

It seems to me it's a little unbecoming for any liberal to take the position, for instance, that abuses in congressional investigations really involve punishment without judicial standards, and then to turn right around and say that the constitutional requirements of a jury trial in criminal cases do not apply to this whole category of unlawful behavior. It really seems to me improper and unjustifiable. Adequate grounds have not yet been shown and established for the inadequacy of criminal proceedings to safeguard violations of a person's right to vote. Until there is a period of experience which demonstrates the inadequacy of criminal sanctions, this far-reaching measure, which I think would raise serious constitutional questions

and jeopardize a basic American liberty should not be adopted.

Mr. SILARD. It does not seem to me that in providing for injunctions to enforce the right of these persons registered to vote that you imply that the injunctions will be violated. Or, that if they are violated there would not be a jury trial. Certainly the choice is not between either injunctive process or criminal proceedings before a jury. Now as a matter of fact, in 1957 after months of debate a compromise was reached under which a jury trial was provided in criminal contempt cases over a certain punishment level that was then established.

So nothing here implies that we would go back one step upon the ultimate resolution of 2 or 3 years ago. I think that's an unfair charge to level against the principle that there will be injunctive relief available to make these registrations effective. Whether in contempts of court that occur, you are going to have jury trials across the board as we did in 1957, or not at all, that's another issue.

Father KENEALY (Loyola University School of Law). I would like to add to this discussion of the injunctive process the observation that there's nothing unconstitutional about the principle of the injunctive process. There are the rights both of the voter to be considered as well as the registrar who might be denying that right. The odium which the injunctive process acquired chiefly was the abuse of the injunctive process in the old labor cases. There the psychological urge was toward the abuse of the process because the judge who issued the injunctions was the social and club companion of management usually. The psychological pressure here will be rather very much against the abuse of the injunctive process. It will take courage, in view of the very great difficulties under which southern judges operate. So I don't share the expressed fears about the abuse of the injunctive process in the projected legislation.

I would like to add that I would favor very much, without repeating arguments given already today, the participation of the executive department, and therefore the system of registrars, whatever they would be called, rather than referees. I would like to see a heavier consideration of the Black-Emerson-Pollak so-called Yale memorandum, which was dismissed rather summarily as being politically unfeasible. Possibly it is. But I think there are considerations there for streamlining the process that should not be forgotten, or passed over without very serious consideration.

When it comes to a question of whether this shall refer to Federal elections or State elections, there's a tendency on the part of some to say, "Well let's keep it just to Federal elections now. Let's have half a loaf instead of no loaf at all." I would like to suggest that is merely a tactic, it's not a strategy. It's not a principle involved, and the tactic and strategy is certainly open to inspection by segregation proponents. They are well aware of it. My suspicion is that they will seize upon that tactic for very powerful countertactics. They will point out that this is not a bona fide appeal. It's the camel's nose in the tent. It is attempting to do something about Federal elections as a near step to do the unthinkable thing about State elections. The bill, I'm afraid would be charged with being filled with trickery and treachery and what not. I wouldn't be surprised to see Senator Eastland finally link it with sex offenses in the schools in the District of Columbia.

Professor ESTEP. Both as a constitutional lawyer and I would hope much more than that as a person interested in civil rights. I would really hate to see the suggestion that Professor Cramton has made overlooked or minimized in any way. Whether we like it or not, and whether it's constitutional or not—on this I certainly could not argue that the majority of the Court says that it's unconstitutional to have contempt through the injunction procedure—I think it's a very unwise principle and I think that it's such an important one that we ought not to say merely because we compromised on it in the 1957 act we ought also to compromise on it in this new Act.

If we're going to have an injunction procedure, and I think this is probably very important in order to make sure the vote does get cast at least—and then we can decide what to do about counting it later—we at least ought to provide that if we're going to punish somebody criminally, in the sense of a fine or imprisonment in any way, the statute itself ought to provide for a normal Federal, criminal trial with jury, and all down the line. I see no particular reason for drawing the line. I do not think a group such as this or people who back this kind of a bill ought to accept the philosophy here any more than we do in any other setting that the end justifies the means. I think that this is an important procedural thing in this country, whether it is an absolute binding constitutional dictate in every situation or not. I think this is something that is one of the real bulkarks of our freedom, though it is a procedural matter.

Secondly, I cannot help but think that the idea of separating the registration of the disenfranchised group from the registration of the enfranchised group in these areas where color lines are used to draw the line, is basically an unsound one. While you don't have to go clear to the suggestion I was making this morning, it seems to me there's something to be said for finding that this area, whether it be a county, a city or a State, is found to engage in these kinds of discriminatory practice; and then from that finding to say that from this area we are going to set up a Federal registration for everybody or every election in the State or county, or whatever it may be, and that until some kind of a showing is made later on we'll continue to have the Federal registration. Then when we turn it back to them, we'll watch them and see whether they really conduct it hereafter in a nondiscriminatory way.

I think we would solve a lot of the problems that we were arguing about this morning if we could accept the fact that once we make a finding that this area isn't doing a good job, on the registration alone—not the rest of the election, on the registration alone—we would say, "Everybody must walk into this one building and be registered by this one person." He would certify the list to the State election officials. If they want to contest it, give them 30 days to contest it after registration and before the election, and give them their fair procedures and right to witnesses and so on. Then finalize the thing so that we have a list on election day and everybody who is on that gets to cast a vote. Then we can argue later about whether it is counted or not.

I think it is very unwise to try to separate those who were disenfranchised and say "You register in one place" and to those who are not disenfranchised say, "You register in another place." I think we ought to take the bull by the horns and say "For that particular area, let's have one registrar who registers everybody and issues certified registration lists—voting lists, if you will." Certainly I think that it is important that we not postpone his rights to vote, and I think this could be worked out without comprising the other two.

Notre Dame Civil Rights Conference—Part 9

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. MOELLER. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

Mr. YARMOLINSKY (Washington, D.C.) I would like to make one quite specific point and one rather general point. On the issue of the propriety of the use of the injunction process, it does seem to me that the extension of the injunction has been in bad odor, because injunctions, particularly in the classic case of the labor injunction, are used ostensibly to preserve the status quo and actually to decide the issue—because in a typical strike situation if you can postpone the decision long enough you've made the decision.

This is the opposite of the situation which we are facing here. What we're talking about is the preservation of rights which can then be adjudicated after the fact—after the election. I think that this needs to be kept carefully in mind because the use of the injunction process in the preelection period is not settling any questions. It's merely assuring that rights are not taken away by a preelection process.

Now, on the general point, I've been sitting here all through the morning session rather vacillating back and forth as I heard the eloquent arguments on both sides of the question, whether the chosen instrument should be the administrative process of the registrars or the judicial process with the referees. And since one has to make up one's mind at some point, I'm inclined to cast a kind of doubtful ballot in favor of the referees, and for this reason: I think that a good deal of the discussion has given insufficient credit to the flexibility and the adaptability of the judicial process. It's been with us for a long time and it's been effective in a wide variety of situations.

There's a tendency among lawyers, at least in the last ten years, to be scornful about equity, but equity can accomplish anything, I would suppose, and has accomplished almost anything, that the administrative process can accomplish. And I think that this is particularly true when we're talking about the operation of a system that's going to be working largely in rural areas—in areas that are not typical of the kind of communities where we find the pat situations where the administrative process is brought to bear—in situations where we're not looking for the kind of expertise that theoretically you get out of the ICC or the FCC or the CAB, or whatever. I'm inclined to think that it's more natural, more straightforward to stick to the judicial process.

On the other hand, I am impressed by the people here who have said, "Give the Executive some share of the responsibility. Don't put it all on the shoulders of the court." And I think that this is a cogent argument. But I'm not sure whether it is an appropriate argument at this point. If the executive branch of the Federal Government wanted to play, was willing to play—as I hope it will be in the future, but I don't

think it has been in the past—a leading role in securing to the colored citizens their right to vote, the executive department of the Government has all kinds of ways to do so, not only through the Department of Justice, but through the high office of the President, which would put these judicial officers if they were appointed not in the position of the lonely enforcers of what is right and just, but as people surrounded by friends and supporters.

And therefore I'm inclined to think that we can have a judicial referee system with the initial judicial finding, we can have a more flexible, a more natural system and yet we can bring into play the power of the executive branch and the influence and the support of the executive branch of the Government through other means.

If I didn't believe that I would take the other side of the question, because the last point I want to make is that I believe the whole debate here is concerned less with enforcement than with education. I think it was Harris Wofford who some months ago in a very powerful article pointed out that the function of the law here is primarily an educational function, and that this is not a problem that we're going to solve in months or even in years, and that we cannot expect that out of any legislation that's enacted this year we're going to make any radical changes in the voting situation, particularly in the Deep South. But if the law can perform an education function then it will be serving its true purpose.

I am inclined to believe on a very delicate balance this can best be done by a combination of the elements that Mr. Silard has listed here with the use of the judicially appointed referees and the invocation of equity power, but also, and essentially, with a real mobilization of the power and the influence of the executive department of the Federal Government.

Congressman MOELLER. I should like to supplement these fine remarks, Dean, with a little story I heard some time ago. There was a man on the hill in Washington wearing a badge on the lapel of his coat with the initials B.I.K. Someone asked him, "What does B.I.K. mean?" He said it means, "Boy I'm confused." He was told, "Well, you don't spell confused with a 'k'." And he said, "Well, this shows you how confused I am."

I think that a layman listening to the debates and discussions this morning might become quite confused. And as one Member of Congress I feel most definitely that when this issue reaches the House it's going to be extremely simplified when it becomes law, which it probably will, because it's going to have to be something that's very, very practical and that the average man is going to understand.

And it occurs to me that point 3 mentioned before is an extremely important one with respect to the Federal registrar for both the Federal and State elections. Unless this is done, it seems as though an operation might be performed on the patient where the incision is made and then the wound is not sewed up. Possibly the election on the State level is going to mean a lot more to the people today who are denied full citizenship than any election on the Federal level. I think this is the one that's going to cause the greatest problem. It's the one that I think we need to tackle with the greatest of dignity.

Professor FOSTER. The point has been made twice now in the summary by Mr. Silard of the possibility of a judicial finding initially of a pattern of practice and discriminaton, that to be followed by the administrative appointment of registration officials to serve in the executive branch. Since we have such an eminently qualified panel of constitutional lawyers sitting along this bank over here, and over there as well, I'd like to throw a lawyer's nit-pick question at the lawyers on the separation-of-powers problem. The question is whether such a primary determination by the courts followed by a discretionary appointment in a discretionary operation by an executive agency does not run afoul on the supposed limitations on the judicial powers of the United States, as they have been spelled out over years, in limiting the Federal courts to essentially the handling of so-called justiciable cases.

This, it seems to me, raises a question of rather serious magnitude: having the courts intercede at that initial point simply to make a general finding which in turn triggers the exercise of the executive discretion. And if there are those who have any comments either for or against this I should certainly like to hear something spoken to this point.

Professor NATHANSON. Well, I'm afraid I've formulated my comment more in relationship to what Mr. Yarmolinsky had said before, and I want to get that one off my chest. First, if I understood Mr. Yarmolinsky to come reluctantly to the conclusion that the best place to start here is with the judiciary, in other words for the courts to have the primary responsibility, I would like to say that it seemed to me that at least part of his argument indicated a contrary conclusion—that we have here, as he said, a problem of continuing education, mixed with a problem of enforcement.

It seemed to me that this is perhaps most suited for an administrative setup: in other words, grafting on to the educational functions which we already have had exemplified in the Commission and the investigatory functions some further powers of enforcement, which of course for their ultimate sanction will have to have the courts brought in. There isn't any doubt about that. But insofar as we have primarily a long-range job to do here of education and enforcement in a hostile area, it seems to me that the now old-fashioned, but once new, administrative process is the more suitable.

I've had some hestitation, as a matter of fact, in coming to this conclusion because the administrative process is in some disrepute right now, as I well know and appreciate. But, it also seems that this is the kind of situation where it has its best chance, you might say, of succeding, and does not have the additional problems that the agencies like the Federal Communications Commission have had. Here the objective is quite clear. The controlling standard is quite clear. We don't have the problems of formulating a standard out of vague considerations from God knows what kind of policy. It's more comparable to the job that the National Labor Relations Board has had to do when what was an unfair labor practice was fairly clear. It was one of enforcement and to some extent of education.

So it seems to me that if we could work out something along that line—now I haven't thought through all the details, but it seems to me that the details are not insuperable—of using basically a commission which would have its seat of authority in Washington to give it a kind of a central strength, but nevertheless its arms spread out through the country where it is needed—working in that way with a measure of flexibility in the remedies available. Not in the principles that control it, but in its remedies. And of course with the aid of the judicial process for enforcement, and with the conventional aid of a contempt proceeding in a noncriminal situation, so that there would be no problem of a jury trial or anything else. There would be no case of trying to pin people down as criminal. But the main problem is to get a remedy where you don't have to worry about a jury trial and the constitutional considerations thereafter.

Mr. SILARD. I would suggest to Dean O'Meara that the discussion between Mr. Yarmolinsky and Professor Nathanson illustrates that there is not now, and until the last moment of time there wil never be, a consensus as to whether the appointment of the officials to do the job should be judicial or administrative. But I also suggest that it doesn't really make much difference. If there is a basic area of agreement as to what this official is to do, that it is a simple ministerial registration task, and that what he does will be enforcible without delay at the time that the election comes about, I for one am of the opinion—though I personally for instance view the administrative appointment as better—I cannot see that it really makes much difference who does the appointing. The officer you appoint there will probably be the same person in the locality, and this seems to me very little difference—one that should never really divide civil rights proponents, though it certainly will be a divisive issue all the same.

Governor WILLIAMS. One of the most interesting comments I've heard during the course of the day was some gentleman who said that during the war they never got the labor groups unionized until they came up with a slogan, "President Roosevelt wants you to join a union." Well, I don't believe that this administration would go for the slogan, "President Roosevelt wants you to register," and maybe the country at large would be divided on the slogan, "President Eisenhower wants you to register." But this being the time of year, perhaps we could all agree on the slogan, "President Lincoln wants you to register."

Seriously, though, I try to weigh all of the discussion today, including the very excellent talk of Father Hesburgh at lunch, and the problems that I see are rather difficult—and yet if we're going to get any solution it's going to have to be relatively simple. It's not those Ph. D.'s who were trying to register that are going to solve this question. What we're going to have is a lot of people in the backwoods who perhaps don't even know what it means to register, and I don't think that this registration process is going to be worth too much if all it is somebody sitting in a high chair in the back corner of a room waiting for something to happen. I think there's going to have to be some spirit of "Let's get this job done." Now obviously this can't happen unless there's a situation where the local authorities aren't doing what they're supposed to do. But once this finding is made then I think this should be a somewhat more persuasive method than just siting back and waiting for somebody to come in and knock down the door to register.

Those of you who are acquainted with the political process know that registration in the North just doesn't happen by opening your doors and inviting the public to come in. Now how much more difficult is it going to be to make any appreciable dent in the nonregistered in the South. And if what we want to get is a number of Negroes registered so that it will make an appreciable step toward freedom and democracy, then I think we have to have a system that is going to afford some encouragement as well as legal possibility. And therefore I think that we've got to envisage a system which is going to have a responsibility and obligation to get a job done—to be fighting for democracy rather than permitting it to happen.

And so I think of the original suggestion of the Commission—the President. After all it's the President's constitutional obligation to see that the laws are enforced. And if the people can eventually look to him to see whether the United States is performing its obligation before God and the country, then I think maybe something will happen.

So I favor putting it up to the Commission, and perhaps even going as far as my

fellow Michiganite, Sam Estep, has suggested, or "If you're going to move in, move in not only for the disenfranchised, but for everyone," so that you make a clean-cut issue of the fact that you want to get everybody registered. I think that the registration in the States that we're concerned about isn't so good for the white groups—as it isn't for the colored group either. And maybe it wouldn't be a bad idea to come in and get more people registered in Michigan, but I won't go into that at the moment.

Seriously, I do come back to the point that if we want to get this job done, I don't think that you can lay an injunction on the Court to go out and do the job. That isn't their real function in life. Their function is to decide issues, and this is something that is more than educational. This is an operational job.

Since we're all casting our votes here I would cast mine in favor of placing the obligation ultimately on the President and on the Executive, setting up administrative mechanisms so as not only to make it possible, but actually to persuade people to register, so that we can establish the basis for democracy strongly enough so that when it's turned back to the local government it will continue to flourish.

Dean O'MEARA. Our 30 minutes have expired. However, Professor Harris had his hand up before the Governor spoke; so I think that I should call on him.

Professor HARRIS. Many of us seem close to some type of consensus around Mr. Silard's five proposals but for the sticky wicket that seemed to be suggested by Professor Foster: how can we combine a judicial finding with the benefits of administrative proceedings?

I wonder if I could summarize what I seem to be hearing. I gather there's a political necessity, not speaking of a constitutional one, but a political necessity to satisfy the present Congress, that there be a judicial finding of discrimination or of a pattern of discrimination in an area before a registrar or referee be appointed. This seems clear from the Attorney General's position and from much of what Harris Wofford has presented here—the Commission's views and those of various other people. I take it this creates a dilemma because the usual judicial proceeding is not ex parte, or at least it isn't ex parte beyond a temporary restraining order, and the feeling is that the Negroes will not register unless they're permitted to do so ex parte. But the Congress won't vote for something which looks like it's making a sham out of a judicial process by turning it into ex parte proceedings.

And I gather that the attempt to combine the administrative process and the judicial process has raised article-III-of-the-constitution doubts in the mind of Professor Foster and perhaps Professor Nathanson. I certainly don't want to set up myself as the prognosticator who can say when the Supreme Court splits 5–3–1 who's going to be in the 5. But I wonder if the problem is not soluble with a little imagination and a certain amount of expectation that there may be some sympathy in the Supreme Court.

For a solution which does no violence to tradition and which heads for a goal which so many people share, I wonder if the Court cannot, after making the initial judicial finding, retain jurisdiction over the whole problem. I wonder if it can't come us as a class action or some type of a representative suit by the Attorney General along the lines of the Attorney General's proposal. And perhaps we ought to make the State the defendant so that there's no danger that the defendant is going to die, or be abolished or go away anywhere. We still have our parties—the class of disenfranchised Negroes on the one side and the State, whichever State it may happen to be, on the other side.

I wonder if the Congress doesn't have the power—I certainly think it does—to create a new remedy—not a remedy that existed before, but a new remedy. I gather they created declaratory judgments and they can create remedies not yet seen by judges. And the general nature of the remedy I wouldn't care to detail at this time, but it certainly could embody the appointment of an administrator who would perform the way a voting registrar performs in the States. And he would act ex parte as the voting registrars do. And he would issue certificates or maybe he'd issue cease and desist orders—I'm not interested in the precise detail. I take it the district court judge could issue a temporary restraining order on the recommendation of this administrator. And the Negro would go to the polls and he'd vote.

Now the ballots would be challenged—the whole process would be challenged—only at one point. If anybody wanted to challenge the issue—any issue—at the polling place he could do so. The ballots would be impounded and then there would be a proceeding similar to what goes on in the States all the time—very rapidly, in the Federal court which is retaining jurisdiction of this matter.

This is not a sham—the Federal court is keeping jurisdiction. There would be a hearing in the Federal court on all questions: "Is the act constitutional? Is the registrar properly appointed?" Anything you want. Right then and there if you want to appeal, take it to the fifth circuit, take it to the Supreme Court, clean the whole thing up, and then the impounded ballots would be counted.

But I think that you get the benefits of all these things with a little bit of imagination in the drafting. I don't think the Supreme Court would have anywhere near the difficulties which we could conjure up around this table, if we assumed them to have no sympathy whatsoever for the proposal. Thank you.

Dean O'MEARA. Thank you, Professor Harris. I'm sure we could go on and spend the rest of the afternoon discussing the multiple problems involved in the proposed voting rights bills now pending in Congress, and the Commission's recommendations, and although, at this juncture, voting rights seem to have priority because that, no doubt, is what Congress will take up first, and that is the subject in which there presently seems to be the greatest prospect of progress, still there are other problems and, as Father Hesburgh pointed out, all these problems are related and one can't be solved unless all are solved. So it seems to me that we ought to turn at this point to the second item on our agenda, that is, assisting school desegregation.

Notre Dame Civil Rights Conference—Part 10

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. THOMPSON of New Jersey, Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

FATHER HESBURGH'S LUNCHEON ADDRESS AT THE CIVIL RIGHTS CONFERENCE, FEBRUARY 14, 1960

Thank you Dean O'Meara.

One of the members of our Commission, Governor Carlton of Florida, who has a remark covering every occasion, says using these things [faulty microphones] is like trying to kiss a screaming woman. I haven't had much experience at that.

But, gentlemen, we've had a long morning, and I think it's somewhat double jeopardy for you to have to listen to me twice today, although I think I established an all-time record for keeping quiet this morning, after the opening. In this problem, I like to think back to the first day we walked into the President's office to get sworn in. After we had been sworn in and had had the usual number of photographs, he sent everyone else out of the office and sat down to talk with us. At that point he was quite serious and he said: "This problem that you are addressing yourselves to is the most serious domestic problem on the whole American scene today. To the extent that we can solve this problem, we will be worthy to hold up our heads in the company of the other nations of the world—to the extent that we bring some light to this problem, we will be qualified to work on world problems—because it's rather ridiculous to take a world posture on the meaning of democracy and equality and equal opportunity and not to practice it at home." He continued, "I don't know the answer to these problems, and that's why you gentlemen have been commissioned, and now it's your problem. We'll do all we can to help."

With that we walked over to an empty office on Jackson Place into a room that had a dusty desk and six chairs. We sat down and said, "Where do we begin?" It was quite a long trip from that empty office next to the Brookings Institution off Lafayette Square to a front porch in Land O'Lakes, Wis., last summer when we again sat down around a table—surrounded by pinewoods and soft breezes from across the lake—and tried to hammer out a final report for the President and the Congress after some year and a half of hearings and deliberations.

THE GROWTH OF A COMMISSION

I think it was quite an unusual thing and quite a surprise to us, and I'm sure a great surprise to many others as has been remarked here this morning, that we came up with a report. If ever there was a Commission that was dissonant and disaggregate in its composition it was the Civil Rights Commission, with three Democrats, two Republicans, and an Independent, myself; with three southerners and three northerners; with two former Governors of States, two law deans, and two college or university presidents. And yet several things emerged from the year and a half that we met together. I think the most amazing thing that happened was we became very close friends and I think we developed for each other the kind of compatibility and understanding, and even perhaps at times compassion, that was a necessary ingredient in any kind of fruitful solution to this very vexing problem.

Last summer found us in Shreveport, La., trying to investigate the problem of voting in a State where literally thousands of Negro voters were being swept from the rolls. It was a terribly hot place during July. We were greeted as we got off the airplane with papers from the U.S. marshal—a new experience for me anyway. And we were told that our preparation was for naught because there would be no hearing. It was at that juncture, on the verge of the time when we had to get this report written, that we betook ourselves to northern Wisconsin where a kindly gentleman in the past left an estate to the University of Notre Dame, and we sat

down on the front porch, only after having gone out fishing together, and decided that we would try to agree on our findings and recommendations.

I mentioned to the President of the United States when we handed in this report on September 8, that perhaps there was one more dimension that he was unaware of when he appointed this Commission, because it not only had the dissonances I spoke of earlier, but it had had one great unity—all six of us were ardent fishermen. I don't know if the report as it was written could have been written except in a fishing camp where we interspersed our discussions and conversation with a little angling on the lake, and the good Lord was good to us because we caught a lot of fish, too.

FLESH AND BLOOD FACTS

In any event, I remember one night when we sat past midnight, and I am told on reliable authority, that some of the staff stayed up the rest of the night—at least they looked like it in the morning—and we had come to what was really the crucial point of our report: what were we going to do about voting. There wasn't a man of us who did not recognize that there were literally millions of people qualified to vote who were not able to vote and probably would not be able to vote for the next President of the United States, much less for their Senators, Congressmen, and State officials. We had seen some of these people. These weren't units to us. They were flesh and blood people. Some of them were veterans with long months of oversea duty and decorations for valor in service. Some of the people were ministers. Some of them were college teachers. Some of them were lawyers, doctors. All of them were taxpayers. Some were mothers of families who were hard pressed to tell their children what it is to be a good American citizen when they could not vote themselves. All of them were decent, intelligent American people, and yet they could not cast their ballot for the President of the United States.

Some had gone through incredible hardships in attempting to register and had been subjected to incredible indignities. I don't know if any of you in this room have had to go through this experience, but even vicariously we had to go through it in listening to their tales. They would go to a courthouse and instead of going in where the white people registered, they would have to go to a room in the back where they would stand in line from 6 in the morning until 2 in the afternoon, since only two were let in at a time. Then people with Ph.D.'s and master's degrees and high intelligence would sit down and copy like a schoolchild the first article or the second article of the Constitution. Then they would be asked the usual questions, make out the usual questionnaire, hand in a self-addressed envelope, and hear nothing for 3 months. And then they would go back and do it over again, some of them five, six, or seven times, some of them standing in line two or three days until their turn came.

DUAL SOLUTION TO VOTING DENIALS

All of us—I'm sure I speak now for not just myself, but for the southerners and the northerners, the Democrats and the Republicans—we all knew that something must be done about this situation and done as quickly and as simply and as cleanly as possible. I think we really came up with two solutions. One of them appears as a recommendation approved by five members of our Commission, and the other is a suggestion—I don't know what official term you would put on it since it was only approved by the three northern members of the Commission. The recommendation had to do, as you all know, with Federal registrars. Our reasoning was very simple on that point. We simply said that if it was a well-known fact, as I think we had established it, that there were people well qualified to vote—much better qualified indeed than many people now voting in these same localities—then there should be some mechanism known to man whereby this vote could be obtained. And if, as we had demonstrated, it was impossible for these people to vote now—literally impossible under present circumstances, with all the ingenuity humankind will employ to keep a person from doing something they don't want him to do—then it was the duty of the Federal Government under the 15th amendment of the Constitution to see that some means were taken to allow these people to vote. And we felt that this means should not involve great expense. It should not involve human indignity or the fear of reprisal or economic sanctions against these people who want to vote. Somehow these people almost should be embraced by the Federal Government and allowed a little extra privilege, if you will, because of the indignity they have had to endure already in trying to exercise their primary right as citizens. That is how we came up with the idea of Federal registrars.

It was not our thought that this would be an end-all, that this would clean up the situation for all times, but at least we thought that this was an imaginative, creative approach to see that what could not be done on the State level, would at least be assured on the Federal level. We thought that this was in keeping with the Constitution of the United States. I think we demonstrated in our own common act of making this recommendation that this is not a partisan problem in any sense of the word. This is not a Democratic or a Republican issue. It is an issue of the U.S. Constitution, an issue to which every American should be committed, an issue on which the finest intelligence in our land should be prepared to study and act.

So the little Commission that really didn't look like very much to us in the beginning, and looked less like anything potent to us as we went along our way, came up with a kind of bombshell, it seems. As a result, all of us are here today and have had this very intricate and involved legal discussion this morning about the ways and means of accomplishing this end to which we are all committed.

CONSTITUTIONAL AMENDMENT FOR UNIVERSAL SUFFRAGE

I would like to add a postscript. I am not a lawyer—sometimes this is a salvation because you don't see all the difficulties that might come up and you're not constantly preparing for all of the ingenuity that will be marshaled against a law. I would like to mention our second proposal, which was not a recommendation but a proposal by three members of the Commission. I think it should come as a kind of relief to all of you who have spent so much time this morning looking at the really involved state of affairs that obtain when one tries to accomplish on a Federal level that which is not being accomplished on a State level—with all the intricacies of Federal-State relationships involved. We talked this over coming up on the airplane from Shreveport to Land O'Lakes, Wis. We discussed many of the difficulties that have been discussed here this morning. We were trying as hard as possible to find some way, some short-range answer to get the vote for those who are now presently disenfranchised—by the next election if at all possible.

But we thought there must be a simpler long-range answer to this problem. And the answer we came up with was our proposal for an amendment to the Constitution of the United States declaring for all time simply, clearly, undeniably that every American citizen has the right to vote and that this right will not be circumscribed by the Federal Government, by the State or by any individual, and that it will depend simply on two easily proven factors, the age of the person in question, and the length of his residence within a given State, and that Congress will make appropriate legislation to see that this right is honored in all of the States of the Union, and that its only limitation would be by reason of legal confinement at the time of registration or voting.

This, I think, goes to the heart of the problem we have been discussing this morning. To me the seat of infection is as simple as this: that there are literacy tests in the States under question which are being applied in a discriminatory fashion, and as long as man is ingenious and these texts exist there will be discrimination.

There are two approaches to this problem, I think. One is to try to find out some way to direct the ingenuity of man toward a better end than keeping people from voting. The other approach is to ask how serious is the demand for literacy as a qualification for voting in these United States. And here I think we have a very simple answer. I don't have all the statistics at my fingertips, but I can say with all assurance, being in the business of education, that the United States is more educated today than anytime in its history. It is probably the most educated country in the whole world. Literacy is well over 90 percent throughout the Nation and the growth in literacy has been absolutely astounding in these past few years. I think that it is high time that we stood up before all the nations of the world and said a very simple thing; namely, that we believe in democracy and we think that the heart of democracy is that everybody—every citizen—has a right to vote for those who will govern him. This is the heart of democracy because the governed himself somehow governs in choosing those who will guide his destiny as a citizen of his State or the Union. Once we have said this and say it out clearly in our Constitution, then I defy anybody to find legal ways around this simple qualification for the vote. I cannot imagine lawsuits going on for 2 or 3 years to determine whether someone is 21 years old or has lived in this State for the required period of time.

A DECLARATION OF AMERICAN FAITH

I believe that this is the long-range answer. But while we work on the short-range answer with all its intricacies, I hope we will work on the long-range answer, too. Because I think the time is ripe for this, and I think this would be one of the most startling and dramatic things that America could do in the total world situation today—when the total uncommitted colored one-third of the world today is pressed to choose between our democratic philosophy of life and that of the Soviets. The Soviets cannot say that they believe in the things that are total and essential and substantive in the philisophy of the West: the dignity of the human person, the spiritual nature that gives him the title to the certain unalienable God-given rights, the respect which each individual human being may expect, the equality of opportunity that must be his. I think making a fact of universal suffrage would be the most dramatic way to say these things that we believe. We would be saying to the uncommitted third of the world that we really are committed to the system that we would like them to follow.

There are a few other things I want to say. First of all I'd like to say something about Lincoln since we're so close to his birthday. Someone suggested that I say something about Lincoln since we're so close to his birthday. Someone suggested that I say something about the place of the heart in all this since it's Valentine's Day. I don't think that I've got time for both so I'll stay with Lincoln for the moment. Here is one of the most interesting stories I know about Lincoln. I cannot say that it's true or apocryphal, but I did read it in Thomas'

Life of Lincoln. This story tells of a time when the city of Washington was beleaguered by the Confederate Army and it looked as though the Union was at its lowest ebb in the Civil War. As Lincoln pondered on the pressures of the time and the seeming inevitability of military failure and what this would mean to the country of which he was President, it dawned upon him that the real issue at stake was an issue that he himself had not always recognized—a spiritual and a moral issue: whether indeed all men are created equal. We are told that on this occasion he made a promise to God that if Washington were spared, if the city were relieved and things took a turn for the better, he would at the earliest and most appropriate opportunity, promulgate the Emancipation Proclamation.

Notre Dame Civil Rights Conference—Part 11

EXTENSION OF REMARKS
OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. MACHROWICZ. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

Washington was spared, as you know, and the time soon became appropriate for him to make this proclamation. He called in his political advisers and his Cabinet to discuss this. He told them that he was talking to them about this but that he had already made up his mind about what he was going to write and that this was his sole personal responsibility. They gave freely of their advice. They said that such a proclamation would be the most politically inexpedient thing to do at this time. It would harden the opposition of the South. It was not politically viable. It was going to have a bad effect on the war. It would make for chaos and ruin in the Union. And yet Lincoln said, "I've made a promise—the other part of the bargain has been fulfilled and I'm going to do my part." So in the face of all this professional advice he made the Emancipation Proclamation. We only have to remember that today we remember him most proudly as the "Great Emancipator" to know who was right and that one does not make mistakes in these human problems when one follows one's conscience and pays attention to the moral and spiritual issues involved.

What we are discussing today should be as nonpartisan as any spiritual or moral issue facing America. We seek only one end—that all Americans are on equal footing in their participation in the civic order. We must use all of our brains and all of our compassion to find a solution, and that solution must not be tricky in a legal sense but be as simple as our belief that all men are created equal and that all men are entitled to vote in this country. We must take appropriate, firm, solid, simple means toward that end. I would think that a clear mandate to that end would shame people into seeing that nothing is done to violate this principle. So I think we should have courage like Lincoln's in promoting a constitutional amendment that would establish universal suffrage and say clearly to all the world that our basic principles are more important than legal trickery or political expediency.

THE THREE DIMENSIONS

I would like to say just one or two more things. I think there are three great dimensions to this whole problem of civil rights. The first dimension is a personal dimension. I don't know of any problem in this country that is more personal to each one of us than this problem of civil rights. I think one can legitimately abstract oneself from the problem of foreign policy—in the sense that we can all admit to a certain amount of ignorance about the intricacies of the negotiations at the summit, for example. I think we should be interested in foreign policy. I think we should concern ourselves about it. I think it's the place of intelligence to discuss it and create a great dialogue about it. But I can see how John Doe, of Mishawaka, Ind., could admit in the secret of his heart that he doesn't know very much about the great negotiations going on, the great issues that shape the foreign policies of our Nation. I think one also might plead certain ignorance of the great scientific developments that are taking place in the missile race or that are involved in the great discussions now in progress on defense. I'm not making a plea that this ignorance be continued, I'm merely saying that it is conceivable that John Doe, in Mishawaka, Ind., is somewhat ignorant about what makes a missile go and how good our missiles are compared with those of the opposition, and that many citizens do not now know and will not know the scientific intracicies that bear upon problems such as defense or nuclear power and the like.

A PERSONAL COMMITMENT

But I say that when it comes to civil rights if you so much as meet another human being in the course of your life, and all of us meet many, then you cannot be uncommitted on this problem. This is not the kind of problem about which a person can de detached. Because of the fact that you walk down a street, or live in a neighborhood, or work in an office, or get on a bus, or talk to anyone, you are involved in this problem and you must take a stand. This, I say, is the great pressing reality of this problem: it involves the personal commitment of every American citizen. Our national documents are inspiring and moral and right. I would hope that our individual consciences could be as inspiring and moral and right about what these documents imply—that every man has dignity, that every person as a sacred human being is entitled to our respect, and that each one of us in our own way, within our own sphere, no matter how small or how great it is, do our best to see that this equality of opportunity reigns and is not a figment or a hypocrisy.

I recall once standing on the 63d Street station waiting for the South Shore Railroad in Chicago. There was a young lady—a Negro nurse—standing next to me. And since we had about a 20-minute wait and I'm not much for standing alone and meditating on the tracks I decided to have a conversation with her. I asked her about her job and how she found work in Chicago and about her family situation. After the ice was broken she told me about having a little boy of whom she was very proud, a little son 4 years old. She said, "You know, Father, I was washing him the other day, helping him take a bath, and I told him, 'Now take this soap and scrub yourself real hard.' And he said, "Mommy, if I scrub myself hard enough will I be white?" And she said, "No, you're colored and you'll always be colored." And he said this simple thing: "It's better to be white."

My reaction to this story was: "Did you let him get away with that?" And she said, "Why shouldn't I let him get away with it? Isn't it better to be white in the United States of America?" I said, "Maybe on the surface it's better but this isn't the way a youngster should think with a whole life before him. Because what is today does not necessarily always have to be, and please God, it won't be the permanent pattern of our United States. It is certainly not the ideal of our Constitution. I think you should have told your little boy that color has nothing to do with how good a person is or what it is better to be as a person. Fundamentally what a person is, is what he is in the sight of God, what use he makes of what talent he has—how his values square with the good values and the great values of all times, how he feels towards other people and toward the responsibility of using his life in a constructive and helpful way, what his relationship is to his family and to his work and his God. All of these are the true measure of what a person is, and these are spiritual, not material measures."

But the story brought home one thing to me—that we're not ever going to solve the problem of civil rights in this country unless somehow we learn to judge people on their quality as persons and not according to the pigmentation of their skin. I think it is one of the nastiest things you can say about many Americans—maybe all of us in the depth of our hearts—that we put too much weight and emphasis on the color of our skin, almost instinctively, and that we don't think deeply enough about judging people on what they are as persons irrespective of how much money they might have or what color they might be or what nationality or what neighborhood or what religion they belong to. This is the great personal dimension of the problem, a problem in which we must all be engaged, all have a point of view, a deep conviction—and we must all act accordingly.

ORGANIC NATURE OF PROBLEM

The second dimension is simply what I would call the organic nature of the problem. I don't think we would solve this problem if this afternoon we came up with such a bright proposal that these gentlemen go back to Washington and next week enact a foolproof bill that enables every Negro in the country to vote in the next election. The problem would only begin to be solved by that but it would be still a long way from a total solution. Let me give you a simple formula in the nonlegal words of equal opportunity rather than equal protection of law. If we would honestly say that every American has equal opportunity across the board and then let the chips fall where they may, I think the whole problem would get solved pretty quickly. Every American would have an equal opportunity to live in the main stream of the political process, to hold office, to vote, to participate, to be educated to the extent that his energy and his ambition and his talent carry him.

Every American should have the opportunity to go as far as he could go as long as he had the talent, the intelligence, the ambition to keep working. Then every American should have the opportunity to work where he could do the most good for himself, for his family, for his community, for his country, without artificial bars to such work. He should do whatever he could do best and the only limitation to his success should be how much talent he had, how well he was educated, and how hard he was willing to work and how devoted he was to good things. And lastly every American should have equal opportunity to live in a decent house in a decent neighborhood, and that if he was successful and had made progress, no matter what his race or religion or anything else, he should be able to go up the social ladder and live where his heart desires and where his means permit. This choice would not be restricted as it is today by all of these cute little covenants and understandings and hypocricies that so characterize every city in the North.

Given these four equal opportunities and given the range of talents that are possessed by all races of human beings, I think the problem would find a solution. I'm not naive enough to think that this is going to happen by tomorrow morning. But I think this is the kind of solution that we as individuals can all subscribe to. Insofar as we control education or control jobs or control housing or have some say about any aspect of them, we can follow this viewpoint. If enough of us start doing this we will be well on the way to a solution.

RESPONSIBILITY OF GOVERNMENT

The third dimension of this problem is that it is not a responsibility of only one part of Government. It was said this morning that the judiciary has been unduly overloaded with the burden of this problem. Insofar as it must be solved on the governmental level, it is of course going to need the attention of all the powers of Government.

Let me give you a few examples to show what I mean when I ask for consistency in all the powers of government in this matter. We know that the Supreme Court has outlawed compulsory school segregation. Yet some universities and colleges, the institutions supposed to be the center of the training of leadership for the next generation, which are being given literally hundreds of millions of dollars of Federal support from the Congress and administered through executive agencies (some of which I belong to)—some of these institutions getting this Federal money simply do not follow the Constitution or the law of the land. I fail to see how the judiciary can clear up this problem if the other two branches of Government go quietly along helping those who openly defy the law of the land. I think this is particularly pertinent when we're talking about the segment of our society that is supposed to be turning out the leaders for tomorrow.

When I say this I'm not picking a fight with my fellow presidents and fellow faculty members of other colleges and universities, public and private. I think that most of them think rightly and would like to act rightly on this. Yet, private university and college administrators must face their boards of trustees and State school administration must face their legislators for funds. But supposing it were said that all Federal funds had this simple tag on them: that they must be spent for all the people, that they must be spent in a nondiscriminatory fashion, and that if anyone wants Federal funds for either private or public institutions, there is one condition—you have to agree that in using these funds you are going to follow the Constitution of the United States. What is so revolutionary about this? Yet the fact is that to date, while this proposal is contained in the report of our Commission on Civil Rights, there has been scarcely a word said about it.

In a sense I've been cowardly and have been relieved by the silence because one cannot take this stand without opening oneself to a certain amount of criticism from one's colleagues in the university and college world. Yet I think that this is a simple thing that could be accomplished tomorrow morning if those in power would decide to do something about it—and I'm speaking of both the legislative and the executive branches of Government when I say this.

The same is true of housing. I think it is no secret that less than 2 percent of federally assisted private housing goes to the benefit of the Negroes, despite the fact that this is public money, funnelled through private agencies, builders and real estate agents, brokers, and lending agencies. Yet here is a matter where the three powers of the Federal Government are working in dissonance—the judiciary saying nondiscrimination is the law and the others blithely going about paying little attention to the law and even rewarding those who refuse to follow the law. This is the third dimension.

If we are going to solve this problem, first, we must all be personally committed to its solution; secondly, we must remember that the problem has several dimensions, that it is an organic problem—that we must work on all these fronts at once; and lastly, insofar as we are concerned as we are here today with governmental action, let us ask that all the powers of Government work together in a nonpartisan way in this matter to try to reach some solution that will make real for all Americans, the promise of the Constitution.

Notre Dame Civil Rights Conference—Part 12

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. LINDSAY. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

PAPERS DISCUSSED AT CONFERENCE

(By associate Prof. Harris Wofford, Notre Dame Law School, legal adviser to Father Hesburgh, Commission on Civil Rights)

I. BACKGROUND MEMORANDUM ON RIGHT-TO-VOTE LEGISLATION

Fortunately the discrepancy between the promise of the Constitution and our failure to fulfill it in practice is not so great as that unbridgeable gap between the City of Man and the City of God. That greater divide is the source of our comedy and our tragedy and of the better part of our politics. Similarly, as the report of the Commission on Civil Rights suggests, the lesser divide—"the gap between the great American promise of equal opportunity and equal justice under law and its at times startlingly inadequate fulfillment in practice"—has been a creative factor in American history.

Right now there is no more startling discrepancy between our words and our deeds than the continued denial of the right to vote in violation of the 15th amendment. At last it seems, however, as if the tension caused by this in the American political conscience is creating a spark gap.

A SPARK GAP

Until now the problem has been to generate enough political current to bridge the gap. It may be that the sparks now flashing North and South, between Congress and the administration, between Democrats and Republicans, between the Civil Rights Commission and the Attorney General, will provide both the political energy and the illumination needed to get on with the job.

The Commission did its part primarily by building up the heat. The unanimous finding of the Commission that many Negro citizens are in fact being denied their right to vote, and the unanimous findings on the variety of methods of such denial—mainly through discriminatory administration of State registration laws—have built up the moral and political heat to the point where some substantial legislation appears likely

At first the administration indicated that it would stand—or sit—on its previous legislative recommendations—which did not scratch the surface of the problem.[1] But with even such conservative southerners as the three southern members whom the President had appointed to the Commission finding unanimously that "legislation presently on the books is inadequate to assure that all our qualified citizens shall enjoy the right to vote,"[2] and with newspapers like the Washington Post saying that the Commission's recommendations made the previous legislative proposals "look pallid by comparison," the administration was on a political hotseat in an election year, and so was the Democratic majority in Congress.

This calls for one qualification. The Commission noted that the power given to the Attorney General by the 1957 act to bring civil suits in Federal district courts, seeking equitable relief in cases where the right to vote is being denied by reason of race, has "not been thoroughly tested." Only four cases have been brought by the Attorney General—one in Terrell County, Ga., following an exposé of the situation there by the Washington Post; one in Macon County, Ala., following the hearing on the situation there by the Civil Rights Commission; one in Washington Parish, La., begun on the eve of a Commission hearing there; and one in Fayette County, Tenn., brought after the Commission reported on that situation.

Only in the Louisiana case, where some 1,300 already registered Negro voters were purged from the rolls at the instigation of the white citizens council, has any of these cases resulted in an order requiring the registration of any disfranchised person, and that order—made by an outstanding Federal district judge, Skelly Wright—is now on appeal. The proof of racial discrimination in such a case of a mass purge was overwhelming. The relief may also prove to be adequate, since the Negroes there had already once succeeded in getting registered and may well now stand up for their court-declared rights.

There may be other situations where this civil injunction suit of the 1957 act proves to be effective. As the Commission stated it is "disappointing" that the Attorney General has not tested this procedure more than four times in 2½ years. Commission Member Johnson suggests in a footnote to the Commission report that "reasonable grounds" to believe that citizens are being deprived of their right to vote—the language of the 1957 act authorizing such injunction suits—exist in all the 16 counties where Negroes constitute a majority of the voting age population but where no Negro is registered, and in 49 other counties with Negro majorities but

---

[1] The administration's 1959 civil rights program, the bill reported out of the House Judiciary Committee and the Commission all recommend that Congress require the preservation of local registration records and their public inspection. This would facilitate investigation and proof of discrimination. But the Commission concluded that "even if a law were adopted to guarantee such access and even if the Attorney General should bring civil suits for preventive relief in a larger number of districts * * * there is little reason to believe that such litigation would afford adequate relief." The Commission explained that so long as registration is left to local officials in these areas, administering literacy tests and other State qualifications for voting, "where there is will and opportunity to discriminate against certain potential voters, ways to discriminate will be found."

[2] "Against the prejudice of registrars and jurors," said the Commission's report, "the U.S. Government appears under present laws to be helpless to make good the guarantees of the U.S. Constitution."

fewer than 5 percent of voting-age Negroes registered. We would know better how to proceed if the Attorney General had brought suits in at least one of these 16 most extreme cases—or one suit in the State of Mississippi where the problem appears to be most severe. In Mississippi the Commission reported that there were 14 counties containing about 52,000 voting age Negroes in 1950 where, at last count, no Negro was registered; in the State at large containing nearly a million Negroes, or 45 percent of the population, only about 4 percent of 1950 voting age Negroes were at last report registered.

The Attorney General did his part by moving from a position of opposition to Federal registration machinery to agreement that some such machinery was urgently necessary, and by proposing the court-appointed-referee plan.

INCLUSION OF STATE ELECTIONS

He also contributed by raising everyone's sights. The Commission's plan for Federal registrars in cases of voting discrimination had been limited to Federal elections. This was done as a matter of policy and prudence, Commissioner Johnson explained to the Senate Rules Committee on February 5.[3] This limitation, made in an abundance of caution—a caution to be expected from some of the conservative men and southerners appointed to the Commission by the President—was undoubtedly a shortcoming.

It was probably not so great a shortcoming as the Attorney General indicated, for the very fusion of the State and Federal election process which he stresses should in many situations result in the abandonment of discrimination in State elections if discrimination in Federal elections is effectively ended. The assumption of the anti-poll-tax amendment to the Constitution just passed by the Senate, which was limited to Federal elections, was apparently this same assumption that if the practice was eliminated for Federal elections the States would drop it in all elections, rather than go to the trouble of establishing separate balloting.

Moreover, if States did continue to discriminate in State elections while honoring Federal registration certificates for Federal elections, the Attorney General would be able to proceed against such discrimination by the very civil injunction suits under the 1957 act—which do apply to State as well as Federal elections—which he makes the foundation for his referee plan. As Commissioner Johnson pointed out to the rules committee, the effectiveness of such civil injunction suits "would be greatly augmented in a case where a person had been registered for a Federal election, but was refused registration, for a State election." At least the difficult problem of proving discrimination in such cases should be facilitated by the finding of the voter's qualification by the Federal registrar.

Nevertheless, the Attorney General has raised the level of the discussion and of the legislative drafting by insisting that the registration machinery cover discrimination in State as well as Federal elections. Contrary to the impression he left by his Rules Committee testimony, however, this has no relevance to the question of the kind of registration machinery to be established by Congress. Whether the registration in cases of discrimination is to be by court-appointed referee or by presidentially appointed registrars or by some other agency, Congress can either include all elections, or limit it to Federal elections.[4] The Commission's Federal registrar plan is based on the 15th amendment just as clearly and firmly as is the Attorney General's referee plan.[5] The 15th amendment in no way suggests that its enforcement should only be through court litigation. In fact, the amendment specifies that "Congress shall have power to enforce this article by appropriate legislation." Either the Attorney General's plan or the Commission's plan meet this constitutional test, applied either to Federal elections alone or to State and Federal elections.

Let us agree that State elections should also be covered.[6] The question then is which method is the most appropriate—Federal registration through court litigation and appointment of a referee, or through administrative finding and Presidential appointment of a registrar or by some combination or new alternative.

METHODS OF ENFORCEMENT

The Attorney General made another contribution to this debate that should be acknowledged. His plan spells out the method of equitable enforcement of the Federal registration order. It is not true, however, that the Commission's plan relied solely on criminal sanctions. Senator JAVITS' bill, S. 2783, does establish criminal penalties for State election officials who refuse to honor Federal registration certificates. But Dean Storey, on behalf of the Commission, suggested to the Rules Committee that equitable enforcement could be provided in any bill, and S. 2814, and H.R. 10140 (Lindsay bill), the latest registrar bills, do specifically provide that enforcement should be by appropriate civil and equitable proceedings instituted in the Federal district courts by the Attorney General.[7]

Probably the most effective enforcement of a Federal registrar's certificate of registration would be through a court order and through prosecution for contempt if, after notice of such an order, it is disobeyed. The Attorney General's more detailed provisions in this respect are welcome—though perhaps still insufficient, in that an essential provision should be that the Federal district court has exclusive jurisdiction over any challenge to a federally registered citizen's right to vote. But these provisions for enforcement could be and should be included by Congress in any plan adopted—whether referee or registrar or something new.

[3] Commissioner Johnson stated that the Commission's "findings as to the existence of discrimination in the registration of voters applied equally to State and Federal elections. Moreover, we were and are fully aware that the commands of the 15th amendment, prohibiting denials of the right to vote on account of race, extend as fully to State elections as to Federal ones. Our decision to recommend legislation covering only half of the process, as it were, stemmed from no doubt as to the constitutionality of more ambitious legislation, but rather from practical considerations suggesting a more limited exercise of Congress undoubted power."

[4] If Congress does limit it to Federal elections, some provision will be necessary requiring local officials to provide the same ballot to federally registered voters as to others, in all elections in which Federal officials are being elected. The State could do this either by accepting such Federal registration as sufficient for balloting for State officers, too, or by providing separate Federal ballots which all voters would have to use in voting for Federal officers.

[5] If the Commission's inclusion (following the language of the 1957 act) of discrimination by reason of religion and national origin as well as of color and race is adopted by Congress, the plan also must rest on the equal protection clause of the 14th amendment. Here, however, the Attorney General's limitation to denials of the right to vote by reason of color and race is sound and in accord with the findings of the Civil Rights Commission.

[6] The Black-Emerson-Pollak (Yale) memorandum of Feb. 2, 1960, argues that the limitation to Federal elections should be retained at this time, largely on the ground that Federal registration machinery might encounter more opposition were the system extended to State elections. The memorandum states, however, that "There would appear to be no basic constitutional objection to the application of the system of Federal registration to State elections."

[7] The Black-Emerson-Pollak (Yale) memorandum of Feb. 2, 1960, makes a strong case for the retention of criminal sanctions. Senator ERVIN, of North Carolina, told the Rules Committee that a few good prosecutions of those denying the right to vote to qualified citizens would do more to clean up the situation than anything else.

Notre Dame Civil Rights Conference—Part 13

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. UDALL. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at Notre Dame on February 14, 1960:

THE CHIEF OBJECTIVE

If the distinctions between the two plans based on the extent of coverage and the methods of enforcement are not necessary, what then are the essential choices?

First, what is the end sought which both the Commission and the Attorney General say they have in common?

The objective is, as Commissioner Johnson stated to the rules committee on February 5, that "the method of registering persons denied their constitutional right to right to register to vote be no more complicated or cumbersome than the method available to other citizens in the State or district who are registered."

He added:

"It is not equal protection of the laws to require that a Negro being denied his right to vote must spend hours or days or weeks in litigation in order to register. How many white citizens would take the pains to register if it took such an investment of their time—putting aside the additional consideration a Negro in some areas of discrimination would have to give to possible intimidation and economic pressures invited by such protracted litigation?[1]

[1] In seeking a way to make good the guarantee of the 15th amendment we need to keep in mind the relatively small area—generally the Black Belt rural counties of the Deep South—where the right to vote is being denied, and the conditions prevailing in these counties. In most large southern cities Negroes can register and vote, and in counties where the proportion of Negroes is small there does not appear to be much trouble. But what will suffice to enable qualified Negroes to vote in a county such as Bullock County, Ala., where only 5 Negroes out of more than 5,000 of voting age, are registered compared to 2,400 registered whites out of a 1950 white voting age population of some 2,600, and where the predominant white people are so determined to prevent larger Negro registration that for about 18 months in 1954–56, following a court order to register qualified Negroes, no board of registrars functioned at all, and again none functioned from about July 1957 to the time of the Commission's hearing. Or what will enable Negroes to vote in the 16 Negro-majority counties

Attorney General Rogers also testified that the process of registering qualified Negro voters who had been denied their right to vote should be as routine as the registration process for white voters.

The problem is how to bring this about.

THE COMMISSION'S REGISTRAR PLAN

It could be done under the Commission's registrar plan. The presidentially appointed temporary Federal registrar could ministerially register all citizens he found qualified under State law. The Commission has demonstrated, even with its present 3-to-3 regional split, that it can proceed with good speed and unanimity to investigate and hold hearings on complaints and make findings of fact—findings that under this plan would lead to the appointment of a Federal registrar.[2]

The finding by the Commission of the denial of the right to vote in a particular election district and the finding by the Federal registrar that particular citizens were qualified to vote, would not be reviewable or subject to effective legal attack by the State or local registration officials, it would be hoped, until the Attorney General went into court for judicial equitable enforcement, or until a federally registered voter was challenged at the polls. At that point the Federal court would review the record of the Commission and of the registrar and hear appropriate State officials, and, as in a review of the orders of other administrative agencies, uphold the Federal registration if there was substantial evidence to support it in the record viewed as a whole, or unless clearly erroneous, according to the test prescribed by Congress. But however protracted some of the litigation at this point, the Negro citizens would have been registered in a routine fashion, without having first had to run the gantlet of a judicial adversary proceeding.

There are of course pitfalls. The Federal registrar appointed from among local Federal employees, such as the U.S. postmaster, might be as prone to discriminate as the State registrars. But supervision could be provided by the Department of Justice and if he failed to perform his duty fairly, he could be replaced.

THE ATTORNEY GENERAL'S REFEREE PLAN

How far does the Attorney General's plan meet the need for some routine, ministerial method of Federal registration?

If past experience is an accurate guide, the initial court trial to find the pattern or practice of discrimination required by the Attorney General's plan would undoubtedly be more protracted than proceedings by the Civil Rights Commission. Some of the Federal district judges in the very black belt areas of the Deep South which are most involved are southerners who share many of the attitudes of the local officials for whom a substitute is required.

To the already difficult problem of proving denial of the right to vote by reason of race in individual cases, the Attorney General's plan requires the additional finding of a "pattern or practice" of such denial.[3] Moreover, even after such a finding, the Attorney General's plan provides only that the court "may" appoint a voting referee. There is the possibility that certain judges may not choose to exercise the power at all.

Then, even if the southern district judge makes the necessary findings and decides in his discretion to appoint a referee, he has very wide discretion in choosing whom to appoint. Some attorneys who have practiced before some of the southern district judges in question say there is reason to fear that some of the local referees appointed by these judges would be as prejudiced as the local registration officials. If this should happen and a referee should discriminate against Negro applicants through unduly strict or technical application of State qualification laws, the Negro applicants and the Attorney General would be in a real box. For such a referee's findings would then have to be accepted by the court unless clearly erroneous.

These possibilities of inaction, delay or worse raise serious questions about the appropriateness of entrusting the task of Federal registration primarily to southern Federal judges and their appointed referees.

FUNCTION OF THE REFEREE

Even more important perhaps is the question of how the referee would function once appointed, assuming his good-faith readiness to carry out the purposes of the act.

If the State officials who are parties to the original suit are permitted to participate in proceedings before the referee in respect to each Negro applicant, then the objective of a routine registration procedure will not be attained. If Negro applicants are to be put on oath and subjected to cross-examination by attorneys for the State or for the local registrars, few are likely to take advantage of the new procedure. The would-be Negro voter who is prepared to engage in litigation in order to vote already has available remedies.

Indeed there is real question what such a Negro litigant would gain by the Attorney General's procedure if, in final form, it involves a full trial before the court of the question of pattern or practice or discrimination, then a full adversary hearing before the referee, and then court review of the referee's report and possible appallate review. This would be substituting a three-stage litigation procedure, with appellate review, for the existing one-stage trial and review.[4]

The Attorney General told the rules committee that Negro applicants under his plan would not have to go through a formal judicial proceeding before the referee and that there would be no requirement that State officials be invited to watch the referee proceedings. However, the Attorney General also said that "the administration proposal, without attempting to spell out any rigid procedures, gives the court full discretion to have the referee proceed in the manner best calculated to make its mandate effective.

If the referee's procedures are not spelled out in detail and made ex parte proceedings, it is probable that most southern district judges in their discretion would provide formal adversary proceedings in which the State's attorneys would be able to participate. The Attorney General's bill as presently drafted gives no mandate to do otherwise. On the contrary it specifies that the referees would "have all the powers conferred upon a master by rule 53(c) of the Federal Rules of Civil Procedure." While the act could make an exception and require the referee to proceed ministerially and ex parte, rule 53 clearly contemplates the participation before the referee of all the parties to the suit.

If the Attorney General's plan is to accomplish its purpose it must, therefore, be amended to require such an exceptional ex parte proceeding before the referee. This could probably be done, as part of the equitable relief in a case where there has been an initial judicial finding after a full hearing in which all appropriate parties participated. Trustees running a railroad can administer management matters in a routine and ex parte fashion. But there is a question about the propriety of extending such ex parte relief to the degree required in any effective version of the Attorney General's plan.

PROPRIETY OF JUDICIAL REGISTRATION

Beyond this there is the larger question of the propiety of imposing upon the Federal courts any such extensive administrative burden. De Toqueville says that in America every political question ultimately takes a judicial form. Perhaps we should relax and enjoy our fate in this respect. If courts can run transcontinental railroads (and soon perhaps an international union) they can run a registration bureau. There is a special magic and majesty in the rule of law established by a court of law. Perhaps a court order requiring registration will penetrate more deeply into the white southern mind than the acts of any other governmental agent, including the President of the United States—however ironical this is in view of the white southern attack on the Supreme Court's judicial legislation. And there are advantages in having the court in the situation from the beginning when ultimately there may have to be court enforcement before any Federal registration is effective. Probably a district court would be more inclined to enforce and more energetic in its enforcement of its own findings and orders and powers than it would be in the case of an outside administrative agency coming in for judicial assistance.

However, the burden of the Federal judiciary in school desegregation is very heavy. The result of leaving that problem to court litigation has been slow progress through long drawn-out cases, with few Negro parents prepared to undergo the ordeal by litigation.

If ever there was a problem political in its nature calling for a political solution, it is the denial of the right to vote under the 15th amendment. This goes to the heart of the Nation's political process itself. A congressionally enacted administrative procedure by which qualified citizens are registered in districts practicing discrimination thus seems to be the most appropriate remedy.

---

where not a single Negro is registered—particularly in counties where no Negro has even dared to try to register?

[2] The Commission suggested that it could serve as the agency to make such findings under the registrar plan. However, as Commissioner Johnson made clear to the Rules Committee, the Commission proposed this only because it knew of no other existing agency better designed to do it. Congress could establish a new agency, or could, as Senator HUMPHREY suggested in his testimony before the Rules Committee, provide that the Commission would make these initial findings so long as it existed and thereafter the findings would be made by such other agency as Congress should designate. The Commission's proposal that the plan be triggered by 9 complaints is also clearly a nonessential, since any 1 of these 9 initial complaints found to be true should be sufficient—as in S. 2814—to call for the appointment of a Federal registrar.

[3] Considerable court reistance to a finding of such a pattern over and above a finding of discrimination in individual instances can be expected. The Commission noted in its report: "Class suits on behalf of a number of Negroes to obtain registration have rarely been successful. The courts have inclined to the view that these suits are of an individual nature, with the result that a vast number of suits may be necessary."

[4] The referee provision would presumably be effective in situations where Negroes are prepared to litigate to enforce their right to vote but where the local registration machinery is not functioning at all. For instance in Macon County, Ala., where a considerable number of Negroes are already registered and where a large number are actively seeking registration but where local registrars have resigned rather than face a court order to register them, the referee plan might suffice.

The U.S. Government has three engines to propel it. So far in this matter it has been flying on one engine—the Federal judiciary. This problem cannot be adequately solved by the action of one branch of Government—and the platitudes of the President. It is time that the other two branches of the Government exercise their full responsibilities so that resort to the courts can be, as it should be, a last resort. The Attorney General's plan, if taken alone or in its present form, is another example of this administration's practice of trying to turn over its political problems to the courts.[5]

[5] See the further arguments on the inappropriateness of relying solely on judicial remedies in the Black-Emerson-Pollak (Yale) memorandum.

Notre Dame Civil Rights Conference—Part 14

EXTENSION OF REMARKS
OF

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. O'HARA of Michigan. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

SOME OF THE ALTERNATIVES

The essential choice then, as Commissioner Johnson stated to the Rules Committee, is "one between the administrative process and the judicial process." But it is not a simple choice. There are various alternative methods under each category, and, the Attorney General to the contrary notwithstanding,[1] there are various possible combinations.

With the Democratic leadership in Congress still to be heard from, the legislative situation is still fluid; the Senate and the House have the opportunity and responsibility to devise and adopt the most appropriate remedy. Some of the alternatives to or possible combinations of either the Commission's or the Attorney General's plans are suggested below: [2]

1. Adoption of both plans. Senator KEATING has suggested that both the Attorney General's referee plan and the Commission's registrar plan should be adopted. If politically feasible this would probably be the best combination. The Attorney General's plan would contribute to the effectiveness of his existing power under the 1957 act to bring civil injunction suits. Such suits could remain a useful additional sanction even if the Commission's plan were in effect, and particularly if the Commission's plan should be limited just to Federal elections. Adopting both measures would be consistent with the approach taken in the 1957 act, where an administrative fact-finding agency, the Commission, was established, and the Attorney General was given new power to bring civil suits. Both these measures of the 1957 act now need to be strengthened.

Such dual relief through judicial and administrative avenues has precedent in the field of Government trade regulation. The enforcement of the antitrust laws provided by Congress is though suits by the Attorney General (and by individuals) in Federal district courts, and through administrative action by the Federal Trade Commission. Just as the orders of the FTC can ultimately be enforced in Federal court, so the registration by a temporary Federal registrar, pursuant to a finding by the Commission on Civil Rights, should be enforceable in Federal district court upon suit by the Attorney General.

Both approaches might thus ultimately lead to court enforcement through voting referees who superintend the balloting, but the possibility of administrative action in the initial finding and registration would increase the likelihood of substantial numbers of Negroes becoming registered.

2. A finding by the Commission and then court appointment of a referee. A more complete merger of the two plans, getting some of the benefits of both, would be to adopt the first part of the Commission's plan, the procedure for investigation, hearing, and finding of discrimination by the Commission upon the submission of complaints by citizens who allege they have been denied their right to vote, with the Attorney General's plan for enforcement through the courts. In this combination the Commission finding would not lead to the appointment of temporary Federal registrars, but would result in a petition to a Federal district court for the appointment of a voting referee. The act would need to provide that the Commission's finding would be accepted by the court if there was substantial evidence on the record viewed as a whole to support it (or unless clearly erroneous). The court, unless it so reversed the Commission, should be required by the act to appoint a voting referee to register qualified persons ministerially.

The Attorney General's phrase "pattern or practice" could be adopted as the necessary jurisdictional finding to be made by the Commission, if it is deemed useful. Also the initial administrative finding could be made by any other agency that Congress should designate if the commission is deemed inappropriate.

3. Administrative appointment of a Federal registrar to be followed, when necessary, by court enforcement, including a court appointed referee. Most of the advantages of both plans could be achieved by providing for an administrative appointment of Federal registrars by the executive branch, as proposed in the Black-Emerson-Pollak (Yale) memorandum of February 2, 1960, with later enforcement of the Federal registration and supervision of the balloting by a court-appointed referee. The Yale proposal provides for the appointment of a temporary Federal registrar whenever the President has reason to believe that citizens in any election district are being discriminatorily denied registration. An automatic criterion for such an appointment is suggested: a petition filed by at least fifty persons residing in any county or parish requesting the appointment of a Federal registrar.

This plans avoids the necessity of any formal hearing at all, by the Civil Rights Commission or any other agency. It suggests, however, that the factfinding machinery of the Civil Rights Commission might be used to assist the President in reaching his determination. But any litigation over the legitimacy of the Federal registration would have to wait until either the Attorney General went into court to seek judicial enforcement or until State officials challenged any federally registered person at the polls. The proposed "reason to believe" test is suggested by the provision in the existing section 131(c) of the 1957 act for civil injunction suits by the Attorney whenever "there are reasonable grounds to believe" that any person is about to be deprived of his right to vote.

4. An initial judicial finding followed by an administrative appointment of a Federal registrar. A combination that could provide for the judicial determination of a pattern or practice of discrimination which the Attorney General considers so important and yet make possible the ministerial registration of qualified voters by an administrative officer of the Federal Government would be a provision that upon a finding by a court of such a pattern or practice of discrimination in a civil injunction suit the President may appoint a Federal registrar. This would leave the Commission on Civil Rights out of the picture altogether and thus simplify the procedure in that respect. It would permit the Attorney General and the President to determine whether a court injunction and other equitable judicial relief would suffice in any particular case. If the President determined that a Federal registrar was necessary to provide adequate remedy in such a case, he would be empowered to make such an appointment. Any act establishing such a procedure should also provide for subsequent judicial enforcement, if necessary, of the right to vote of persons registered by the Federal registrar.

5. Amendment of the Attorney General's bill to provide for ministerial registration by the referee. If none of the above combinations or any other alternative to or combination of the plans is possible, then at least the Attorney General's bill should be amended to make certain that the voting referee will upon appointment proceed to register all citizens within the class discriminated against, for example all Negroes, whom he judges to be qualified under State law to vote, and that he will conduct this registration ministerially, in a routine fashion, approximately similar to the registration procedure used by local officials for other persons within the district, and that he will not conduct such registration as an adversary proceeding with opportunity to other parties than the persons being registered to be present or heard. The Attorney General's act should also be amended to provide that when a court finds that persons have been deprived on account of race or color of their right to register to vote pursuant to a pattern or practice of discrimination it shall—not may—appoint a voting referee. It might also be important to change the test from one of finding that persons have been deprived to a finding (using the language of the 1957 act) that there are reasonable grounds to believe that persons are being or are about to be deprived of their right to register to vote.

The amendments to the Attorney General's plan proposed in the last point should be considered in any of the above combinations where the Attorney General's plan in whole or in part is involved. It is assumed in all of these combinations that State as well as Federal elections are to be covered, although this is not essential, and at least the Federal registrar parts of these combinations might be limited merely to Federal elections. In all of the above alternatives court enforcement by civil and equitable and possibly criminal sanctions is contemplated.

In whatever plan that is adopted it would be wise to spell out in some detail the pow-

[1] To Senator KEATING's proposal for a marriage between the administrative registrar and the court referee plans, the Attorney General said that "it would be a shotgun wedding," and insisted that all those who believe in progress in civil rights should get behind the referee plan.

[2] Senator HART's earlier bill, S. 2535, providing for the establishment of a Congressional Elections Commission to prevent discriminatory denial of the right to vote in elections for Members of the House and Senate is a quite different approach. It excludes not only State elections but presidential elections. The possibilities of this approach have not been considered in this memorandum.

er of the court to appoint a person to attend at the balloting to report immediately to the ocurt any denial of the right to vote to persons federally registered. Perhaps the duties of the Department of Justice in this respect in districts where Federal registration machinery has been established should be spelled out, too, so that a federally registered person can be sure that there will be Federal officers present at the polling places in such districts to protect his right to vote through the quickest possible court action.

My own preference is for a plan that permits qualified citizens in the class being discriminated against in a particular district to get registered by an administrative agent of the President without any court proceeding at that stage. The proper time for litigation of the propriety of such Federal registration, it seems to me, is when a ballot of such person is challenged at the polls. Procedures already exist for the impounding of such ballots and judicial determination of their legitimacy. The forthcoming 1960 act should provide that the Federal district court in the area involved should have exclusive jurisdiction over all such challenges to federally registered voters.

While this approach would involve possible litigation at a later stage, at least the bottleneck to registration would have been broken and presumably substantial numbers of Negroes would be registered. The Department of Justice would in all such situations have to be ready and on hand to enforce the rights of such persons at the polls, and for this, in instances of continued State or local resistance, the Attorney General's additional sanctions should be helpful.

THE STATE'S RIGHT TO BE HEARD

It must be assumed that with whatever plan adopted there will be at least one test of the plan's constitutionality and that the Supreme Court will uphold the constitutionality of any of the above procedures.

In all of the plans involving an official finding of discrimination in a particular election district by the Commission on Civil Rights it is assumed (although none of the registrar bills yet so provide) that such a finding would be made pursuant to a hearing held by the Commission or a subcommittee of two or more of its members authorized by section 105 (f) of the 1957 act, and that such a hearing should be conducted under the rules of procedure established by Congress in section 102 of the act. If the Supreme Court in the present Louisiana case testing the Commission's rules of procedure requires any modification of those procedures, such modifications should of course be made. Probably in any of the plans requiring a Commission finding, the act should provide that the Commission shall give due notice and opportunity to be heard to the appropriate registration or election officials in the district involved in any proceeding.[1] Such officials would of course have due notice and opportunity to be heard in any court case under the Attorney General's plan.

In deference to the legitimate interest and perhaps the right of the State to see that only those persons qualified under State law vote in State elections, it is probably necessary that State officials also have at least one opportunity to contest the qualifications of a particular voter registered under Federal procedures.

Under the Attorney General's plan as initially proposed there would probably have been several such occasions for the State to be heard. If the plan is modified to make the referee function ministerially and ex parte, the State would still be able to participate in the initial trial on the question of pattern or practice and would then be given an opportunity to request a hearing and to present evidence to show that the referee's determination in a particular case is clearly erroneous.

However, there should be some provision that avoids prolonged delay in the effectiveness of a particular registration pending an appeal from the referee's or the court's finding. Perhaps the act should require that the court issue a decree forthwith ordering the registration of all persons found to be qualified by the referee, with a time set within which State officials could request a hearing and argument to show that a particular registration was clearly erroneous.

In any election coming while such supplementary proceedings, including appellate review, are pending, the federally registered person should be entitled to cast his ballot, although the ballot may be impounded pending the outcome of the case. It should probably also be provided that appellate review of the finding of pattern or practice should wait until some particular registration is contested, and that while any such review is pending the voting referee should continue to conduct Federal registration.

REGULATING OR PROHIBITING LITERACY TESTS

There is another measure that might contribute greatly to the solution of this whole problem, and especially facilitate the effectiveness of the Attorney General's referee plan: some regulation, if not prohibition, of State literacy tests. A great part of the discrimination by State officials occurs in the application of State literacy or other educational tests, and this would be a great part of a referee's or registrar's problem in conducting Federal registration pursuant to State qualification laws.

Three members of the Commission on Civil Rights proposed as the best and ultimate solution a constitutional amendment establishing universal suffrage and prohibiting literacy and any other State requirements except for age and length-of-residence requirements.[2] This would be a rule of law cut through much of the problem and either result in an end of State discrimination in registration tests or at least greatly reduce the need for intervention by Federal agents in the State legislation process. For the reasons given in the Commission's report, I support this course strongly and hope that, if not in this session, then in the next session Congress will see fit to submit such an amendment to the States for ratification.

A more limited approach is embodied in Senator HENNINGS' proposal in title XI of S. 1617 which provides that all intelligence, educational or other tests to which any individual may be subjected by registration officials in order to determine his qualifications to vote at any Federal election, shall appear in printed form and be administered so that the answers thereto shall appear in writing. This would probably be most helpful in reducing the room for discrimination.

[1] The present registrar bills do not specifically provide for such notice and opportunity to be heard though it has been the Commission's practice to hear State officials, although not to give them an opportunity to cross-examine Negro witnesses. The Black-Emerson-Pollak (Yale) proposal requires no hearing or finding by the Commission at all, or by any other administrative agency. Constitutionally, this is feasible, especially since the State would have an opportunity later to challenge any voter as unqualified and to litigate this question in Federal court, while impounding the ballot. One such day in court should be sufficient.

[2] The main section of the proposed constitutional amendment is as follows:

"SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State or by any person for any cause except inability to meet State age or length-of-residence requirements uniformly applied to all persons within the State, or legal confinement at the time of registration or election. This right to vote shall include the right to register or otherwise qualify to vote, and to have one's vote counted."

Notre Dame Civil Rights Conference—Part 15

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. ADAIR. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

A stronger version of the Hennings' plan would be an act of Congress providing that in any State with a literacy or educational test for voting, a certification of graduation from the 6th grade (or also from high school or college) should be conclusive evidence of such qualification, and that for any other persons any literacy or educational test should be in printed form and uniformly administered so that the answers thereto appear in writing.

Some such Federal regulation or prohibition of literacy tests appears to be required to make any Federal registration machinery fully effective. For without this there is the possibility that even the fair application of State qualification laws to Negro applicants would amount to discrimination, since many white applicants probably get registered by State officials without meeting the prescribed standards.

THE SYMBOLIC VALUE OF FEDERAL LEGISLATION

Whatever remedial machinery adopted by Congress this session—even the Attorney General's plan, with all of its present defects—the effect of such legislation should be constructive. The symbolic value of an act of Congress or constitutional amendment protecting the right to vote, and of actions by a Federal court, a Commission on Civil Rights, a voting referee or a Federal registrar, should be significant.

President Eisenhower is correct in saying that ultimately this problem must be solved in the minds and hearts of the American people. Primarily we are concerned with reaching the minds and hearts of both the disfranchised Negroes of the South, and the dominant white citizens and officials. In doing this—in encouraging Negroes to register and stand up for their right to vote, in discouraging white southerners from violating the Constitution—the law has a great role to play.

If by act of Congress this session the other two great engines of our Government, the legislative and executive branches, can begin to operate with some power in this problem, we can expect further progress. For as Justice Brandeis said, the Government of the United States "is the potent, the omnipresent teacher" that "teaches the whole people."

2. MEMORANDUM TO SENATOR JOHN F. KENNEDY FROM PROF. PAUL A. FREUND, HARVARD LAW SCHOOL

ANALYSIS OF PROPOSALS FOR PROTECTION OF VOTING RIGHTS

The two principal proposals will be designated as the commission and the justice plans.

The two plans are similar in objective but differ in details of administration and enforcement. The principal points of difference are these:

1. Appointment and functions of Federal voting officials. The commission plan provides for appointment of registrars by the President, to be drawn from existing local officials such as U.S. attorneys, clerks of court, etc. The justice plan provides for appointment of referees by Federal district courts. Moreover, there is a difference in their duties. The registrars would serve to consider the applications of citizens claiming discrimination in respect of registration and would determine whether such an applicant was in fact a qualified voter. The registrars would serve until a finding that discrimination had ceased in the locality. The referees appointed by the courts, under the justice plan, would not in fact make final decisions regarding qualifications of voters but would hold hearings and report to the court, which would consider the report and enter a decree. The decree would be brought to the notice of the State electoral officials, who would be bound thereby.

2. Scope of the bills. The commission plan is limited to Federal elections. The justice plan reaches both Federal and State elections. Presumably the commission plan is based on the constitutional power of Congress under article I, section 4, which relates to selections for Congress. There is no reason, however, why the commission plan could not be extended to State elections, by virtue of the authority in the 14th and 15th amendments, each of which provides for appropriate enforcement by Congress.

3. Sanctions. The commission proposal relies ultimately on criminal sanctions against State officials who might refuse to honor the registration of voters certified by the Federal registrars. The justice plan contemplates that the State election officials, including State registrars, would be notified of the court orders and would thereby become subject to contempt proceeedings in case of violation. These proceedings would be governed procedurally by the same provisions that are now contained in the 1957 Civil Rights Act. In addition, the justice plan porvides for the contingency of resignation of State registrars. In that event it is provided that the State itself assumes the obligation of the office and may be sued by the United States.

4. Timing. The Commission plan involves the presentation of private complaints to the Civil Right Commission and, in appropriate cases, the forwarding of a finding by the Commission to the President in order to set in motion the appointment of a temporary registrar in a given district. The Justice plan provides that the bringing of complaints shall be the responsibility of the Department of Justice under the existing Civil Rights Act. Thus under this plan the enforcement process will depend on the initiative of the Attorney General and will also be somewhat at the risk of delays in court calendars, and of appeals from the order of a district judge.

COMMENTS AND SUGGESTIONS

1. Constitutional validity. There is no real difference to be drawn between the two plans on the score of constitutionality. The Commission plan could be amended to reach State as well as Federal elections. The Attorney General appears to have had some slight doubt about the adequacy of the hearings which might be held by the Commission, in contrast with the judicial hearings provided for in his bill. But this issue appears not to be serious. The hearings to be held by the Commission are not for the purpose of removing State registrars from office, but only for the purpose of supplying a basis on which the President may act in appointing temporary registrars. The President could appoint such registrars without any hearing at all, if Congress so authorized pursuant to its power under article I, section 4 or the 14th and 15th amendments.

2. Effectiveness. The Commission plan seems to be freer from the delays and uncertainties inherent in the bringing of law suits by the Attorney General and the progress of such litigation in the district courts and, it must be assumed, on appeal. It should be remembered that this litigation would have to eventuate in orders of the courts before even the state of registration of voters could be reached. On the other hand, the Justice plan has the advantage of using the contempt procedure rather than the criminal law as an ultimate sanction. How important this factor may be will depend on how frequently the ultimate sanction will have to be employed. Under the Commission plan, the aggrieved citizen will be registered without any judicial process, and the State officials at the final election will be under a duty to respect the registration as in any other instance of registered voters. It is only if these officials refuse to honor the registration that sanctions would have to be employed. The Justice plan, in contrast, relies on State registrars to honor the orders of the district courts, and it is at this earlier stage that the contempt procedure would come into play if necessary.

The Justice plan provides that the courts "may" appoint referees. In addition to the problem of time, there is the possibility that certain judges may not choose to exercise the power at all.

A suggestion might be offered that the Commission plan be amended to provide, in addition to the criminal penalties, that the United States could bring suit in equity against State election officials to compel them to receive and count the votes of qualified voters, and that in the event of resignation of election officials or registrars a district judge would have authority to appoint an officer of the court to carry out the court's orders. This seems a more acceptable device than a suit against the State as a substituted defendant. There would be less affront to the State, and the practice of appointing a court official to carry out its orders has precedent in a long-established practice of courts of equity to appoint officers to execute deeds of property where the property owner fails or refuses to carry out an order of conveyance.

3. Federal-State relations. The Justice plan, it is argued by its supporters, minimizes the displacement of normal relations because State officials continue to carry out all their duties. But this position is a rather formalistic one, since they are subject to the control of the Federal courts in the event of failure to follow the court orders. Moreover, as has already been noted, it becomes necessary under the Justice plan to provide for contempt proceedings against State registrars and for substitution of the State itself if the registrars resign.

4. Responsibility within the National Government. It is this feature of the proposals which seems to me the most significant. The Commission plan brings the President into the process of safeguarding the right to vote. The Justice plan seems designed to shield the President from any such participation. As a corollary, the Justice plan imposes on the Federal courts still further responsibilities. There is reason to believe that the Federal judges have been shouldering more than their fair share of responsibility in this general area and that in all fairness the executive branch should lend its weight to the discharge of this national responsibility.

Notre Dame Civil Rights Conference—Part 16

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. METCALF. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

3. MEMORANDUMS FROM PROF. G. W. FOSTER, UNIVERSITY OF WISCONSIN LAW SCHOOL

Memo to: William Welsh, administrative assistant to Senator HART.

From: Bill Foster.

Subject: The Rogers proposal for voting referees.

This replies to your request for my reactions to the proposal of Attorney General Rogers that voting referees be judicially appointed in proceedings brought by the United States under 42 U.S.C. 1971.

I shall attempt to summarize in this memorandum my reasons for these conclusions:

I. As an approach, the judicial referee strikes me as the most sound and flexible one that I have seen.

II. The Rogers bill should be amended to:

(a) Permit proceedings against local election boards as legal entities, regardless whether the local officials have resigned or not; the Rogers bill deals only with the case where the local officials resign before suit, and solves the problem by converting such a case into a suit against the State, thus buying a host of conceptual and political problems which probably can be avoided.

(b) Clarify the manner in which process may be served in proceedings under 1971 and specify more accurately the class action characteristics of a 1971 proceeding once there has been a finding that in the election district made party defendant there has been a pattern or practice which has deprived persons of rights secured under 1971 (a) and (b). My recommendations here include (1) the jurisdiction of the court with respect to a particular election district shall continue in the action until the court finds "there is no longer reason to believe that the kind of conduct, pattern or practice complained of is likely to recur"; (2) the right of others to join as parties plaintiff when they apply to the voting referee, with costs and filing fees to be absorbed by the United States, and that this right of subsequent joinder shall be available as long as the district court continues jurisdiction over the election district.

(c) Clarify whether all questions raised in proceedings under 1971 are triable before a single district judge, or whether some issues are triable only before a three-judge district court. My recommendation here is to make the three-judge district court proceedings inapplicable here for the result would otherwise be to chop off the proceedings unmercifully.

(d) Decide what effect shall be given an appeal from a decree which either certifies a Negro to vote, or denies certification to him. The Rogers bill is silent on this, but it seems to me that at least where the district court has granted a certificate, the person should thereafter have a right to vote, and if necessary hold his vote in escrow until any appeal from the certification has been determined. This may, however, delay greatly the final determination of election results in some cases.

(e) Make sure that the specification of a voting referee for cases under 1971 shall not give rise to any influence that district courts refuse to use similar equitable devices in the enforcement of other Federal rights. Keep in mind the thought that school boards in the South are going to resign now and then if they think this can defeat desegregation, and it may be helpful for a court to appoint a referee or a master who can fashion a recommendation for assignment of pupils to the school system.

More detailed comment on these points follows.

I. THE CASE FOR AND AGAINST JUDICIAL REFEREES IN VOTING SITUATIONS

Probably the most important reason I have for supporting the system of judicially appointed voting referees is this: The Federal courts in the South are going to be involved directly and in detail in any system designed to give Negroes the right to vote. If a specialized Federal executive agency is set up (or, as Senator HART has suggested, an agency responsible to Congress), the South in either case is going to demand judicial review of its factfinding and of its legal powers.

So it seems to me that everyone is going to be better off if we simply start off in court in the first place. But I have plenty of caveats in saying this. We have dumped a social revolution into the hands of a small—and so far as I have observed, unusually able and faithful—group of Federal judges in the South. For each of these judges in the community in which he sits there is obviously reached some point beyond which he cannot go in pressing the social revolution without destroying his whole utility to the community and the Nation as a judge. If some other way existed for bypassing the judiciary in fulfilling our obligations to the Negro, the temptation to jump for it would be great. But so far as I can see, the courts are going to be involved, either on behalf of the Negroes for enforcement of their rights, or on behalf of the resistant white South bent on injecting every delay it can think of.

Another caveat I have is one which seems often to be overlooked. It is this: There is urgent need for carefully spelled out procedures to be followed in handling civil rights cases in our courts. Endless attention has been paid to spelling out substantive rights, either through constitutional interpretation or in the form of legislative proposals. But the Federal Rules of Civil Procedure, the other provisions of the Judicial Code, and the enormous reservoir of ill-defined equitable remedies have never been seriously thought about in terms of their advantages and limitations in managing litigation that is aimed at producing results with which dominant segments of the community vigorously disagree.

The failure to work out the procedural aspects of civil rights litigation has provided the resistant white South with sources for almost endless delay, while challenge is made to every procedural step in an action. My primary concern with all the bills you sent me is that they, too, overlook the same problems for the most part. If my specific recommendations here harp on procedural problems, it is because I have seen too much of wasted human energy that has gone into fighting procedural ambiguities which some thoughtful legislation could relatively simply patch up.

A final reason for preferring the judicially appointed referee is that I have more faith in the judiciary, sitting out a lifetime appointment, than I do in any bureaucracy, legislative or executive, where such an emotionally and politically complicated matter as this is involved.

So much for my reasons for supporting the Rogers approach.

II. SUGGESTED AMENDMENTS TO THE ROGERS BILL

(a) Permit suit against election boards as legal entities.

This proposal seeks to deal with the problem of identifying the parties made defendant in proceedings brought by the United States under 1971. In the easiest and simplest situation, it is of little concern whether a local election board is sued as a legal entity or not. The various members of the board are named as parties and by proper service of a summons and complaint upon each of them, they are made parties bound by any matters which the court subsequently determines.

But if we assume there may be a need to have court supervision over the election board of Macon County, Ala., for perhaps the next 5 or 10 years, it is pretty likely that the personnel of the board may change. And with this come all sorts of questions about substituting them for earlier members and about the extent to which they are bound with respect to matters previously determined.

Attorney General Rogers has made a proposal which handles one aspect, but not much more, of the kinds of questions just suggested. Apparently he has in mind the situation involved in *U.S.* v. *State of Alabama* (4 Race Rel. L. Rep. 624, F. 2d. (C.A. 5, 1959)), cer. granted. In that case the members of the Board of Registrars of Macon County, Ala., had resigned their jobs prior to the commencement of court action by the United States under 1971. The district court (see 171 F. Supp. 720) dismissed the action and the result was confirmed by the court of appeals. Three points in the holdings are of particular significance: (1) The resigned officials, having vacated their jobs "in good faith" before commencement of the action, were not suable under the Federal act because they were not obligated by State law to complete their service or to stay on the job until successors had been named. (2) The board of registrars was not suable as a legal entity since it was not a "person" within the meaning of 42 United States Code 1971. And (3) the action could not be regarded as a suit against the State of Alabama since the State was not a "person" within the statute, either. The constitutional question whether the State was suable under the circumstances was thereby avoided.

Holdings numbered (2) and (3) just mentioned suggest two possible ways of bringing suit under 1971. The first is to recognize the election board for a particular area as a suable entity, at least for purposes of 1971. The other, and the one recommended in the Rogers bill, is to convert the suit against the election board into an action against the State itself whenever there have been resignations or other vacancies that have stripped the board of its entire membership.

I assume the Rogers suggestion would be upheld as constitutional, though his way strikes me as the hard way to handle the problem. It is clear that the 11th amendment does not in direct terms deal at all with limiting Federal jurisdiction where the action is between the United States and a State. And under article III, 2, paragraph 2, the Constitution places such a case within the original jurisdiction of the Supreme Court. How happy Congress may be about extending jurisdiction concurrently to a district court for this kind of purpose is a good question. You probably recall that most suits brought by, or on behalf of, private persons or corporations to challenge the exercise of State power make no attempt to sue the State directly; the approach, rather, is to sue either State officers or State agencies to prevent them from using State position in some unwarranted way.

So rather than take on the headaches of arguing that an action under 1971 becomes a suit against a State, I would prefer what seems to me the much simpler solution of personifying the election board—i.e., of making the State agency or office itself a suable entity. This kind of fictionalizing by a legislature is well established: for numerous purposes all sorts of partnerships and other kinds of unincorporated associations have been treated as legal entities for purposes of suing and being sued. Federal Rule of Civil Procedure provides that a partnership or "other unincorporated association" has capacity to sue or be sued in its common name "for the purpose of enforcing for or against it a substantive right existing under the Constitution or laws of the United States * * *" and this is regardless whether they are similarly suable under State law in their common name.

The advantages of making an entity out of the board are numerous. Here are some obvious ones: (1) If, as I believe should be the case, the district court should exercise continuing jurisdiction over an election board until it no longer seems likely that local misbehavior will result, the decrees against the board can be binding against any later board members who have notice of them. (2) The difficult matter of substituting new board members, required where the board is not treated as a legal entity from the beginning, will no longer have jurisdictional effect—viz, the action will not be dismissed for lack of jurisdiction by failure to make a timely substitution of new members since jurisdiction will continue over the State office from the beginning, and the only problem with respect to new board members is that they must have notice of prior decrees in order to be bound by them.

I have a hurried draft which purports to deal with my recommendations II (a), (b), and (c). You will find the draft attached at the end of this memo.

Notre Dame Civil Rights Conference—Part 17

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. KASTENMEIER. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the procedeings of the civil rights conference at the University of Notre Dame on February 14, 1960:

(b) Spell out service of process and the continuing jurisdiction characteristics of proceedings under 1971.

(1) Service of process. So long as an election board is not treated as an entity, the proceeding under 1971 is simply one against separate individuals. As to personal jurisdiction over them, the provisions of rule 4(d)(3) and 4(d)(7) are doubtless sufficient for most purposes. Federal rule 4(d)(6) furnishes the basis for service of process where the suit is against the State. But, as the case of *U.S.* v. *State of Alabama* suggests, the situation gets difficult when the board members all resign prior to commencement of the action and there is no basis for treating the vacant board as a suable entity. If my suggestion for making the board a suable entity is adopted (and I suggest that it be adopted for all proceeding under 1971, not merely for those in which the board has resigned), some further

details about service of process are essential since the provisions of rule 4(d)(3) and 4(d)(7) will not handily cover the situation where the board is vacant. My suggestion for such a case is to provide for service upon the chief executive officer (i.e., Governor) of the State where service upon board members or at their board offices cannot with due diligence be made, either because they have resigned or because they go into hiding. Language to this effect is in the attached draft.

(2) Continuing jurisdiction over board. Attorney General Rogers suggests appointment of a referee only after a finding that deprivation of voting rights has resulted from a continuing pattern or practice. It would seem to me that the court should in such a case retain jurisdiction over the election board to supervise and watch over the election district until reasonably satisfied that the practice is gone. To this end it is implied in the Rogers language that until the practice is ended the court may expect a flow of applications over the course of time and the probability of supplementary decrees of certification. Perhaps it can be argued that later applicants need not be joined as parties plaintiff in the continuing case. I would think it better, though, to permit a liberal joinder of plaintiffs as they come in to assert their rights as members of the class protected by a 1971 proceeding. On the other hand, I see no reason to impose either filing fees or other costs upon them, and it seems to me reasonable that the United States should absorb such costs. The applicants may have to pay over, however, any poll tax or other fee chargeable under State law for the privilege of registering the voting.

The attached draft covers these point.

(c) Trial of 1971 proceedings before a single district judge.

It seems clear to me that proceedings under 1971 should be triable entirely under a single district judge, and that the provisions for trial of cases involving substantial questions of Federal right before three-judge district courts should not operate here. My attached draft covers this point also.

(d) What effect shall an appeal have on a certification by a district court?

For all that appears in the Rogers draft, an applicant can go right down and vote the moment the district court enters a decree certifying his right to do so. But the decree is, of course, a final order and it can be expected that local election officials will appeal every certification decree if thereby it is possible to delay Negro participation in local voting. Similarly, Negroes will want to appeal from decrees which have denied them certification. In both instances it would seem that a good case could be made for permitting the Negro to vote immediately after a district court decree, provided his vote was held in escrow pending the outcome of the appeal.

The effect of holding the Negro vote in escrow would be to hold up the decision in any race in which the number of escrow votes exceeded the difference in the votes of the two top candidates. If the usual leisurely appellate time schedule applied to these cases some serious political embarassments might result from the delay. But appeals can be accelerated.

If the alternative position is taken that the right to vote cannot be exercised until established on appeal, this will simply invite every conceivable delay which local election officials can imagine. And, furthermore, if the election results must be held up until escrow votes can be counted, this will put some fraction of whites behind a move to accelerate any appeals.

Perhaps it makes sense to distinguish the cases in which the district court certifies a Negro to vote and those in which the decree denies certification. My own view is that both groups should be permitted to vote in escrow pending the outcome of cross appeals. To do otherwise, and only allow those to vote who won district court certification, would put huge pressure on the voting referees and the district judges to deny certification in the first instance.

This voting in escrow involves plenty of problems. You can't simply use two ballot boxes, one for those already registered and another for those whose votes will be held in escrow: on termination of the appeals there may be some reversals of the district court decree. As a result, each escrow ballot would have to be placed in an envelope marked on the outside with the voter's name, then held by the referee pending determination of the appeals. He could then throw out the envelopes of those not ultimately certified and deliver the remainder to the local election officials for counting.

Objection may be made to the extent to which such a practice invades the secrecy of the individual ballot. But this is a right personal to the voter. If he chooses not to vote at all until his appeal is final, he is free to do so. If he wishes to vote before that time, and to face with it the possible revelation to some of the manner in which he voted, he is free to do this, too. This last choice is no more of an invasion into his secrecy than is likely to result from the use of an absentee ballot in many states. Though the racial issue may not furnish pressures for retaliation elsewhere that they do here.

I have not attempted a draft of a provision to deal with this. But the matter should certainly be given consideration.

(e) Specify that nothing in 1971 furnishes a basis for implying that similar inherent equitable powers should not be employed by Federal courts in enforcing Federal rights.

With perhaps the exception of serving a summons upon an election board where all its members have previously resigned, I believe that Federal courts can achieve, under existing authority, everything which is spelled out in the Rogers proposal and in my further suggestions. But achieving such results calls for some quite complicated pasting together of ideas scattered through the Federal rules, the judicial code, and countless equity decisions. And the job is further complicated by the fact that it would take quite a bit of persuasion to convince a district judge to employ them in such a manner. An imaginative judge, really bent on moving a good bit faster than most of them feel is appropriate for these stormy cases, could do wonders under present law, certainly in the voting area. But the decisions from the past are conservative decisions for the most part. And as trial judges they hesitate to project far beyond the tone or spirit of the older cases, preferring to leave innovation to the appellate judges or, better still, to you in Congress.

Frankly, I am really disappointed that Attorney General Rogers has not fulfilled the promises of those who predicted that he would breathe some real life into his civil rights division. Perhaps he has reasons that I would agree are good reasons if I knew what they were. But the public record of performance of the civil rights division reflects little that is vigorous or imaginative. A livelier Attorney General would have had dozens of these voting cases going, asking in each of them for different kinds of equitable remedies in search of effective solutions to this complex problem. The voting referee idea is a good one. He should have asked courts to set them up long ago. And he should have pressed courts for all sorts of expanded rulings on the scope of class actions in these cases. And so on and so on. But he hasn't.

In any event, so far as school desegregation cases and other classes of civil rights actions than voting are concerned, only the meager resources of private persons are so far available to press for civil rights. And nothing that is done here should support any inference that district courts should not feel free to use referees or masters or any other kind of equitable device if reasonable grounds for doing so are presented to the court. Certainly Chief Justice Warren invited the district courts to use their imagination broadly when the use of equitable powers became involved in the school desegregation cases. He has a good paragraph on this in the second Brown decision of 1955.

DRAFT—PROPOSED SUBSTITUTE FOR PART (B) OF THE ROGERS BILL

"(B) Add the following as subsection (D) and designate the present subsection (D) as subsection (E), etc.

"Suit against state office as a legal entity. When any proceeding brought under this section claims that a deprivation of any right, or privilege, secured by subsection (a) or (b) hereof has resulted from any act, omission, or practice of a public office or agency of this state, such state office or agency may be made a party defendant and sued as a legal entity in its common name or statutory title, without regard to whether such state office has capacity to sue or be sued in like manner under state law.

"In any such proceeding against a state office as a legal entity, service of process may be made (1) by personally serving a copy of the summons and of the complaint upon one or more of the state officers holding such office; or (2) by leaving a copy of the summons and complaint in the state office of such officer with the person who is apparently in charge of the office; or (3) if service cannot with reasonable diligence be made pursuant to (1) or (2) of this subsection, either because the state office proceeded against as a party defendant is vacant, or for any other reason, service may then be made by delivering a copy of the summons and complaint to the chief executive officer of the state in the manner provided by rule 4(d)(6) of the Federal Rules of Civil Procedure or by leaving a copy of the summons and complaint with the person apparently in charge of the office of the chief executive officer of the state.

"Any order, judgment, or decree rendered in such a proceeding against a state office as a legal entity shall be binding personally upon all individuals joined as parties and made subject personally to the jurisdiction of the court. Any other individual or person may be proceeded against for contempt if, with notice of such order, judgment, or decree, he acts in willful violation thereof, regardless whether he acts under color of state authority or acts to prevent or thwart the exercise of state authority consistent with such order, judgment, or decree.

"Proceedings under this section shall be tried before a single district judge pursuant to 28 U.S.C. 1343; the provisions of title 28, chapter 155, do not apply.

"The jurisdiction of the district court over proceedings brought against a state office as a legal entity shall continue over the parties until the court shall find there is no longer reason to believe that the pattern or practice complained of is likely to recur. The district court, in the continuing exercise of its jurisdiction in the proceeding, shall permit the joinder as parties plaintiff of all persons who thereafter apply to the voting referee pursuant to subsection (d) of this section. All costs, including filing fees, of persons so joined as parties plaintiff shall be borne by the United States, save that any person shall, before being certified by the court to register and vote, pay over the amount, if any, required by state law of all persons for the privilege of registering, and voting."

FEBRUARY 8, 1960.

Memo to: John D. Calhoun, Assistant Deputy Attorney General.

From: Bill Foster.

Subject: The Rogers proposal for voting referees.

This memorandum supplements a memo on this same subject which I put together a week ago for William Welsh, administrative assistant to Senator HART of Michigan. A copy of the earlier memo is attached.

In this supplementary memo I shall attempt to summarize three further points respecting the Rogers proposal that strike me as requiring some added thought:

I. Should a referee, once appointed, be limited to receiving applications only from those who claim deprivation of voting rights?

The language of the Rogers draft authorizes the referee "to receive applications from any person claiming deprivation as to the right to register or otherwise qualify to vote at any election * * *" My concern is this: the Rogers proposal sets up a possible dual standard for registration in the voting area. Local officials will retain the right to register, and some presumably may persist in registering white persons more or less in total disregard of the local registration laws. The refereee has the job of considering those persons whom the local officials have turned down. To equalize things the referee, I suppose, should try to match the local officials in disregarding the registration laws. Yet it seems to me an almost impossible task to ask that the referee set a standard which can correspond to that followed by local officials in registering whites to vote.

Two possible ways out of this occur to me, neither of them very attractive: First, give the referee, once he is appointed, authority exclusively to register all persons, white and black, for a period of time. Or, second, require all persons registered by local authorities during the period of the referee's appointment to appear as well before the referee in order that he may see for himself the qualifications of those who are being registered by local officials. Perhaps a third solution might be to permit the referee to subpena a sampling of already registered votera to determine what kind of criteria had been previously employed.

None of these is a simple answer. If it were practicable, I would prefer the first proposal, which is simply to put the voting district in receivership for a period of time and allow the referee to register all comers. Bad as this may be in terms of local repercussions, it doesn't seem to me any worse than to call in people already registered to determine from them the criteria earlier used by officials for registering whites.

II. Is the referee's authority confined to applicants who can show that they were members of the class of persons deprived of the right to register as a result of a "pattern or practice"?

My problem here is that conservative southern district judges may require each applicant to show, in order to apply, that he was turned down by local officials only for reason of his color. The language of the Rogers' draft doesn't have to be read this strictly, but I think it would help clear the air if, after a general finding of a proscribed pattern or practice, your legislative language permitted the referee to "receive applications from any person claiming any deprivation whatever as to the right to register, and so forth. * * *" I just don't want individual applicants compelled to make individual proofs that their constitutional rights have been denied them.

III. Should not some provision be made for the situation in which a State tries legislatively to repeal or otherwise abolish all provisions for further voter registration, intending to rely solely upon voters earlier registered?

The Rogers' proposal suggests that actions under 1971 be converted into suits against the State in the event either that local registration officials have all resigned or have been relieved of their jobs. With some stretching of this language it can be argued that a suit against the State is authorized also where the State seeks to abolish the registration function altogether so that no office whatever exists for registration purposes. I feel confident something of this sort will be tried. And I feel confident that some kind of court appointed receivership, to undertake registration for any elections which might be held after efforts to abolish local registration facilities, would win approval in the Supreme Court if legislative provision were made for it.

In my earlier memo, attached hereto, I have recommended that local election boards be treated as suable entities for purposes of 1971 proceedings, and have provided for various means of serving a summons in the event that service cannot be made upon local persons serving on these boards. I remain disposed to support action against the local boards as legal entities, and merely suggest that further provision be made for the situation in which the State seeks to abolish the boards altogether. In that case, I should think it possible to authorize a suit against the State, together with the appointment by the court in such an action of one or more persons to serve as registrars for the local district until the State once more makes suitable provision for registration. These acting as local registrars here would be comparable to receivers taking over in the total absence of any qualified management provided by the State.

In any event, I think something should be spelled out for the case in which the States try to abolish local registration laws altogether. Recall there have been decisions which have voided efforts to repeal statutes where the effect of the repeal is to deny constitutional rights. See *Atwood* v. *Kelly*, 127 S.W. 2d 555 (Tex. Civ. App.), where the court voided, as an impairment of contract, the attempted repeal of a statute authorizing special proceedings to collect delinquent taxes on relation of bondholders.

Notre Dame Civil Rights Conference—Part 18

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. BARR. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

4. MEMORANDUM FROM PROFESSORS BLACK, EMERSON, AND POLLAK, YALE LAW SCHOOL

LEGISLATION TO PROVIDE FOR FEDERAL VOTING REGISTRARS

The constitutional basis for the appointment of Federal registrars to register voters who are being denied the right to register or vote in Federal elections on account of race, religion, color or national origin is not open to serious question. This memorandum is not concerned with such constitutional issues. Rather it is directed at certain administrative problems which would arise in connection with the operation of such legislation. These problems must, of course, be considered in the light of past and recent experience with efforts to avoid and thwart Federal legislative and judicial action designed to eliminate discrimination.

I. Whether the administration of a system of Federal registrars should be the function of the Executive or of the judiciary

The first basic issue is whether the administration of a system of Federal Registrars should be a function of the executive of the judiciary. The Javits bill (S. 2783) vests this function in the executive; the Attorney General's bill in the judiciary. In our view the Javits bill is sound on this issue, and the Attorney General's bill is not. Although the appointment of a master or "voting referee" in a judicial proceeding is entirely proper where the problem is to deal with occasional cases of discrimination, that is not the situation with which we are confronted. The problem here is to investigate widespread discrimination, extending on a mass scale throughout 10 or more States; to remedy such discrimination; and then to supervise the new situation for a sustained period of time. The job can be done effectively only through the executive branch of Government.

No one would contend that the original function of registering voters should be assigned to the judiciary. But the task which a substitute Federal system will be called upon to perform is of a comparable order of magnitude. As the report of the Civil Rights Commission pointed out, the total number of Negroes registered in the South was 1.2 million in 1956, out of nearly 5 million Negroes of voting age in that region in 1950. This constitutes about 25 percent, as compared with a 60-percent registration of southern whites of voting age. If the percentage of Negroes allowed to register were brought up to the white percentage, this would mean a registration of 1.8 million additional persons. Even if the percentage of Negroes registering under a substitute Federal system were considerably less than this—say only a 10-percent increase in those of voting age—there would still be 500,000 to register. This is a substantial administrative task. It will require legal and administrative personnel, space and equipment, recordkeeping, supervision, and coordination. The judiciary is not prepared or equipped to perform a job of this sort.

The fact is that the Attorney General's bill is geared to provide Federal registration only in a very small number of election districts. As pointed out below, the bill makes necessary a full-scale judicial proceeding, including proof of a pattern of discrimination, in each election district before the Federal system of registration becomes operative at all. Since the Civil Rights Act was passed in 1957 the Department of Justice has brought only four such proceedings, and has so far been unsuccesaful in three of these. If the Southern States respond by increasing the number and decreasing the size of election districts, the effectiveness of judicially appointed voting referees would be even less. It seems clear that under the Attorney General's bill only a relatively insignificant number of Negroes would be registered.

Moreover, even if the system of judicial registration were practical, it would be most unwise to burden the Federal judiciary with this task. The courts should not be drawn so extensively and so minutely into explosive political controversies of this nature. Among other reasons, they have enough to bear now in the enforcement of the segregation decisions. Responsibility for the strictly executive function of voter registration must be assumed by the executive, with the courts performing their usual function of judicial review in those occasional cases where a doubtful issue of law emerges.

II. Circumstances under which the President is authorized to appoint Federal registrars

The next, and equally important, question relates to the method employed in making the decision to appoint Federal registrars. If the legislation is to be effective it must provide a simple, rapid procedure which will not become entangled in the complex adjudication of individual cases or otherwise enmeshed in the intricacies and delays of administrative or judicial litigation. Generally speaking, this question should be dealt with in a manner appropriate to its real nature, that is, as a matter of legislative policy. Under the constitutional power to regulate the "times, places and manner of holding elections" the decision whether to leave registration to State authorities or to appoint Federal registrars is an issue for legislative determination. Congress alone has the power to make that decision or to delegate it to the Executive under appropriate standards. The issue is legally and practically a legislative one—essentially a political one in the broad sense—and not a judicial or quasi-judicial one.

The dangers in establishing a formal administrative or quasi-judicial procedure for determining when to appoint Federal registrars are apparent from an analysis of S. 2783 (the Javits bill). Under the procedure there contemplated it is first necessary that nine persons from an election district who allege they have been "denied" the right to register file sworn statements containing "a detailed account of the facts." The Civil Rights Commission is then required to "conduct an investigation" to determine "whether or not the allegations contained in such petitions are true." On the basis of an investigation of those petitions (and only those), the Commission "determines" whether "citizens" (the number not specified) are being deprived of the right to register, and certifies "that fact" to the President. Only after this process has been completed is the President authorized to appoint a Federal registrar.

The procedure required by S. 2783 raises a host of questions which could serve as the basis for protracted litigation in each case over the validity of the decision to appoint the registrar. Questions could be raised, and fought before the Commission and through the courts, as to whether the petitioners had been "denied" the right to register; whether the petitions contained a "detailed" account of the facts; whether Commission subpenas employed in the "investigation" were valid; whether the determination of the Commission had been preceded by a proper notice and hearing; whether State officials or others had been granted the right of confrontation and cross-examination; whether the commission's attorneys had produced enough evidence to show that the "allegations" were "true"; whether State officials and other parties had the right to file briefs and make oral argument; whether the Commission had made sufficiently detailed findings of fact or proper conclusions of law; whether a court on judicial review could find "substantial evidence" to support the Commission's "determination"; and other matters of fact, procedure, and law. Even if the Commission were in the end held to have acted legally throughout, an enormous amount of time would have been consumed.

The complexities just enumerated are multiplied in the Attorney General's bill. Here the appointment of "voting referees" would hinge, not on the completion of an administrative proceeding plus limited judicial review, but upon a more formalized and prolonged judicial proceeding. Further, it would not be sufficient under the Attorney General's bill to prove merely individual cases of discrimination but, in addition, it would apparently be necessary to prove a "pattern or practice" of discrimination. Experience with the proof of systematic discrimination against Negroes serving on juries gives some indication of the intricate factual and legal issues involved.

Moreover, the procedure required by both S. 2783 and the Attorney General's bill gives rise to other difficult questions. How can an "election district" be defined so as to prevent a State from creating innumerable small districts in which it might be hard to find nine petitioners, or which would require an innumerable number of determinations for the Commission to make? How many citizens is it necessary to find were deprived of their right to register? Must the denial have been solely on the ground of race, so that any other added ground would not permit a Commission certification? Furthermore, even the Commission itself is only a temporary body whose continuance might not be voted by Congress.

Finally, all the foregoing difficulties might be multiplied if the States were to adopt annual or biennial registration laws, thus requiring the Commission's or court's determination to be made over again in each case for each election.

What is needed, therefore, is a procedure for making the initial determination to appoint Federal registrars which does not depend on formal proof of the facts in individual cases and which can otherwise be insulated from legal issues that can be endlessly litigated before the Commission and the courts. We see no way of accomplishing this except by delegating to the President authority to appoint a registrar in any election district where he has reason to believe that citizens are being denied registration on account of race, religion, color or national origin. Such a procedure would eliminate all quasijudicial and judicial adjudication at this stage and also solve the drafting problems involved in defining an election district so as to prevent manipulation by the States, in determining the number of cases of denial necessary, in stating the precise nature of the denial required, and in establishing a special administrative body to make the determination.

This method of appointing Federal registrars is wholly appropriate for the kind of decision that is involved. Like all determinations of legislative policy, the decision should turn upon general conditions existing in an area, not upon whether any particular individual has been denied his constitutional rights. Insofar as the decision is considered an executive one, it is strictly comparable to those situations where the executive is entrusted with authority to institute proceedings or begin a prosecution, an action which is not required to be performed in accordance with any kind of quasi-judicial process. In terms of normal government practice, therefore, the method proposed is commonly accepted and fully justified.

Nor is the method subject to constitutional objection. The rule against excessive delegation of legislative power is met by the fact that the standard under which the President acts is clearly stated and is far more definite than numerous delegations which have been upheld by the Supreme Court. The requirements of procedural due process, to the extent they are applicable here at all, are satisfied. Under the Constitution the States have authority, in the absence of Federal regulations, to determine the times, places and manner of holding elections. But the Constitution gives the Federal Government power to supersede the State regulations at any time and to any extent that Congress deems desirable.[1] Certainly the States have no constitutional right to challenge the procedure by which Congress asserts its power. In any event, in this case, the greater power would include the lesser; if Congress can appoint Federal registrars for all Federal elections the States cannot object if Congress chooses to exercise that power only under specified circumstances as determined by its delegated representative, the President. It is equally clear that no voter is being deprived of due process by the procedure here suggested. The voter's constitutional right is the right to vote; he has not suffered any injury unless and until he is illegally deprived of that right, or possibly others are illegally granted that right. Surely he does not suffer any legal injury when a Federal registrar is appointed to whom certain applicants can resort in lieu of a State registrar if they so desire.[2] In any event, as noted above, the procedure involved is a reasonable and customary method for making decisions of this kind.

It may be added that a similar procedure for withdrawing the Federal registrar, that is, on the President's statement that he has reason to believe discrimination is no longer taking place, is equally reasonable and valid. Such a procedure for terminating Federal action is contained in the present Javits bill.

One other factor in the Presidential decision to appoint a Federal registrar requires consideration. It may be that the President, as a matter of policy, would not want to designate a Federal registrar unless there is some indication that a reasonable number of potential Negro voters in any area wished to avail themselves of the Federal machinery for registration. It might be advisable, therefore, to provide in the legislation, as a prerequisite to Presidential action, that at least 50 persons in any county or parish petition the Civil Rights Commission (or if that body ceases to exist, the Civil Rights Division of the Department of Justice) requesting the appointment of Federal registrars. Such petition need not allege discrimination, or be signed by persons discriminated against, but could be filed by any residents of the county or parish believing themselves qualified to vote. Upon the filing of this petition the President would be empowered to apopint a Federal registrar for any election district in the county or parish if, as above stated, he had reason to believe that citizens are being denied registration on account of race, religion, or national origin. This provision would carry out the purpose of the Civil Rights Commission's proposal that nine petitions be filed, without encumbering the procedure with the

---

[1] It is true that article I, section 4, of the Constitution, giving Congress power to regulate the "times, places and manner of holding elections," expressly refers only to elections of Senators and Representatives. But it seems clear that a similar power resides in Congress to protect the integrity of all Federal elections (*Ex parte Yarbrough*, 110 U.S. 651); and to insure equal protection and the absence of racial discrimination, against State action, in all elections (14th and 15th amendments).

[2] It is possible, though not certain, that the validity of the President's appointment could be raised as a defense to a criminal proceeding against a State official for refusing to allow a Federally registered voter to vote. But the raising of the point at this stage would not delay the appointment of the Federal registrar, would put the risk of being correct on the defendant, and would subject the defendant to the burden of proof necessary to overcome the usual presumption of administrative regularity.

requirement of adjudicating the correctness of individual claims of discrimination. And it would be fully in accord with the traditional right of citizens, as guaranteed by the Constitution, to petition the Government for redress of grievances.

In determining whether to appoint a Federal registrar the President would, of course, avail himself of the information and facilities of the Civil Rights Commission and the Department of Justice and would, in practice, undoubtedly act upon their recommendation. But, as stated, no formal recommendation or adjudication of individual cases would be required.

III. Upon the appointment of a Federal registrar, what persons may apply for registration?

Once a Federal registrar has been appointed, the category of persons who should be entitled to register with him must necessarily be described in reasonably broad terms. It would scarcely be suggested, for instance, that only those persons should be allowed Federal registration who have proved in an administrative or judicial proceeding that they have been personally denied State registration on account of race, religion, color, or national origin. In practical terms, the significant issue here is whether Federal registration should be limited to those who have actually applied to the State authorities for registration, or possibly exhausted State procedures, or whether it should be extended to all persons within the class that has been discriminated against.

The former requirement would plainly be too narrow. This is true because many of the devices used to discourage Negro registration in the South have been designed to prevent the Negro from even attempting to register. Such devices range from physical intimidation and threat of economic reprisal, to long delays in registration procedure, inconvenient hours, short periods, placing registration offices in the homes of white people, resignation of registration boards, and many other similar methods. These devices have been successful in forestalling large numbers of Negroes from trying to register. Indeed, there can be little doubt that the number of Negroes who have never made the attempt, but who would do so if there was any chance of success, is many times greater than the number who have actually gone to the State registration offices and tried to register. Although more would undoubtedly make the attempt if it were made a condition of Federal registration, some would not and in any event there is no sound reason for requiring them to undergo the loss of time, expense, risk and affront to dignity involved. Moreover, proof of this fact would add another complexity to the procedure.

It may be argued that requiring Negroes to first present themselves to the State officials would put pressure on those officials to reform their procedures, thus allowing the Federal registrars to be withdrawn sooner. But this would seem to be a matter entirely within the control of the State officials. When they are ready to treat all equally, it should not be difficult for them to make that fact known. In any event such advantage as might be gained from requiring an attempt at State registration as a preliminary to Federal registration is decisively outweighed by the disadvantages.

S. 2783 is somewhat ambiguous on this vital point. It provides that all persons "who allege that they are being denied the right to register to vote in such district solely because of their race, religion, color or national origin" may apply for Federal registration. The point should be made entirely clear. And it should allow no opportunity for reprisals on the basis of claimed false allegations. We suggest, therefore, that the legislation extend the Federal protection to all who are members of the category—of race, religion, color or national origin—that the President has reason to believe are being discriminated against, as stated in his decision to appoint Federal registrars.

After all, what is being sought by this legislation is merely to create an alternative means of allowing a member of a discriminated group to enjoy his constitutional rights. There is no need to confine those eligible to receive this protection by narrow limits which would make difficult or impossible the attainment of that objective.

Notre Dame Civil Rights Conference—Part 19

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. DENTON. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on February 14, 1960:

IV. Administration of a system of Federal registrars

The administration of a system of Federal registrars, as already observed, requires some attention. It would be possible to establish the Civil Rights Commission as a permanent or semipermanent agency to assist the President in administration. If this is done the legislation would have to make provision for the creation, composition, authority and powers of such a body. However, it is not essential that such an agency be established. The President would have power to delegate by executive order most of his functions, except the actual appointment or withdrawal of Federal registrars, to the Civil Rights Commission (as long as it existed) or to the Civil Rights Division of the Department of Justice. This second course of action has the advantage of greater flexibility and avoids creation of a new agency. It might be the more advisable one unless the Commission is retained for other reasons.

Under either alternative, however, the legislation should make express provision for adequate staffing and appropriations.

V. Enforcement of the right to vote

Another key problem is to make as sure as can be that the Federal system of registration is not interfered with, and especially that a person registered by a Federal registrar is actually allowed to vote and to have his vote honestly counted.

The principal sanction to accomplish this, under the scheme here envisaged, must be the criminal prosecution. Although the Attorney General is skeptical of the effectiveness of criminal prosecutions there is reason to believe that, at least in many areas, they would be a potent factor. In the first place, the difficulty of obtaining an indictment or conviction by southern juries is less likely to prevail in voting cases than in some other types of cases. Secondly, if the penalty is made a misdemeanor (a year or less in prison) the initiation of a prosecution does not require an indictment by a grand jury but may be brought by the U.S. attorney through the filing of an information. Thus a trial can be assured, and where the evidence is open to public scrutiny there is less likelihood of a failure of justice than where the evidence is considered in secret by a grand jury. Moreover, the very fact of bringing a violator to trial has an important impact even where there is an unjustified acquittal. Finally, if southern juries persist in refusing to convict, and thus thwart the objectives of the legislation, the obvious and inevitable remedy (of which the South is well aware) is further legislation authorizing the full Federal control of elections.

Criminal provisions in the legislation should cover the following points:

(1) The sentence provided should be up to 6 months in prison (possibly up to a year), or a fine up to $1,000, or both. The provision in S. 2783 for a fine of $300 seems too small to be adequate.

(2) The penalty should apply to any person who willfully interferes by violence, intimidation, economic reprisal, or threats thereof with persons seeking to petition for appointment of a Federal registrar or seeking to register with the registrar once he is appointed; or who by similar means otherwise interferes with the Federal registration process; or who attempts in any way to deny to an individual registered under the act the right to vote or to have his vote counted for any candidate for Federal office. S. 2783, which limits the criminal penalty to the last clause, and applies only to State election officials, seems too narrow in this respect.

(3) A saving clause should be included which makes clear that the enforcement provisions are not intended to repeal or amend any other provision of law already in existence. This is necessary to keep available the provisions of sections 241 and 242 of title 18 of the United States Code, and possibly other applicable criminal provisions, as well as all existing civil remedies.

An important adjunct to the criminal sanctions may be civil proceeding for damages, injunction, and other equitable remedies. Injunction proceedings, for instance, may be of great significance in many situations, as where a bona fide issue of law is involved or criminal proceedings seem not feasible. Although existing civil provisions may be adequate, provided they are kept in force by the saving clause, it would seem advisable to include in the legislation express provision for the Attorney General or private persons to secure civil relief, through damages, injunction, or other equitable remedy, against interference with the Federal registration process, or denial of the right to vote or to have the vote counted of any person registered by the Federal registrars.

In addition the provisions in the Attorney General's bill for the issuance of certificates to those found qualified by the Federal registrar, and for Federal watchers at the polls, are desirable and should be included.

VI. Application to State elections

There would appear to be no basic constitutional objection to the application of the system of Federal registration to State elections. The Attorney General's bill so provides. It is not clear, however, that such an extension of the legislation is necessary, at least at this time. The possibility of "Jim Crow" elections, with State officials being elected at different times or places, as envisaged by the Attorney General, may never in fact occur. Moreover, the simplified procedure for the designation of Federal registrars and the broad opportunity for applying for Federal registration, as here proposed, may encounter more opposition were the system extended to State elections. Under the circumstances it may be advisable to confine the legislation, for the present at least, to Federal elections.

VII. Summary

In summary, legislation to establish an effective system of Federal registrars should include the following provisions:

(1) The power to appoint Federal registrars should be assigned to the executive, not to the judicial, branch of the Federal Government.

(2) The President should be empowered to appoint a Federal registrar in any election

district where he has reason to believe that citizens are being denied registration on account of race, religion, color, or national origin. It might be advisable to require as a condition of Presidential action that a petition be filed by at least 50 persons residing in any county or parish, who believe they are qualified to vote, requesting the appointment of Federal registrars in such county or parish.

(3) Once a Federal registrar has been appointed for any election district, all persons in that district who are members of the category—of race, religion, color, or national origin—that the President has reason to believe are being discriminated against, as stated in his designation, should be eligible to apply to the Federal registrar for registration.

(4) Provision should be made for adequate staffing and appropriations. If the Civil Rights Commission is continued for other reasons, it can be given authority to assist the President in the administration of the Federal registrar system.

(5) Criminal provisions should be included, making it a misdemeanor willfully to interfere by violence, intimidation, economic reprisal, or threats thereof, with persons seeking to petition for appointment of a Federal registrar or seeking to register with the Federal registrar, or by similar means to otherwise interfere with the Federal registration process, or to deny an individual registered under the act the right to vote or to have his vote counted for any candidate for Federal office.

(6) Civil provisions should be included permitting the Attorney General or private persons to secure civil relief, through damages, injunction or other equitable remedy, against persons interfering with the Federal registration process or seeking to deny the right to vote or have the vote counted of any person registered by the Federal registrar.

(7) A saving clause should be included making clear that the above enforcement provisions do not repeal or amend any other provision of law already in existence.

(8) The legislation, at least at this time, should apply only to Federal, not State, elections.

NEW HAVEN, CONN., *February 2, 1960.*

Great White Father's Chosen Negro Leaders

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Age, February 20, 1960:

A STONE'S THROW—GREAT WHITE FATHER'S CHOSEN NEGRO LEADERS

(By Chuck Stone)

CHIEF STANDING BULL. Colored man, why you come talk to Chief Standing Bull?

NICODEMUS. Chief, like I'm confused. And, man, so much is happening these days with us Negroes—well, like, Chief, you've just got to give us some advice. I think some of us are being had.

CHIEF STANDING BULL. Why you no go to great Greek master of logic, Socrates? Him give you advice before.

NICODEMUS. O, Sock, he swings. And he comes on strong with the dialectics. But, man, he doth not understand the intricacies of our color problem. I figure you were tangling with the white man long before we Negroes were a problem, perhaps you could showed enlightenment upon our predicament.

CHIEF STANDING BULL. You askum. Me answer.

NICODEMUS. How come the white man doesn't like ADAM CLAYTON POWELL?

CHIEF STANDING BULL. You askum easiest question in books. White man no like ADAM CLAYTON POWELL because him fight white man way white man fight him. White man, him lynch Negroes, blow up schools, build ghettos, no givum decent jobs, packum Negroes into rat houses. ADAM POWELL, him tell Negroes to fight back. White man no like it when you fight back. ADAM POWELL tell Negroes do war dance, get voting rights. White man think POWELL drink firewater.

NICODEMUS. But what about the charges that POWELL is a racist?

CHIEF STANDING BULL. You gottum black skin, but askum white man's question. ADAM POWELL, him gottum white skin, but him fightum good, like black man should. ADAM POWELL, him no racist. Him only fightum way white man teach him. When white man think you rise too fast, him call you "racist" and say you makum "terrible" leader. White man, him shrewdest animal in forest. Him no like tough leadership.

NICODEMUS. But, the white man calls other Negro leaders good men. For example, the City Club in New York City said that Jackie Robinson and Roy Wilkins were "marvelous Negro leaders." How about that?

CHIEF STANDING BULL. You talk mouth full of cornmeal. No wonder American Negroes no go nowhere fast. Great white father, him like Roy Wilkins and Jackie Robinson because they play game according to white man's rules for black men. They go not so fast, not so far, not so hard. They only talk tough in South. In North, both men, heap big quiet.

White men pay their salaries. If Jackie Robinson talk big, white man fire him from his job in coffee company. White man on newspaper, him kick Jackie off too when him gettum up big talk. Jackie, him tellum white man what he wants to hear. Him talk "reasonable talk." Roy Wilkins, him no different. Him speak mad when Negro gettum lynched. Him puttum hand over eyes and foot in mouth when Negroes gettum big kick in the pants in New York wigwam.

NICODEMUS. But don't you think we need different types of Negro leaders even if they disagree with each other?

CHIEF STANDING BULL. White man, him think so. Him use policy all same over world—divide and conquer. Him take Negroes like Jackie Robinson, pat him on back, tellum get angry only sometime. Cuddle him next to how you call him, "Mister Charlie."

NICODEMUS. Well, you've got to admit that ADAM POWELL'S statements are inflammatory and that they are stirring up Negroes.

CHIEF STANDING BULL. ADAM POWELL, him no stir up. Him only mix what already there. White man stir up. Great white father Kennedy who sittum in big chief sheriff chair, him say "no puttum Negroes in high jobs." Him use phony issue of race. Him makum Negroes mad. Police commissioner, him stir up, not POWELL. Him play footsies with white man in South. White man in South, him say "regardless of race, creed, or color," and him lynch only Negroes. Kennedy, him say "regardless of race, creed, or color," and appoint only paleface. Him also dangerous.

NICODEMUS. Well Chief, I've got to admit you've talked a lot of sense. Let me ask you just one more question. What should we do about George Meany?

CHIEF STANDING BULL. Easy. Burnum at stake.

Clinton M. Hester

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Sporting News of January 6, 1960, about Mr. Clinton M. Hester, a distinguished attorney and good friend of mine since my boyhood:

(By Jack Walsh)

WASHINGTON, D.C.—One of the top attorneys in the Nation's Capital seems supremely confident that professional football will be provided remedial legislation in the second session of the 86th Congress reconvening on January 6.

Clinton M. Hester, counsel for the National Football League and one of the leading corporation lawyers in the country, has been working diligently in this direction for almost 3 years.

In an interview with the Sporting News, Hester said: "Both the Senate and House subcommittees dealing with sports legislation and their respective chairmen, Senator ESTES KEFAUVER and Representative EMANUEL CELLER, have been so sympathetic with the antitrust problems of professional football that I feel quite sure a remedial measure will be enacted during this coming session."

BILL STALLED IN SENATE

A bill that would have granted exemption under antitrust laws for the player draft, option of reserve clause, territorial rights, and certain television practices for all professional sports sailed through the House of Representatives in the 85th Congress, but the Senate failed to act before it adjourned.

In the 1st session of the current 86th Congress, the Judiciary Antitrust and Monopoly Subcommittee headed by KEFAUVER held hearings, but the full committee didn't act because of lack of time.

Now a bill providing antitrust exemptions for professional football, basketball, and hockey has been reported out to the full Judiciary Committee of the Senate and action on it is expected early in the new year.

This bill makes no mention of professional baseball. Rand Dixon, capable counsel of Kefauver's subcommittee, said: "I think the Senators may be waiting to consider baseball separately or to see if those in the game can solve the problem by themselves."

There's some feeling on Capitol Hill, too, that the Continental League, struggling to get off the ground, may be coming around to seek some help.

BASEBALL IN DIFFERENT CATEGORY

Dixon and many other attorneys also are quick to point out that baseball's situation is different. Because of the 1922 Supreme Court decision, in effect reaffirmed in the Toolson case in 1953, baseball is held not engaged in interstate commerce and therefore not subject to antitrust laws.

Because of these Supreme Court decisions baseball has been content to go along as it is.

In the 1957 Radovich decision, on the other hand, the Supreme Court declared that professional football is engaged in interstate commerce and subject to the antitrust laws. That decision also carried a recommendation that Congress eliminate the obvious discrimination between baseball and the other sports.

The Radovich decision plainly placed professional football in legal jeopardy. Officials of the National Football League have been busily seeking congressional help since.

Hester came on the scene to provide legislative representation for the National Football League shortly after the Radovich decision.

"It was pretty much by accident," Hester said. "I was in the Fairmount Hotel in San Francisco when I bumped into Edwin J. Anderson of the Detroit Lions. Andy and I are long-time friends. He mentioned the situation to me and I became interested. He put Bert Bell, the late great commissioner, in touch with me."

After meeting with Hester, Bell came to Washington and pounded the marble corridors. He personally buttonholed scores of Senators and Representatives with his story on pro football.

WORKED CLOSELY WITH BELL

Hester, who knows most of the Members of Congress personally, accompanied Bell. The relationship quickly became closer than that of lawyer-client.

"I loved Bert Bell," Hester said. "He certainly was one of the greatest fellows I ever met in my life. He was tireless in his efforts to explain his league's draft of collegiate players and all its inner workings.

"He was on the go from 7 in the morning until late at night and started wearing me out. I was shocked when I discovered that he was a sick man and under doctor's care. I used to insist that he take things easier, but he'd just keep going."

Later, Bell always delighted in telling everybody what a shock most taxpayers would get if they knew how hard their Representatives in Washington worked.

"I was there early in the morning and late at night and they always were on the go," Bell said. "If they ever enforce the wage-hour law in the Government, Congress will go out of business."

Hester continued: "It was a fine experience to get to know and work with a man like Bert Bell. We became very close, but for some reason never got on a first-name basis. I always called him Mr. Bell or Mr. Commissioner. In turn, he called me Mr. Hester.

"It got embarrassing to me. I asked him to please call me Clint. Bell replied: 'As long as I live, you'll be Mr. Hester to me.'

"One wonderful thing happened to him. Before he died last October, Bell knew that the Senate subcommittee had come around to agreeing with him that the draft of college players was an important way to equalize playing strength and not the unreasonable restraint it seemed on the surface.

"As you know, the draft was Bell's brainchild. It was proposed by him and adopted by the league in 1935. Bell came up with the idea when he was a struggling club owner with his Philadelphia Eagles. He felt it was the only way the poorer clubs would have a chance to compete.

"No one now questions that keen competition has made pro football great. And in the long run everyone in the game has profited."

Hester was asked what impressed him most about Bell. Unhesitatingly, he replied: "His great devotion to his family." Bell left a widow, the former stage star, Frances Upton; two sons, Upton and Bert, Jr., and a daughter, Jane.

Bell's capacity for work must have impressed Hester, too. He is an indefatigable worker himself. Hester said: "Here I am nearly 65 and I honestly feel my work gets more interesting every day of my life."

Hester, who represents and is a confidant to some of the biggest business executives in the country, came up the hard way. Born in Des Moines, Iowa, April 16, 1895, he was the son of a minister.

SERVED AS JANITOR IN HIGH SCHOOL

In his youth he struck out for himself. He worked while attending Missoula (Mont.) High School, where the principal, Gilbert A. Ketcham, proved to be a great friend, adviser, and benefactor.

Hester recalled, in the commencement address he delivered back in Missoula last June, that he served as janitor of the gymnasium at $10 a month and was allowed to sleep in a small room there. Although busy with several odd jobs, he found time to compete in football, basketball, baseball, and track.

He left Missoula in 1915 and planned to accept an athletic scholarship at the University of Chicago. However, he was persuaded by a graduate to attend Phillips Exeter Academy in New Hampshire for a year.

Hester related that Principal Ketcham was intrigued with the idea of a poor boy attending a great school like Exeter. Hester said: "I told him the fact that authorities thought it would be impossible for me to work my way through school made me desire to go there all the more.

"I asked him for his advice—and he said something which I have adopted as a part of my life's philosophy. He said nobody ever got anywhere in life unless he took a chance. He was saying what the great English author, John Dryden, had said before him: 'Fortune befriends the bold.'"

Hester arrived at Exeter with $25 in his pocket. The headmaster was so astonished that Hester had traveled across the country on the mere hope of being accepted that he admitted him.

PLAYED FOOTBALL AT COLLEGE

After leaving Exeter, Hester enrolled at Colgate University and was on the football team when World War I came along. After seeing action in France, he returned to this country and went to Washington.

A structural steelworker by day, he attended George Washington University at night and received his bachelor of arts degree in 1920. He attended Georgetown University at night, too, and there received his law degree.

Hester then took a post as junior attorney with the old Shipping Board and remained in Government service until 1940, when he resigned as the first Administrator of the Civil Aeronautics Authority.

"I had a wonderful experience with the Government," Hester said. "I worked for all three branches—executive, legislative, and judicial. Looking back, though, I think the most interesting phase was working with congressional committees."

Hester received powerful tributes from some of the most prominent leaders when he left the Government.

Senator Pat McCarran of Nevada, who said he had many honest disagreements with Hester, added: "When Mr. Hester goes out of the public service, the Nation will lose a great man. I only say that the gain of private life is the loss of public life."

TRUMAN ALSO PAID TRIBUTE

Former President Harry Truman, then a Senator from Missouri, joined in McCarran's tribute.

The late Senator Alben Barkley of Kentucky, later Vice President, said: "I have known Mr. Hester for a long time in the Treasury and other departments. I have the greatest respect for him, and I have the greatest confidence in his ability and his sincerity and his integrity."

President Franklin D. Roosevelt, in accepting Hester's CAA resignation, wrote: "This will bring to a close your splendid record as a carecr man in Government service in which you have advanced rank by rank until you became Administrator * * * you have in a brief space of time brought civil aviation in this country to its highest peak."

Roosevelt later appointed him to the National Advisory Administration for Aeronautics. On that agency, Hester served with Orville Wright and Charles A. Lindbergh.

LAUDED BY SENATOR M'CARRAN

In his tribute to Hester, Senator McCarran also said: "There are some men who are great by reason of their achievement; there are some men who are born great; but a man who, growing out of obscurity, works himself up to a position of greatness should never be forgotten."

Certainly, Hester has come a long way from the struggling days in little Missoula or even in Washington when he worked long and hard as he fought for an education.

He now owns a fabulous 1,000-acre estate, Bath Alum Farms, near Hot Springs, Va. It is nestled in the Allegheny Mountains and is surrounded by more than 100,000 acres of national forest land.

The handsome, 20-bedroom home of colonial architecture is a showplace. On the grounds are a trout stream, a bass lake and a large herd of cattle. Wild life includes deer, bear, wild turkey, grouse, quail and pheasant.

Hester, who hasn't taken a vacation in 30 years, says he gets his relaxation at his place, where he enjoys holding hunting and fishing parties for some of the top diplomatic figures, Government and military leaders and just friends.

As welcome as the top brass, and treated as cordially, are Hester's own employees and farm and hunting neighbors.

When Hester entertains, there are no halfway measures. Still an aviation enthusiast, he owns a twin-engined Cessna 310. At his Bath Alum estate, he built a 3,600-foot runway accommodating large twin-engine aircraft. He thinks nothing of chartering a DC–3 and taking guests on the one-hour flight from National Airport to his front door.

Hester's chief hobby is American history. He delights in flying low in a small plane over historic Virginia, dipping down and pointing out such things as the former wilderness birthplace of John Marshall, our first Chief Justice.

"I've studied history from the time I was a child," Hester said. "Most of all, I'm fond of biography. Studying the trials and errors of great men, and trying to avoid their mistakes, is the finest education I know."

Freedom for Lithuanians

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. FASCELL. Mr. Speaker, the memory of the Communist annexation of Lithuania and the determined spirit of those Lithuanians who are residing with us in the United States, should act as a persistent reminder of the deplorable conditions under which many humans are forced to live.

We are all aware of the cold war and its effects. However, mere awareness is not enough. The situation is an urgent one which demands that each of us be constantly alert to new solutions or actions that might feasibly contribute to alleviating the Communist threat to human freedom.

The Americans of Lithuanian descent of the city of Miami, Fla., have recently celebrated the 42d anniversary of the Declaration of Independence of Lithu-

ania. They commemorated the occasion by adopting the following resolution:

Resolution unanimously adopted at a mass meeting of Americans of Lithuanian descent of the city of Miami, sponsored by Lithuanian Council of Miami and held February 14, 1960, at the Miami American Lithuanian Citizens Club to commemorate the 42d anniversary of the declaration of independence of Lithuania:

"Whereas in 1940 the Kremlin rulers in conspiracy with the Hitlerite Germany and in brutal violation of international law, invaded Lithuania and, against the will of the Lithuanian people, annexed her to the Soviet Union: Therefore be it

"*Resolved,* That this gathering of loyal Americans of Lithuanian descent of the city of Miami, calls upon the Government of the United States to stand firm against the expansion of Communist imperialism and to do all in its power to prevent further spreading of Communism in the free world; be it further

"*Resolved,* That this meeting asks the Government of the United States to refrain from signing any new treaties with Soviet Union until the latter agrees to restore freedom and sovereign rights to the Lithuanian people and to other enslaved eastern European nations."

LITHUANIAN COUNCIL OF MIAMI,
———— ————, *President.*
Mrs. JENNIE GOODWILL, *Secretary.*

Vassar To Celebrate 100th Anniversary

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to announce that during the year 1961, Vassar College will celebrate its 100th anniversary, which centennial celebration will emphasize its responsibilities and contribution to present and future generations.

Matthew Vassar's great vision a hundred years ago brought into being Vassar College, a pioneer in the field of higher education for women.

A full-fledged college for women, to teach them the arts, the sciences, the languages, the social sciences on the same level with men: astronomy and mathematics, history and philosophy, Greek and German, chemistry and biology, as well as music and art. A new epoch in the history of American education.

Vassar College indeed made history. The new institution produced glorious leaders in the women's rights movement and saw the founder's vision justified in universal suffrage. Its graduates opened the doors into the great professions theretofore closed to women. Most important of all, Vassar began to develop that new breed of woman, the enlightened mother and active responsible leader in community, State, and Nation.

Thus did Vassar succeed in its theory of a true liberal arts education for women: not domestic science, not typing and shorthand, not arts and crafts; but thorough training and genuine learning in the great areas of human knowledge and thought. Study and reading, listening and discussing, research and exploring train the Vassar student and make the Vassar graduate.

Educated women! The professions welcome them; business searches for them; industry lures them; government begs for them; schools cry out for them; families need them; men marry them.

Vassar will continue to make history as it enters its second century.

Anna K. Owens, Maine Champion, Speaks for Democracy

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. OLIVER. Mr. Speaker, I recently attended the 13th Annual Voice of Democracy Awards luncheon, sponsored by the National Association of Broadcasters, the Electronic Industries Association and the Veterans of Foreign Wars.

It was heartening for me to observe the outstanding young representatives from each of our States and the District of Columbia. Their inspiring essays helped me to place in proper perspective some of the recent reports relating to the spread of juvenile delinquency. Many of our youths not only recognize the value of our democratic form of government, but are most articulate in describing this value in terms that convey to others democracy's true meaning.

Miss Anna K. Owens of Scarboro, Maine, who represented my State, noted that every citizen in a democracy must work to preserve the freedom and independence which he enjoys. If Americans cease to be vigilant, Communist domination and subversion could threaten our American way of life. As Miss Owens states:

Democracy requires work. It is so easy to live under a dictatorial regime, so hard to live with democracy. * * * We must prepare ourselves for the challenging responsibilities of democracy. Are we equal to the task?

Freedom brings with it certain responsibilities; responsibilities which require positive contributions to public life. Miss Owens' challenge is one that we all, youth and adults as well, must meet successfully.

At this time, I would like to include the full text of her remarks in the RECORD:

I SPEAK FOR DEMOCRACY
(By Anna Owens)

Praises echo the many facets of democracy in America. We gloriously state that democracy is a government "for the people." We display our freedom before the world; we proudly explain our revolution that won us that freedom. Poets and writers have retold the wonders of democracy for generations. Yet, is it only the poet who, ahead of his time, realizes the truths of our democracy?

I have said that we "display" our freedom before the world. When we shout the praises of democracy to the less fortunate nations, we are not doing this to be pretentious. We realize that we have achieved a height beyond that of any other government. Perhaps we are struggling to comprehend the vastness of this Government, to render it justice. We cannot fully understand its greatness. However, recognizing greatness is a step toward truth. We must realize that we have much more to grasp, even though we are on the right path. Writers have started the march: As Frost has said: "But I have promises to keep, And miles to go before I sleep." This applies to what we call personal everyday life. But wait, is not democracy everyday life? Is it not people—people reading recipes for stew in the evening paper, people crowding into buses and subways, people cheering football teams, people talking on the corner, people always wishing they could go farther and do more. Much can be learned about the purposes and values of democracy from just such people. Much can be learned, but we have miles to go.

Democracy requires work. It is so easy to live under a dictatorial regime, so hard to live with democracy. A dictator is not dreadful. Now there's a person who seems to know what he's doing; let's leave everything to him. His policies seem radical, but I'm sure he knows what's best. Besides, I just can't think of a solution. How easy it is to relinquish responsibility. How easy it is to find the simpler, shorter method. It takes time and forethought and patience to build a democracy and keep it running. We must prepare ourselves for the challenging responsibilities of democracy. Are we equal to the task?

Democracy means freedom for us. Do we cherish this freedom fully? William Somerset Maugham said: "If a nation values anything more than freedom, it will lose its freedom; and the irony of it is that if it is comfort or money that it values more, it will lose that too." When we talk with oppressed countries about freedom, we can speak so carelessly, only supposing on the extreme hardships of a dictatorship. We must not take our freedom lightly; however, it is American to be carelessly sincere. Love of freedom is a spark which glimmers in spite of dark despair. To those who know its value, to those who have been under a direct, cruel regime, a chance to live in freedom is bliss. We cannot give up our constant fight for freedom. We must work. There is no room for beggars of the spoils of democracy.

Democracy proudly rears her head in the world. She should be proud; for she withstood her early orientation, the dangers of tyranny, and all the criticisms of her way of life. We should be proud—proud beyond compare. We fight with pride for her ideals, for her truths, for her equality. Her birthday is a glorious event. In fact, it is a most spectacular birthday. What other nation flies as many jets, sets off as many fireworks, fires as many cannons, and eats as many hot dogs and puffs of cotton candy as America? We fairly burst with pride on this her day.

Democracy has the bearing of dignified humility. It will not bow to an unjust cause, but it will recognize true sincerity. Each citizen accepts the defeat of his views often in a democratic country. The self-centered person cannot find his niche within the framework. All thoughts are for the good of the Nation and every individual therein.

Democracy has keen sturdiness. Her principles are clad in compactness. Her very history is one of rugged beauty. The courageous citizens of stanch New England towns launched her career in America.

Democracy is for posterity. It aspires to the utmost in men; it dares them to be equal to the task. It constantly comes alive. It becomes a breathing effort to withstand the pressures imposed upon it. With a renewed, richer meaning, it faces each day. Democracy is our hope—a candle dripping its design upon the dark table of the world. Democracy will steadily reach for higher goals. It sets impossible standards only to prove that the impossible can become reality. Gently, gradually each generation will awaken to the wonder of that greatness which was not distinguished at once. Greatness comes on the wings of diligence, dignity, humility, and peace.

Federal Water Pollution Control Act

SPEECH
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mrs. PFOST. Mr. Speaker, Members of the House most certainly should vote to override the President's veto on the water pollution bill before us. Unless we do, we are not keeping faith with the citizens of America.

Today we hear a great deal of talk about meeting the Soviet challenge. But I believe, that in many ways, the job of meeting the needs of our own Nation and our own people poses every bit as great a challenge as the Soviet Union, for we cannot expect to successfully meet their challenge until we fulfill our own.

The Nation today is falling behind in the fight against wasteful pollution. The problem can be expected to grow more serious and more expensive to resolve with each passing year.

The President, in his veto message on H.R. 3610, emphasized that he recognized the rivers and streams of our country as a priceless national asset. But his solution was that same, timeworn administration tactic of putting off a job that has to be done by calling another conference.

I think Members of the House will agree that we have already had too many conferences and too much talk and too little action from the administration on the water-pollution issue.

I believe that H.R. 3610 represents a program of prevention. It recognizes that the job must be done now and that a dollar spent now will save the taxpayer many, many times the amount having to be spent to do precisely the same job in the future.

Water use in this country is expected to double within the next 20 years. The days are over when we can take water for granted. We cannot assume we are always going to have all we need because scientists tell us that this is not the case.

Our Nation's exploding population is putting an ever-greater strain on our water resources. Just to insure that America's tap be kept running, we have engaged in costly experiments in purifying brackish water and desalting seawater. But what is needed in addition to such experiments is the broad attack on the pollution problem that is represented in this legislation.

It is pollution that destroys the usefulness of water. Pollution is a topic on which too many people have become all too careless in America in recent years. New industries have boomed since World War II and they are tremendous users of water. The wastes that one such small chemical plant can pour into a stream, for example, can literally make that stream unusable as a water supply source for years. It is then, that the job or cleaning that stream takes on such grossly expensive proportions.

The magazine U.S. News & World Report, in its February 29 issue, contains an article posing the question, "How Pure is Your City Water?" It points out that the problem of keeping drinking water free and clear from disease-carrying organisms is becoming an increasing problem in many American cities.

The story describes the scientific research being done on the Nation's drinking water at the Robert A. Taft Sanitary Engineering Center in Cincinnati, Ohio. I recommend the article for reading by everyone. It concludes with this telling quotation from Bernard B. Berger, Chief of the Water Supply and Water Pollution Research Plant at the Center: "The burden on water is increasing. You put in a sewage treatment plant and there is unquestionably an improvement in water below the plant. Working against that, however, is the growing population and the increasing industrial establishment of the country. It is going to take a lot of effort to stay even with the problem and more if we are going to make any improvement."

I think that H.R. 3610 is one good answer to the question posed in the U.S. News & World Report article.

My own State of Idaho is one of the finest fishing and outdoor playgrounds in the United States. Maintaining stringent water pollution control and having modern sewage treatment plants in tip-top condition is vital to our well being and progress. Under the bill, Idaho would receive $1,060,065 for fiscal 1961, and I must add that every dollar would be put to good use in my State.

I think this legislation is sorely needed at this time. I emphasize again that an ounce of prevention now will save millions, and possibly billions, of tax dollars in the future. It is the future for which we must plan if we to create a strong and healthy America for our ever-growing population.

Toward a Happier Return

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting editorial which appeared in the Chelsea Record, Chelsea, Mass., on February 25, 1960:

TOWARD A HAPPIER RETURN

The U.S. income tax will be 47 years old today. Does anyone want to sing "Happy Birthday" to celebrate the joyous occasion?

When it was born in 1913, few people foresaw how the tax would grow. It started with a nibble of 1 to 6 percent. Now it gobbles 20 to 91 percent.

The result has been to eat up savings and capital and stunt the growth of the national economy.

A way to curb the damage has been suggested by Congressmen HOWARD BAKER, of Tennessee, and A. S. HERLONG, of Florida, with the backing of five other Representatives from Indiana, Texas, and Tennessee. They are sponsoring legislation to reduce the income tax rate in every bracket. Their proposal would ease the bite on all taxpayers. In addition, they predict the lower rates would spur economic growth which soon would put tax revenues back at their present level or even higher.

We wish Congress would observe the 47th birthday of the income tax by adopting the Herlong-Baker bills. It would mark the birth of a better day for taxpayers, and for the economy.

Additional Hearings Scheduled on TBA Marketing Practices

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. KING of Utah. Mr. Speaker, under consent to extend my remarks, I present a news release and statement which our distinguished colleague, the Honorable JAMES ROOSEVELT, made February 19, 1960, in which he announced that additional hearings will be held on the marketing of TBA items in the petroleum industry. Mr. ROOSEVELT is the chairman of Subcommittee No. 5 of the House Small Business Committee. His release, which includes his own statement, deserves the attention of the many Members who are concerned over the problems of small business, and is set forth as follows:

Representative JAMES ROOSEVELT, Democrat, California, chairman of Subcommittee No. 5 of the House Small Business Committee, after conferring with the Honorable WRIGHT PATMAN, chairman of the full committee, announced today that additional hearings relating to the marketing of TBA items in the petroleum industry are being scheduled by the subcommittee. Representative ROOSEVELT stated:

"The evidence documented at the December 9–11, 1959, hearings and the subsequent investigations by the subcommittee, indicate that it is both proper and necessary that additional hearings be scheduled. This is true not only for the purpose of giving the major oil companies an opportunity, under oath, to rebut the charges of coercion and intimidation aimed at them in relation to their marketing practices involving TBA items, but to also give the subcommittee an opportunity to further develop specific instances of coercion and intimidation brought to light at the hearings along with instances of possible retaliation which have

been brought to the attention of the subcommittee since the hearings.

"Plans are now being made for these additional hearings and an announcement as to the date and place of the hearings can be expected shortly. The length of the hearings and the date on which they will be scheduled will depend largely upon the number of major oil companies who desire to present evidence at the hearings. To date there has been no great interest shown by the major oil companies in appearing before the subcommittee, but there are indications that some of them will desire to do so."

In making this announcement, Representative ROOSEVELT points out that the subcommittee has been investigating specific instances which were brought to the attention of the subcommittee at the hearings on December 9–11, and subsequent thereto.

Among these is the situation involving a service station in Texarkana, Tex., wherein it was alleged that a Cities Service Oil Co. supervisor showed the service station operator a letter and told him he must give up his lease. The staff is investigating this matter and the subcommittee is now awaiting receipt of the letter in question from the Cities Service Oil Co. along with any other pertinent documents. It is expected that Cities Service Oil Co. may desire to appear before the subcommittee at its impending hearings.

Another matter investigated by the subcommittee involved testimony that a Shell Oil Co. salesman in the Detroit area had presented to a Shell service station operator a list of things that the operator must do or get out. This list was obtained by the subcommittee and it was ascertained that the station involved is a "C" station and the items referred to were in the main housekeeping items. It is obvious to the subcommittee, upon a study of the service station manager's agreement involved in this matter, that the Shell Oil Co. considers their "C" station managers, who are on commission, to be employees of the oil company and subject to the supervision of the oil company in all matters and that they can be discharged by Shell Oil Co. on 24 hours notice. Although Shell Oil Co., in their "C" station agreement with the managers, indicates that the managers may handle any brand of TBA merchandise they desire and by letter to the "C" station managers indicate that the manager is not obligated to purchase his TBA items from Shell or through Shell, the oil company goes further and states: "The extent to which we will enjoy your patronage must depend upon your voluntary acceptance of our products line and the service we are able to render." It is expected that the Shell Oil Co. may desire to appear before the subcommittee at its impending hearings.

Further information has been obtained concerning the tape recording played at the hearings on December 11, 1959, which clearly depicted the actions of a Sinclair salesman in insisting that the service station operator must remove competitive TBA items not sponsored by Sinclair from his shelves before Sinclair would renew his lease or negotiate a new lease. The subcommittee has obtained a duplicate original of the new lease now in effect between the operator and the Sinclair Refining Co. which reveals that it was negotiated and signed at the time that the tape recording was taken on the 28th of August and that the lease is effective from August 1, 1959, indicating a 3-week period from the time Mr. Thompson's old lease was up and the time he was able to get a new lease from Sinclair. The Sinclair Oil Co. has also, subsequent to the hearings, requested a reproduction of the tape which was played at the hearings and this has been made available to them. It is expected that the Sinclair Oil Co. may desire to appear before the subcommittee at impending hearings.

Testimony was received at the hearings relative to a new service station lease being put into effect by Standard Oil Co. of California, Western Operations, Inc., which is being studied closely by subcommittee staff. It was alleged at the hearings that this lease might be in violation of the Sherman Act, the Clayton Act, and the California Cartwright Act. Since the December 9–11 hearings, the subcommittee has received some additional information concerning this new lease. It is expected that the Standard Oil Co. of California may desire to appear before the subcommittee at the impending hearings.

Representative ROOSOVELT further announces that immediately following the hearings he dispatched a letter to the Honorable Robert A. Bicks, Acting Assistant Attorney General, Antitrust Division, Department of Justice, requesting that the subcommittee be brought up to date on actions taken by the Justice Department in relation to the matters developed both at previous hearings and at the December 9–11 hearings of Subcommittee No. 5. A reply was subsequently received from Mr. Bicks indicating that the Justice Department has initiated investigations and studies in several areas and situations, some of which were developed by the subcommittee hearings. Especially noted was the fact that an investigation of the pricing and distribution practices of the Esso Standard Oil Co. in the Virginia and West Virginia areas is being conducted by the Justice Department. There was much evidence presented at the December 9–11 hearings relating to Esso's current activity in converting lessee and commission dealers to "Service Station Manager" commission contracts. It is expected that the Esso Standard Oil Co. may desire to appear before Subcommittee No. 5 at the impending hearings.

It is also expected that other major oil companies would want to appear. The instances mentioned here are only a few of the many situations developed at the hearings involving major oil companies. Other situations are constantly being brought to the attention of the subcommittee.

Representative ROOSEVELT also stated: "There are indications that the industry is still haunted by the specter of retaliation. The witnesses who appeared at the hearings December 9–11 indicated that one of the biggest difficulties faced in getting the full story from the service station operators is the fear of retaliation by the major oil companies through their power to cancel leases or failure to renew them."

In discussing retaliation, Mr. ROOSEVELT pointed out that Mr. Leonard Weinstein, of Bridgeport, Conn., suggested at the hearings, and later by letter to the subcommittee, that it would be helpful if a letter from the subcommittee could be received to the effect that witnesses can and will be protected against retaliation. Such a letter was prepared and sent to an official of the Connecticut Automotive Wholesalers Association. Since that time the subcommittee has received affidavits from Mr. Weinstein setting out additional instances of alleged coercion.

Mr. ROOSEVELT also announced that the subcommittee has completed a full investigation of one instance involving a Shell Oil Co. "C" station manager who was involved in testimony developed at the December hearings. Shortly after the hearings this manager was given 24 hours termination notice and relieved of his duties. Mr. ROOSEVELT stated: "As a result of the investigation, I am fully satisfied that retaliation was not involved and that, in this specific instance, the exercise by the oil company of its supervisory prerogatives was not precipitated by the testimony of any witness appearing before the subcommittee at the December hearings."

Red Star Over Cuba

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. HAYS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include an article from Latin American Events, edited by Dr. Emilio Nunez Portuondo, former President of the Security Council of the United Nations.

I spoke out at the very beginning about the Communist-dominated Castro dictatorship and this is further documentation of the situation in Cuba today.

The article follows:

CUBA.—Significant events have occurred in Cuba during the past week. Mikoyan's visit to Havana on the pretext of opening the trade fair had previously been set up in New New York and Mexico City was an event of the particular importance for the Communist regime that has usurped power in the unfortunate island.

The day of Mikoyan's arrival, the general staff of the Communist government came out in full force to hail the Chief, Comrade Mikoyan. Castro and the Russian Deputy Premier exchanged warm embraces in view of TV and press cameras, to the surprise of those simpletons who still doubt that the bloodthirsty Cuban dictator is a Red.

The first words of Mikoyan contained a threat to the United States of America and at the same time, full backing for Castro's regime. He applauded agrarian reform, remarked that in Russia all private property had been taken without indemnification by the government—which has caused some foolish souls to finally realize that there is no hope for compensation from Castro's confiscations.

Later, Mikoyan placed a floral wreath decorated with the hammer and sickle at the base of the statue of Jose Marti, the apostle of Cuban independence who never sympathized with Marxist doctrine.

A group of university students, outraged at this profanation of Jose Marti, approached with a floral wreath enclosed in the Cuban flag. The police stopped them, broke a few heads, and destroyed flowers and flag.

The only thing left at the feet of Jose Marti was the banner of the hammer and sickle. The chief of the Havana police is a well-known Communist and ex-convict sentenced for trafficking in drugs, Almejeiras by name.

When the Russian Exposition was about to be opened, the police and soldiers serving as guards, the majority of them active Reds, fired their rifles into the air, to show their enthusiasm. Many persons were hurt in the resultant confusion and panic.

This time Fidel Castro did not say, as on other occasions, that the guns were fired by counterrevolutionaries or hateful Yankees.

In a Russian helicopter, Mikoyan and Castro toured various sites on the island, which are guarded by military forces. No reporter or photographer was permitted along on this secret trip.

To Cienaga de Zapata went only Mikoyan and the Castro brothers. This is the place where it is said that the Russians and a Hungarian engineer are planning the establishment of a guided missile base. They also visited the Sierra Maestra and the Isle of Pines, a place frequented by Russian submarines.

Puppet-President Dorticós offered Comrade Mikoyan a banquet in the grand style, in the Presidential Palace. One news agency reported that it was attended by the cream of Cuban society. Of course, the only cream gaining entrance to the Presidential Palace is the new cream, that is, Red comrades in high Government and party positions.

A funny incident occurred at the banquet, Mikoyan remarked to Castro that Cuban Foreign Affairs Minister Raul Roa was the uglist man he had ever seen. Roa, obviously emotionally overcome by his honor, humbly expressed his thanks and indebtedness to Deputy Premier Mikoyan. And Castro took a bath for the occasion, the first one in 42 days according to statistics.

Later, the commercial agreement brought by Mikoyan from Moscow was signed. As is well known the agreement contains secret clauses, providing escapes for Soviet Russia. Don't forget that this is a contract between a new satellite state and base headquarters.

Newsmen interviewed Mikoyan over TV. When imprudently asked about the infamous Hungarian repression, the Red Deputy Premier became huffy and replied that the question was loathsome, and he made no further reply. The hapless reporter who asked the question is now undoubtedly pondering his fate in a Havana jail, or is in exile.

The loan made does not consist of a grant of cash but rather of credit, for the purchase of Russian goods. Naturally, the prices will be fixed by the seller.

And whenever heavy machinery, planes or agricultural equipment is sold, they will be sent to Cuba accompanied by hundreds of Russian experts who will make their own extracurricular contribution to the communization of poor Cuba.

Of the million tons of sugar that Russia agrees to purchase annually from Cuba at the world market price, only two hundred thousand tons will be paid in dollars, much less than previously paid in dollars for former purchases. The remaining eight hundred thousand will be paid in Russian products, which will, of course, take the place of free-world exports, especially those from the United States.

Mikoyan reached Oslo, Norway, after departing Havana. There the difference between a free people such as the Norwegians and a people subjected by a Red dictatorship such as the Cuban, could clearly be seen.

Mikoyan, speaking before 800 Norwegian students tried to justify the barbaric Soviet oppression in Hungary. The students booed and hissed.

Cuban students reacted the same way, but were herded off to jail by the Red Cuban police.

Widening the Panama Canal

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of February 27, 1960:

WIDENING THE PANAMA CANAL

The time is coming when the United States must decide whether to widen the Panama Canal or leave it as it is.

While some people may not be aware of it, the canal is already too small for our largest warships—such as the supercarriers of the *Forrestal* class. If these carriers must be moved from the Atlantic to the Pacific, they must now make the long voyage around Cape Horn.

Officially, the Navy says that the new carriers are so much faster that they can make the long trip in less time than the older carriers. Moreover, the Navy maintains a complete fleet in each ocean, and adequate bases. Nevertheless, it may be desirable to widen the canal so that it can handle any modern warship.

From the commercial viewpoint, the canal is large enough to handle practically all oceangoing ships as of the moment. On the other hand, as ships get larger, the canal will not be able to handle them. There are several ships today which are too big for the canal already.

The latest estimate was that it would require over $2 billion to widen the Panama Canal, so that it could handle *Forrestal*-type carriers. Congress may not be in a mood to vote this sum of money at the moment, and chances appear against legislation to widen the canal. Another complication is the hostility toward U.S. occupation of the Panama Canal Zone in Panama. While there is little likelihood that the United States will grant Panama sovereignty in the Panama Canal Zone, recent demonstrations, and other protests incurred by the Communists, have made the U.S. posture there a delicate one.

In this connection it could be that an expenditure of several billion dollars might—several decades hence—be utilized by Panama, or another power, if we ever lose sovereignty in the 10-mile-wide Panama Canal Zone. This is a rather "iffy" danger, however, and the main question is whether security and commercial considerations justify the expenditure.

Eventually, we believe, the expenditure will be made, if only for peacetime purposes. However, action does not appear to be imminent, and chances are against any action at all in the immediate future. Uncle Sam, in this case, is estopped from action at the moment because of a pinch in finances—though, ironically, we could widen the canal and then some, with the money we are spending on foreign aid each year.

The Challenge Broadens

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Christian Science Monitor on February 26, 1960:

THE CHALLENGE BROADENS

It looks as if Mr. Eisenhower will return from his Latin-American visit to face a mounting challenge to his interpretation of American defense needs, his attitude on the budget, America's position on the global front, and whether he has sufficiently alerted the country to current dangers from Soviet power increases.

So long as criticism of administration defense policy and its effect on American international influence was mainly confined to Democratic Party leaders, Mr. Eisenhower could expect that most Americans would discount it in the context of a presidential election year. So long as it came most notably from "the spenders," it tended to answer itself. And even the most sincere testimony of military leaders—which in any case reflected wide differences of opinion among them—has a certain ex parte ring for the civilian population.

But as voices such as those of Robert A. Lovett and Robert C. Sprague, both Republicans, both bankers, and both with intimate knowledge of the national effort to build security, express differences with the President in this vital field, the White House is under new compulsion to state its own case more effectively. These men have now testified before a congressional committee studying policymaking.

Another impressive witness questioning administration policy is Dr. James P. Baxter, president of Williams College.

That three such men find themselves differing publicly with the President proves no more than that there is room to differ among men of relatively conservative backgrounds. Such statements indicate the existence of influential Republican opinion which has been for some time at variance with that of the President.

When asked by a committee member what should be done to alert the country to the security problem, Mr. Sprague said: "I think there is one man in the United States who can do this effectively and that is the President * * * I believe * * * the danger is more serious than the President has expressed."

Mr. Lovett had already testified that he felt the United States is "doing less than its best" and that budgetary considerations are playing an increasing part in decisions."

But all this testimony, including that of Mr. Baxter, was dealing with a much broader field than that of an alleged "missile gap" or even military defense as a whole. Mr. Baxter, for example, said: "Nobody hates inflation more than college presidents. * * * But there are things that the American people spend a lot of money on that they could well do without, or with less of, in exchange for security."

One of the major questions about presidential leadership to which the White House should direct more attention thus emerges. It is the question whether the Government is doing all it should to make the American people as aware of the challenges facing them as they are, say, of the availability of swimming pools and motorboats.

How much of this leadership should the White House be expected to provide; how much should come from Congress? Is the administration satisfied with the national effort?

There is a widespread—possibly mistaken—impression that it is. But if so the satisfaction does not include all Republicans, let alone election-minded Democrats. The emergence of this fact is something the President himself will have to take more serious account of in the weeks and months ahead.

Is the SAC To Be Our Maginot Line?

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Somersworth Free Press, one of the leading weekly newspapers in the State of New Hampshire, published and edited by Mr. John J. Ballentine of Somersworth, N.H., on February 25, 1960,

entitled "Is the SAC To Be Our Maginot Line?"

IS THE SAC TO BE OUR MAGINOT LINE?

The chamber of commerce delegation from Somersworth that spent several days in Washington last week arrived in the Nation's Capital in the very midst of the debates on defense. It seemed that everywhere, whether it was in formal committee hearings or in informal discussion among congressional leaders and their staffs, the uppermost questions of the hour centered around whether or not this country's military defense is as adequate to meet the Russian threat as President Eisenhower has been assuring it is.

And the very best opinion we got—and it came from Republicans as well as Democrats—was that the United States is woefully lacking in the type of defense that is needed to cope with the Soviet Union's military growth.

Our talks took us to experts in the Pentagon, to researchists in the Library of Congress, to the Members of our own congressional delegation. We came up with the conclusion that the present emphasis by this country on a defense system which centers around the Strategic Air Command (SAC) system is a weak system and one which is being fast outdated by the Russian's advances in space and missiles.

The United States, point out these people who are closest to the controversy, has placed its future security largely in the effectiveness of the nuclear-carrying bombers that are located at Pease Air Base in Portsmouth and at some 50 similar bases in this country. The location of all of these permanent bases is known to the Soviet Union. And the Soviets have nearly reached the long-range missile capacity to blast them to pieces. These are the missiles which Russia has provde can be fired over a 3,000 mile range with an accuracy that is close to 1.8 miles. Their supersonic speed and range capacities make the conventional bomber such as the B–47 or B–50 obsolete.

Our conversations in Washington with those people whose judgments is sound is that the United States has in its SAC defense system a second maginot line. What is needed is a complete revision of this country defensive and offensive military capacities to cope with the very real threat that is posed by a nation that has progressed far beyond us into the missile and space age.

Mountain Sheep Project

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. ULLMAN. Mr. Speaker, on March 21, the Federal Power Commission will begin hearings on an application by a private power combine to build a dam at Mountain Sheep. This is another stage in the developing controversy over the middle Snake River, a controversy which is recognized by many people as bearing similarities to the historic battle over full development of Hells Canyon on the same river. I would like to enter into the RECORD the following editorial on this matter from the Record-Courier in my hometown of Baker:

[From the Record-Courier, Feb. 4, 1960]

MOUNTAIN SHEEP PROJECT

The State currently has under advisement the matter of issuing a permit for the Mountain Sheep Dam to a combine of private power companies at a site just above the mouth of Salmon River on the Snake River.

A similar decision rests with the people, for after all in recent years the resource development has come to be a matter of dumping comprehensive programs overboard and making the decisions upon a political basis.

As in the case of Hells Canyon, the Mountain Sheep power combine originally applied for lesser development—two lower dams with negative storage in comparison to regional needs. They were, however, turned down on this application, after it fell to a small group of persons fighting for full development of the water resource to battle the big, well-financed utility companies in the Federal power hearings on the original Mountain Sheep-Pleasant Valley two-dam plan. The FPC in the Hells Canyon case agreed with the resource development people that a high dam would be the better project for the public but in spite of this granted the Ipco three-dam license, and said that the public could get its storage and full development elsewhere to make up for the Hells Canyon waste.

After this ill-fated Hells Canyon decision the FPC could hardly do the same as Mountain Sheep-Pleasant Valley and so was virtually compelled, politically as well as resourcewise, to deny the license. Instead, it said a high dam was necessary on the Snake River.

At this juncture, facing the prospect of public control of upstream storage, the companies immediately agreed with the FPC and said that in spite of their effort to put over the lesser development they would be glad to build a higher dam—but not the best one.

It is at this point the companies (PPL, PGE, and WWP) applied for license to build the 690-foot Mountain Sheep Dam, the object of the present applications. It would block the higher Nez Perce project located below Salmon River and would also block a public dam proposed by both the Corps of Engineers and the Bureau of Reclamation at the Mountain Sheep site. It would also effectively block the fish runs on the main Snake River. A companion project, the Lower Canyon dam planned for the Salmon River and subject likewise to Federal license, could later block the fish runs of the Salmon River.

The companies in their big argument have enlisted many sportsmen, however, with the propaganda that the Mountain Sheep Dam would defeat Nez Perce Dam, a public site delayed for the future when the fish problem is solved. Sportsmen generally have felt that Nez Perce would wipe out fish runs on the Salmon River even though under current thinking it would not be built until it would be assured of fish solutions. Sportsmen also have been led to believe power companies would leave the Salmon River and its Lower Canyon site alone, a promise hardly borne out by the history of greed.

The tricompany Mountain Sheep Dam would block the Imnaha River. It is vaguely proposed that a $14 million fish canal and passage at the dam be built to convey the 6,000 steelhead and 9,000 salmon annually up the Imnaha. The canal would be built a distance of 17 miles in solid rock. (Figure the annual interest cost on this facility and you will see why on a per-fish basis this writer has contended they do not have a solution to the fish problem at this time.) The dam as yet has no solution to the fish problem on the main Snake.

Residents of Wallowa County favor the Mountain Sheep site as a promise of some construction prosperity, and the advantages of a lake in the canyon reaching back to the Hells Canyon site. The lack of any prosperity in these parts from the big Ipco projects, however, would seem to cancel out this hope, and there is no way of knowing what tremendous recreation benefits are being missed for not having the high Hells Canyon or ultimately the high Nez Perce Dam.

At any rate this is right in the middle of another big resource controversy. There is no one on the side of the public defending the full development of the water resource. The question is whether some of the original comprehensive plans are surviving through the administration's giveaway program sufficiently that in 1960 the people will realize how deficient single-purpose, private, incomplete development really is. Or possibly the development can be held off long enough till a new administration will again be willing to say "no" to wasteful exploitation.

Nothing in this present hearing has come to the attention of this writer to convince him that a private, single-purpose power company is competent to develop the multipurpose public resource in the public interest, waterwise, fishwise, storagewise, recreationwise or in any respect. At Mountain Sheep it is a stop-public development scheme, a desperate effort to never let the public get control of any major upstream storage site. It unfortunately, is a demonstration that the public is not powerful enough to stop private destruction of major resource values. No amount of pleading that at present there are no solutions to the fish problem has deterred the companies from rushing the blockades in the river.

By two yardsticks we are dubious about the monopoly dam scheme at Mountain Sheep First, it obviously is not the fullest development. Second, it gives no assurances that public values will be respected at a multipurpose public site.

History Shows Purpose of Politics Is To Rise to New Challenges

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. EVINS. Mr. Speaker, in his newsletter for March 3, our able colleague, the gentleman from Texas [Mr. PATMAN] makes some most thought-provoking comments which go to the roots of the central problem facing our Nation today. Although these comments are addressed specifically to the Democratic Party, they point so cogently and sharply to the decision which we as a Nation must make soon if we are to continue our American tradition of greatness that I commend it to the attention of all thoughtful citizens regardless of party, and under unanimous consent I include this portion of our colleague's newsletter in the Appendix of the RECORD.

The newsletter follows:

WRIGHT PATMAN'S 1,280TH WEEKLY LETTER, FOR RELEASE MARCH 3, 1960, FIRST CONGRESSIONAL DISTRICT OF TEXAS, "HEART OF THE GULF SOUTHWEST"

PURPOSE OF POLITICS

"Political organization is not an end in itself but merely the framework in which hu-

man purposes can be fulfilled"—so writes, this week, C. Northcote Parkinson, a political scientist best known for his Parkinson's law.

The human purposes of political organization badly need redefining in relation to the problems of our times. The Democratic candidate who correctly perceives these purposes and states them in a clear and certain way—if there be such a candidate—will, I think, be the next President. The wide belief among politicians that the Republican's claim to peace and prosperity is unbeatable seems to me to misread history and to misread the minds of most of us today. Peace and prosperity has been amply defined: It means that all is well, that there are no threats to our survival, and that there are no problems at home except in the realm of Federal finance.

The era has long since passed when we could entertain ourselves with the notion that the Russians' productive efforts were sure to produce only a bungling comedy of errors. The era of hysteria has passed, when, after the Russians exploded the atom bomb, we imagined that Communists and spies were overrunning our Government and perhaps our churches. More recent events—such as the Russians' demonstrated superiority in missiles, space exploration, and perhaps scientific training—have led to an uneasy suspicion that all is not well; that the foremost challenge of our times is not, as the administration thinks, preserving the value of the dollar and balancing the Federal budget. Considered appraisals such as that of Mr. Allen Dulles suggesting that the Russian economy is expanding at a rate almost three times as fast as ours, while we pursue, with an almost religious zeal, tight-money and high-interest policies that both stunt our economic growth and retard our educational system, are far from comforting.

One of the most influential ideas of our times, whether we know its source or not, was expressed several years ago by Arnold Toynbee in his efforts to advance a theory of history. This is the idea that nations have either flourished or declined by the responses they have made to new challenges. Some have responded to new challenges and risen to new heights; others have failed to respond and have declined or disappeared. Peace and prosperity as we know it, does not meet the human purpose of our times.

Whether there will be a candidate who can perceive and state the human purposes the Democratic Party is to serve, no one can say. In recent years there has been little agreement among congressional Democrats as to what our purposes are. In the two last elections increasing majorities of Democrats were sent to Congress but, except for those from the farm areas, few have seemed to know why. About half have seemed to think the people are deeply disturbed and dissatisfied with the administration's handling of our Nation's affairs; the other half have seemed to think they were elected because "we have supported Ike's programs more than the Republicans." This is not to say that the Democrats are unworthy; it is only to say that the times cry for leadership.

We Build a School

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an address which I delivered at the dedication of the Narragansett Junior High School, Narragansett, R.I., on December 20, 1959:

WE BUILD A SCHOOL

(Address by JOHN E. FOGARTY)

It is always a very great joy and a privilege to assist in the dedication of a school. It is a particular pleasure to participate in such a dedication in a community such as Narragansett which reflects so clearly your dedication to the best interests of your young people, your faith in the future growth and well-being of the community, your understanding of the importance of education in a democracy, and your determination to meet the challenge of a new age.

We live in a State which has been closely identified with educational and cultural development since the earliest colonial times. We have a proud heritage from our ancestors who labored to create the founadtion of understanding on which our way of life is built. We are an optimistic people with faith and determination that we can meet the future with courage and integrity, and this fine new school which we dedicate today emphasizes those characteristics which keep democracy safe and strong.

These are challenging and crucial days in education because so much is happening. Within our own lifetime man has entered the age of atomic energy and space. He can transmit events with the velocity of light and travel faster than the speed of sound. His achievements in science and technology are spectacularly increasing, with the result that every other day seems to bring a new and breathtaking headline. This is having a profound effect upon public thinking in regard to education, upon public concern that the education our children receive shall be adequate to the needs of our times.

Because of my own great interest in educational progress and my particular good fortune to serve the Government at a time when that interest is shared to a high degree by the people of Rhode Island, it seems appropriate today to say a few words about the Federal-State relationship which exists between the schools and the National Government. It is a unique and satisfying relationship and one which has enabled us to strengthen our democracy and hold fast to the ideals of our forebears.

America has a proud history of local control and support of education. That concept was shaped and patterned by our early settlers and it is a pattern in which Americans believe wholeheartedly. We recognize that the schools belong to the people and that their strength is derived from the people. If the schools are to serve the varied interests and needs of the people, the people directly concerned must determine their procedures and their policies. We do not believe in Federal control of education but insofar as the purpose of education in a democracy is to prepare youth for alert and competent citizenship, we do believe in Federal responsibility.

Believing thus, and facing the gravest emergencies of our times, a year ago the Congress passed the National Defense Education Act, a law which has been characterized by many people as one of the three most imporant milestones in the history of Federal action to strengthen our schools. It was my privilege to have been in the chair during the debate on this important legislation, and I was highly gratified, as were other friends of education, when the bill was enacted into law. It touches every level of education, public and private, from the elementary grades through the graduate schools, and is a major breakthrough in the effort to see that every young person, from the day he first enters school, should have an opportunity to develop his gifts to the fullest extent. It is the recognition that in a free society the individual is the first line of defense.

Under the forward-looking guidance of our State department of education and the ability and leadership of Commissioner Walsh, Rhode Island is participating in considerable measure in the benefits made possible by the National Defense Education Act.

Our young people are availing themselves of the student loan program; our schools have initiated a plan for strengthening science, mathematics, and foreign language. Our area vocational program, which is designed to provide people trained in critical areas of scientific development, is being accelerated. Rhode Island is one of the States which has long believed that wide guidance is essential to the educative process, and the Department of Education is substantially extending the testing program now being conducted. The tangible results we can expect from this effort in identifying students with outstanding ability should be truly impressive. In thinking about the results, however, we should remember that this effort is designed not merely to identify and enable the most gifted to make the most of their gifts. It is to help all children, regardless of the degree or extent of their talents, to take courses best suited to their ability.

Naturally, I am delighted and proud of the example set by the people of Rhode Island in their understanding and acceptance of this partnership with the Federal Government.

But regardless of Federal enactments or of State supervision, education must remain a local responsibility. This beautiful building which we are dedicating today is your building, built for your young people and, under the leadership of your board of education, to be used so that each girl and boy may find herein satisfaction and pleasure and may be led to the fulfillment of his or her greatest capacities.

The school curriculum and how it is taught are matters to be decided by your State Department, Commissioner Walsh, your local board, your superintendent and the citizens working with their chosen representatives. Yet it is rightly a concern of great importance to all of us that the school curriculum shall encompass the teaching of the fundamental skills and understandings which have made America strong and vigorous. We must have thorough learning of the three R's. We must delve more deeply into geography and history. We must increase our understanding of other peoples and nations.

We must reiterate and reemphasize, too, the old-fashioned virtues which have made America great but which are sometimes lost sight of in a frustrated and explosive world.

We must teach new competencies to give our children the tools with which they may hew out a path so clear that they shall not stumble or fall; we must teach truth, for only in the understanding of truth can man hold fast his dignity and his freedom; we must teach friendship, which is understanding and fair play and loyalty and honesty and integrity—for these are the binding substances of a free world. We must try to bring to every child the vision of freedom, the glory of democracy and the joy of an abiding faith.

Of these things you are well aware and you may be very proud of the record you have established, of the schools you have maintained, and of the leadership which holds them high.

I said that the schools belong to the people. And yet, in a very real sense, the schools belong neither to the people, the taxpayers, the teachers nor any other group, for all of us are only trustees and we hold the schools in trust for the benefit of our country, our community, our children and the generations to come. No school can ever be much better than the community wants it

to be, for it represents our strivings, our sacrifices, our dreams and our visions.

You have built a school. But this, too, you have builded:

Not so much a schoolhouse, as a fortress, a haven, a temple, a dream, a hope. Within these walls we protect our greatest treasures and guard our most important resources.

It is a privilege and an honor to dedicate this school as a living memorial to the past, to the men and women who lived, struggled and died that their sons and daughters might grow stronger and wiser than they; to dedicate this school as a living promise to the future, that those who follow us may be wiser and stronger and more understanding than are we.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. ALGER. Mr. Speaker, I include the following newsletter of February 27, 1960:

WASHINTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

The water pollution bill to double the present Federal spending brought both the year's first Presidential veto and attempt by the Democrat leadership to override it. The failed by 22 votes to muster the necessary two-thirds of those present and voting—the vote was 249 (234 Democrats to 15 Republicans) to 157 (130 Republicans to 27 Democrats). Three other Texans joined me in support of the President's position. The President, in denying the added spending beyond the present $50 million per year, recommended: (1) A national conference for the study of water pollution; (2) increased Federal authority to enforce provisions to prevent water pollution; (3) modest Federal funds for administrative purposes; and (4) research and technical assistance by Federal Government.

The President's veto message pointed out the essentially local nature of sewage treatment plant construction, warning that added Federal money would tempt municipalities to delay essential water pollution abatement efforts while they waited for Federal funds.

Arguments for doubling Federal expenditures: (1) More Federal funds will not delay but stimulate local construction; (2) foreign aid provides money to help other nations build sewage treatment plants, among other projects, so why not do more at home with Federal money.

Arguments against doubling present Federal expenditures: (1) This is $70 million yearly beyond the present budget; many other budget-busting spending bills are awaiting attention, and all adds up to the danger of more inflation; (2) local efforts now are providing the necessary water pollution abatement without more Federal money. For my part, I heartily agree with the President stressing the local nature of this problem and shall do my part, both to support sound Federal efforts to preserve local and State initiative and not to cheapen the dollar by inflationary Federal spending. Meanwhile, the 1956 program of expenditures goes right on despite the defeat of this bill. The double expenditure is the same amount requested by the bill's proponents 4 years ago when I was on the Public Works Committee.

In Congress, continued effort by a Member or Members to increase spending on any program generally bears fruit.

Secretary of Agriculture Ezra Taft Benson, as guest on this week's television program for Dallas (10:30 a.m. Sunday, WFAA-TV) stressed his belief in and effort toward freeing the farmer from Federal subsidy, regulation and control. He traced the wartime nature of our farm program and pointed out that only 5 crops of 250 are in trouble, and they (wheat, cotton, peanuts, rice, and tobacco) are the ones supported by Federal regulation and money; thus only a portion of our farmers are affected. (Therefore, only a percentage of the higher prices for groceries result from Government subsidy.) Taking wheat as an example (see Newsletter, Feb. 13), $1,000 per minute storage cost alone) Mr Benson recommends two actions: (1) Free farmers from Government regulation; (2) eliminate surpluses on hand by reducing supports. After a lifetime in agriculture, Secretary Benson displays great knowledge of the farmer and his needs. His knowledge is equalled by his courage. He agreed that if Congress does not act (and only Congress makes the law, not the administration of the President), the people may force the Congress to take action, as was done last year in the forced passage of a labor bill (over the objections of the House Democratic leadership).

The defense issue which stirs up mighty debates at appropriation time (more so in an election year) might be on the wane as a political football. As the facts come to the surface, forced out despite security precautions (not to broadcast our military plans and abilities), the overall strength of the United States is becoming better understood. Undestandably, the same vocal members of Congress who now are most critical are the same ones who most loudly demanded more Federal action and spending as a cure-all for recession. That was the political football then. As one member put it this week, "The perennial political pessimists who are selling America short on defense are just as wrong as they were 2 years ago when they forecast a depression for the country, willing to sell America short to further their own political careers." Fortunately, there are many Members of Congress left who do not underestimate the intelligence of our people, and have a respect for solving our problems by truth and the fact—not demagoguery.

Parkinson's two laws concerning what ails bureaucratic government are worth a chuckle, even as they spell out the truth. Law No. 1: "The more people there are on a job, the sooner it doesn't get done and, therefore, more people are always hired to help not complete it." Said another way, "Work expands so as to fill the time available for its completion" (ad infinitum). Law No. 2 (just out): "Expenditure rises to meet income." This means any anticipated budget surplus will never materialize if anticipated in time by the spenders to provide necessary expenditures. On the second point, an editorial suggests, "Expenditures rise without regard to income." This most certainly we have demonstrated over the last 25 years in Congress.

Lithuania, a Land in Bondage

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. BOLAND. Mr. Speaker, may I call to the attention of my colleagues a splendid editorial commemorating Lithuanian Independence Day of February 16, and appearing in the Springfield Daily News of February 17:

LITHUANIA, A LAND IN BONDAGE

In his last words before his execution, one of the most famous of the Irish patriots of this century commended the Irish people for their faculty of retaining through centuries of misery the remembrance of lost liberty.

However, the Irish are not alone in that experience. Through the centuries, there have been more slaves than freemen, more subjects than citizens, more in chains than at liberty.

There is no greater joy than freedom won, but there is no greater tragedy than freedom lost. Liberty sharpens the appetite for liberty, and a people who have won freedom and then have it taken from them hunger for it more passionately even than those who have never tasted it, and do not know its sweetness.

Today should begin Lithuania's 43d year of freedom. At the end of World War I, that small Baltic land proclaimed its independence, and it was recognized by most of the world's powers. However, in 1940, Russian troops occupied Lithuania and the once-indepndent state became the Lithuanian Soviet Socialist Republic, which is not Lithuanian, nor socialistic, nor a republic. It is Soviet.

Nowhere is the Iron Curtain tighter than in Lithuania. Behind that black shield, Russia is destroying a nation, and it will not permit foreign diplomats or newspapermen to view the scene of the crime.

Some 3 million people, if that many survive, have tasted freedom and are now in bondage. There can be no celebration in Lithuania, nor in this country where hundreds of thousands of Lithuanians have found the freedom denied their brothers in the homeland.

Lenten Services at the Lutheran Church of the Reformation

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. REES of Kansas. Mr. Speaker, I am including herewith a copy of a letter from Rev. Lawrence D. Folkemer, pastor of the Lutheran Church of the Reformation, 212 East Capitol Street, Washington, D.C. We are sure Members of the House and Senate will be glad to accept the cordial invitation of the Lutheran Church to attend Lenten services. The Church of the Reformation is located only a few blocks east of the Capitol.

The letter follows:

FEBRUARY 23, 1960.

To Members of the Congress and their Staff.

DEAR FRIENDS: For many years, noonday Lenten services have been conducted at the Church of the Reformation for the community on Capitol Hill. These services have been a source of inspiration for thousands of men and women who have desired a short period of each day for meditation, prayer, and rest. Lent has historically given Christians an opportunity to deepen their spiritual life and to face their daily tasks with renewed faith and devotion.

The services are interdenominational in nature. Guest clergymen from all denomi-

nations are invited to speak. Lent is a fitting season for people of all churches to worship their common Lord. Very often Members of the Congress attend together and worship with those of their staff.

It is our special hope that our Congressmen will be able to attend the first service on Ash Wednesday, March 2, from 12:05 to 12:30, the first day of the sacred Lenten season. Special prayers will be offered in behalf of our President and our Nation's leaders in these trying times.

May we cordially invite you to attend and make available this invitation also to the members of your staff.

Sincerely yours,

LAWRENCE D. FOLKEMER,
Pastor.

The Advertising Gold Medal Award for 1959

EXTENSION OF REMARKS
OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD the following remarks which were delivered on February 18, 1960, by Dr. Frank Stanton, president of the Columbia Broadcasting System, during ceremonies at which he was presented the Printer's Ink Gold Medal Award for 1959. Dr. Stanton has placed in perspective the basic questions involved in Government regulation of broadcasting, and has done so clearly, succinctly, and persuasively:

I am most grateful for this award—the more so because it comes at a time when broadcasting is the object of less than universal admiration. Selecting me for a place in the long line of recipients of the gold medal awards falls, I am afraid, somewhat short of wisdom. But it certainly speaks well for the jury's courage.

The fact is that anyone in broadcasting is rather easily moved by honors these days. We have become somewhat more expert in the acceptance and usages of censure. This expertise we acquired the had way—by direct exposure. I have even begun to take an interest—thus far academic, for the most part—in epithets. Let me quote you some:

"Base, servile, venal polluted the foundations of society—the most ignorant, mercenary, and vulgar automatons that ever were moved by the continually rusting wires of sordid mercantile avarice."

However familiar these denunciations may seem to you, they were not taken from a column of television criticism, a seminar on mass communications, or a Washington hearing. They are not even a concomitant of the age of advertising. They were used on March 4, 1799, to describe the state of the press in the United States. And they were used, not by an outsider, but by John Ward Fenno, editor of the leading newspaper of the day, and presumably an expert.

I bring all this up nearly two centuries afterwards for, I think, very good reason. I do not do it necessarily to remind you that the older media have also had their troubles—reassuring as the contemplation of that fact might be to me at the moment. The real point is that the editor of an outstanding newspaper made this scathing indictment of his own field a year after the United States had undertaken, in the Sedition Act of 1798, the only statutory venture in our history aimed at the direct control of a medium of expression. Nor was Fenno alone in his opinion. Another editor the same year accused the press of "mawkishness, dreariness, and gross folly."

After four editors were jailed under the Sedition Act for criticizing the Government, the law was abandoned—killed off by public opinion. But the notion of getting a more responsible medium of expression by legislative action has persisted throughout our history. Every time that any vehicle of expression, any medium of communication, any institution of culture or education has widespread public attention concentrated on a weakness or a failure or even a dilemma, there are always demands that "there ought to be a law."

The road to utopia by Government regulation looks invitingly easy. And it is easy.

The easiest way for us in television to duck responsibility for the tough business of planning balanced programing is to default and say to the Government, "You tell us what to do, and we'll do it."

The easiest way is to let some Government agency fix the percentage of the day's programing that will be hard news, the percentage that will be serious drama, the percentage that will be classical music and the percentage that will be westerns. The easiest way is to sidetrack competition altogether—every network doing exactly what the Government prescribes and not one risky whit more. The easiest way is to dump into the laps of Government the most challenging problem of television—the achievement of that elusive, arduous, perplexing objective of a democracy: meeting the will of the majority and at the same time accommodating the rights and interests of minorities.

Government prescription is the easiest way. But it's also the irresponsible way. It promises imaginary short-term gains at the price of real long-term loss. It is a way full of delusions, traps, and unending enmeshments. It is based on fallacies almost inevitable in any attempt to shortcut normal growth in any area of expression. And in the end it leads, not to utopia, but to weakness, timidity, uniformity, and stagnation.

Sometimes from surprising quarters usually dedicated to freedom and ordinarily keenly sensitive to any Government intrusion into expression in America, the argument is advanced that, because there is a technical limit on the number of television channels available, the Government should be empowered to regulate what is broadcast on those channels. This is an unrealistic as well as a shortsighted view. The Government is no more competent to dictate the contents of a medium that has technical limitations on the number of its outlets than it is to dictate to those that have economic limitations.

Once the Government tells three television stations in a city what they must broadcast, how long does anybody suppose it would be before the Government also tells the only newspaper in town what it must print? Most metropolitan centers in the United States have more competing television stations than competing mass circulation dailies. Indeed, today there are only 12 metropolitan centers with three or more dailies; there are four times that many cities with three or more television stations. It would be as logical to seek constitutional reforms to impose Government standards on newspapers because their number is limited by economics, as to regulate programing on television stations because their number is limited by the spectrum.

It is not at all helping that those who would regulate television programing protest that they would concern themselves only with cultural and entertainment material and leave the news alone. What sort of arbitrary definition—and whose?—is to determine what in informational, what is cultural, and what is entertaining? Last night the "Circle Theater" presented a dramatic exposition of the city of Pittsburgh's noteworthy method of dealing with juvenile delinquency. Was this primarily entertainment? Was it sociology? Or was it news? Not only would such distinctions be impossibly difficult, they are very apt to be contradictory in some cases and almost wholly overlapping in others.

No thoughtful observer wants to restrict the application of the tenets of a free press to what some agency in Washington defines as news. If the principle is once established that the Government has the right to supervise everything else in communications or expression, I don't think it would make any difference whether we got what was clinically tested as news or not. To have freedom merely to report events in your own way, to cover those you want to, and to omit others, to edit—essential as such freedom is—is only the beginning of a free press. For isolated events are merely fragments of experience reflecting the national character. The formative powers are rooted deep in other areas of expression—a fact that Prof. William Ernest Hocking established, in fine and perceptive phrasing, in his "Freedom of the Press: A Framework of Principle":

"Neither the value nor the duty of expression is limited to its more purposeful aspects. Speech and press may be trivial, casual, emotional, amusing, imaginative, speculative, whimsical, foolish; all utterance serves a social end—to report to fellow beings mutual presence and interest, the play of mood, the vagaries of taste, the gropings for principle, the barometric flux of belief and disbelief, hope and fear, love and hate, and thus to shape attitudes * * * there is a common duty to protect the whole range of this freedom, as a right of social existence."

Advocates of Government control of television programing have also spoken in such gentle terms as "guidelines." We ought not to be misled by these. I would be as repelled by a newspaper "guided" by Government as one controlled by it. If the guidance has no element of force in it, it would have no significance. If it does have force, it is merely a euphemism for Government control. There is no such thing as "a little" Government control. Any control at all is repugnant to all our values and a damper on creativity and the stimulation of freely competing expression. A society that sees one more Indian bite the dust on television is far safer than a society that sees one iota of its freedom of expression given up to its government.

I am familiar with the hypothesis that we could evolve some kind of responsible commission, made up of eminent altruistic citizens appointed by the Government to review and report on television periodically. But unless they had punitive powers, what would it mean? Television is already reviewed regularly by some of the most articulate people in the American press. Great and powerful publications, moreover, frequently editorialize on what we have done that we ought not to have done and what we have left undone that we ought to have done. They examine not only the substance of our programing but also our policies, our trends, our economics, our personnel, and even our private deliberations. There is nothing left for a commission to review.

Suppose, on the other hand, the hypothetical commission is given real teeth to enforce its standards. Then we are in the dilemma that dependence on benevolent despots always involves. There is no way to tell whether they will remain benevolent or whether their successors will be benevolent at all. Walter Lippmann spelled this out very plainly in "The Good Society," in his

discussion of the flaw in "planning" social improvements:

"Not only is it impossible for the people to control the plan, but what is more, the planners must control the people. * * * By a kind of tragic irony, the search for security and a rational society, if it seeks salvation through political authority, ends in the most irrational form of government imaginable—in the dictatorship of casual oligarchs. * * * The reformers who are staking their hopes on good despots, because they are so eager to plan the future, leave unplanned that on which all their hopes depend: The selection of the despots who are to make society so rational and so secure has to be left to the insecurity of irrational chance."

This whole theory of benevolent censorship—anticipatory or by way of review—is mischievous doctrine. There is no conceivable way that it can be limited in degree or in nature. Control of what goes out over the airwaves is no more justified than control of what is distributed by the postal system. The second-class mailing privilege—as vital to many publications as the airwaves to broadcasters—should not be withheld from any magazine because it will not submit its editorial contents to review by a commission. Newspapers should not be required to yield control of editorials and features to a commission because economic facts preclude an unlimited number of papers in the community.

Regulation is just the wrong, the precipitous, the penny-wise, pound-foolish way of seeking improvement.

The truth of the matter is that the road to utopia is hard and rocky and uncharted. No one is satisfied with television when he considers the unlimited potentialities of the medium. Each of us looks at it from the little window framed by his own values and concerns—and knows that it could be better. But the thoughtful man knows also that improvement will come hard and slow after many a false start, after many years of trial and error, and, above all, by facing realities rather than attempting to evade them.

I cannot share the defeatist view that, if the Government does not take the improvement of television programing under its control, there will be no improvement at all. There is nothing in our national experience to support this view. The fact of the matter is that any worthwhile improvement must have a deeper and sounder foundation than Government policing. It seems to me that such a foundation consists in the stake that all of us in this country have in a vigorous, freely competing, unrestricted television medium.

At this particular moment in history, all of us—whatever our individual interests—have one overriding common interest: that in this rapidly moving age of conflict, the democratic process does not go down—a lumbering anachronism, the victim of totalitarian swiftness and directness. In this decisive battle, the immediacy, the speed, and the impact of television can be decisive factors in informing the American people during crises and creating a prompt feedback of the sense and purpose of the people to the Government. It is both a lesson of history and ordinary commonsense that this function cannot be carried out except in an atmosphere of freedom.

All of us here also have a special stake in a free television because we are all devoted to a free and expanding economy. The stimulative effect of television on that economy has been tremendous. None of us can afford to let it stagnate and fall short of its highest capacities; if we do, its strength as a medium will so deteriorate that it won't be worth saving.

All of us recognize that, because of the unique characteristics of the medium and the speed of its growth, the problems facing television are complex and, in some respects, unprecedented. The major part of the burden in solving these problems must rest with the broadcaster. We have fully acknowledged this responsibility and intend to discharge it. But we cannot, and should not, withdraw from the world of which we are a part and make command decisions. A trust in a democratic society is given, not in a context of isolated authority, but on the assumption that one will have constant reference to the values and objectives of his fellow citizens.

We may be slow in perceiving these. We may be in need of a better, surer way of determining them. But we are aware of them, and we mean to respect them. For television will begin to reach toward its utopia only when it has full confidence that it is realizing in one way or another the values and objectives of all the people. This means not just always catering to the majority, but also taking into account and respecting intellectual and esthetic minorities.

The quest for utopia always falls short of achievement. But it is the quest itself that is important—not the illusion that we will ever achieve perfection. I hope that in our quest we will not be lured into shortcuts that turn out to be dead ends or seek remedies more devastating than the ills they are supposed to cure. I am for undertaking the quest the hard way, the responsible way, the enduring way.

If I may take away one meaning from this highly flattering occasion, it is the conviction that I am not alone.

South American Swing

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. ALGER. Mr. Speaker, the world continues to shrink in size as our giant jet airliners link nations and people together. People-to-people contact of the finest kind results from such quick air transportation. Braniff plays a part in binding closely the nations of the Western Hemisphere. A recent demonstration of this linkage by airline was the preinaugural survey of Braniff Airways' jet transport service to Lima, Rio, Sao Paulo, and Buenos Aires. The following account from the February 29, 1960, issue of Aviation Week, by Robert Hotz, points out the economic and diplomatic possibilities in this increased transportation service:

[From Aviation Week, Feb. 29, 1960]

SOUTH AMERICAN SWING

(By Robert Hotz)

We have just returned from a 15,000-mile swing through South American summer accomplished in less than a day and a half total flying time that provided a remarkable demonstration of the impact jet transports will have on that part of the world and of the effectiveness of the type of person-to-person diplomacy that President Eisenhower so often talks about. The occasion was a preinaugural survey of Braniff Airways' jet transport service to Lima, Rio, Sao Paulo, and Buenos Aires to begin regular operation in April. Preinaugural junkets are a routine hallmark of the airline business, but every once in a while there is a fortunate combination of circumstances that produces an experience that goes far beyond the routine junket. This Braniff expedition led by its dapper president, Charles E. Beard, was one of those notable exceptions.

First, the aircraft was something out of the ordinary. We have flown in both the Boeing 707–120 on domestic service and the 707–320 on international runs, but the 707–227 selected by Braniff is a far different beast. It is a hotrod version that retains the smaller airframe and lower gross weight of the domestic 120 but is powered by the larger Pratt & Whitney J75 turbojets of the intercontinental 320. Braniff picked this version primarily to be able to use existing airports along its route without any runway additions, but it also provides a significant speed advantage with its 626 miles per hour maximum cruise on domestic routes plus a long-range stretch of 3,500 miles on the international routes. The takeoff and climb performance of the 707–227 at high gross weights was truly startling, particularly on the blistering better than 100° F. temperatures on the runways at Rio and Asunción, and the thrust reversers left ample concrete remaining after landings before taxi turnoffs.

CONTRACTING FLIGHT TIME

As H. M. "Jack" Horner, chairman of United Aircraft Corp. whose Pratt & Whitney Aircraft Division makes the J–75 remarked: "Isn't it fun to fly on an overpowered aircraft for a change?" Braniff pilots, Ted Raines and Jack Thomas, demonstrated the long-range cruise techniques at 560 miles per hour airspeed with nonstop legs of 3,276 miles from Houston to Lima in 6 hours 20 minutes and Asunción to Panama (3,319 miles) in 6 hours 26 minutes. The entire 15,128-mile circuit, plus five local demonstration flights carrying nearly 500 South Americans, was made, in the words of Ted Raines, "without one iota of mechanical trouble."

It is obvious from the way they shrink South America's great distances in relative comfort, that the Braniff jets and those of other airlines and manufacturers will play a significant role in binding the cultural and commercial and political destinies of the two hemispheres closer together.

Aside from the impact of its flying equipment, the trip was also notable for its vivid and unique glimpses of this continent from the air and its unusual contacts with its people and leaders on the ground. Some of the air vignettes are unforgettable, the spuming white crescents and spidery white lace of Igacu Falls on the Parana River where Brazil, Paraguay, and the Argentine meet. These 17 separate falls plunging over the rock shelf dwarf Niagara and are seldom seen from a jet transport circling 1,500 feet over the green sea of jungle. The panorama of Brasilia, the new capital of Brazil being hacked from virgin soil of this vast country's interior, also unfolded on another low altitude descent. The wonder of this sight was more in how much already has been completed than in the magnitude of the job still to be done.

Later, in the cool, bright summer of Petropolis, Brazilian President Juscelino Kubitschek, with map unfolded tracing the course of his country's frontier westward, gave meaning to this milestone in his country's expansion of its westward frontier and left little doubt of his determination to merge its regional patterns into an integral nation.

SHIRTSLEEVE DIPLOMACY

At every stop—in the flowering oasis of Lima set in the arid deserts and mountains of the west coast; in the steaming heat of Rio's matchless beauty; in the park-like atmosphere of the Argentine countryside and the cosmopolitan air of Buenos Aires, the quantity and quality of local residents who turned out to met this traveling group of journalists, financiers, and businessmen was evidence of the sound sympatico relations Braniff has cultivated in the areas it serves

and the effectiveness of its shirtsleeve diplomacy.

And, nowhere, of course, is the need for expanded modern air transport greater than in the vast expanse of South America, with its paucity of good surface transport and its acute requirement to move its natural resources and raw materials to processing centers and to distribute food and goods to its population.

South America's economic development already has been aided immeasurably by the network of local and U.S.-flag airlines that now lace the Southern Hemisphere. More than 90 percent of the current air travel between North and South America is business and diplomatic. The great North American tourist market has hardly been tapped in this direction. But, just as the 300 miles per hour piston-powered transport that put Europe only 24 hours from the United States stimulated the tourist boom in that direction, so will the 500-600 miles per hour jet transport provide the impetus to open South America to a similar travel flow.

Connally Amendment

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. HOSMER. Mr. Speaker, on February 19 the Los Angeles Evening Herald Express made the following editorial comments regarding the so-called Connally amendment which have inspired much mail from home on this subject:

[From the Los Angeles (Calif.) Evening Herald Express, Feb. 19, 1960]

CONNALLY AMENDMENT

The sponsors of the current attempt to repeal the Connally amendment are playing with dangerous fire which could consume the United States in the flames of world communism.

Are the people of this country willing to take such a desperate gamble with the liberties won for us so bravely first in the Revolutionary War and protected so zealously since then in military conflict which included two World Wars?

What is the Connally amendment?

Congress accepted and passed into law in 1946 the theory of the International Court of Justice, more commonly known as the World Court, of which the United States and other United Nations countries became members.

Under the original plan, all nations would have been bound to accept decisions of this World Court respecting them, without exception.

But Senator Tom Connally saw danger in this unqualified commitment and proposed the six-word Connally amendment to provide protection for the United States against international injustice.

This specified that this country accepted jurisdiction of the World Court except in cases of a domestic nature "as determined by the United States." Those final six words quoted constitute the Connally amendment.

Other nations adopted similar protective laws for their governments.

The current move to repeal the Connally amendment, on which the Senate Foreign Relations Committee is now holding hearings, stems from a resolution introduced by Senator HUBERT HUMPHREY, Minnesota Democrat and presidential candidate.

His motion, Senate Joint Resolution 94, would force the United States to accept the compulsory jurisdiction of the World Court "in relation to any other state accepting the same obligation."

The vast majority of Americans hope continually for world peace.

But it is our belief that this is not the proper time to relax the safeguards of the Connally amendment; because no strong assurances have been given that other nations, including the Iron Curtain countries, will play fair.

Let us consider a few of the awful possibilities of what the World Court could do to the United States.

Suppose an issue would be brought before the International Court of Justice that the United States, which built and always has maintained the Panama Canal and its defenses, must relinquish all connection with the canal, turning it back to Panama or transforming it into an international project.

Suppose the difficulties between the United States and Cuba should be determined in a manner entirely inimical to the defenses of U.S. security.

Suppose the Court should attempt to ban advanced U.S. military bases around the world, at present considered the main deterrent to war.

Or determine other important world issues which could wreck this nation.

Would this not amount to national suicide?

We hope that all of our readers will take sufficient interest in this grave issue to write to their Senators and Congressmen expressing their opinions.

Tax Confusion Causes Unfair Criticism of Cooperatives

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, our farmer and consumer cooperatives, which have made such a great contribution to the economic welfare of our country, have been exposed to much criticism and adverse publicity because of the confusion over their tax status. The situation has resulted from recent court decisions which hold that patronage refunds distributed to patrons in a form other than cash are not income to the recipient unless shown to have a definite market value. These decisions are contrary to the intent of the Internal Revenue Act of 1951.

Anticooperative forces have seized this opportunity to advance tax proposals that are aimed not at tax equality, but at crippling the cooperatives. An example of this is the proposal that all cooperatives be required to refund patronage capital to patrons in cash within 3 years of receipt and to pay 4 percent cash dividends on patronage capital retained for that period.

At the February 16 meeting of the board of Dairyland Power Cooperative, La Crosse, Wis., the directors passed a resolution calling on Congress to adopt legislation to clarify the problem by stating in so many words that noncash patronage dividends are taxable to the patron in the year received. I would like to include Dairyland's resolution in the RECORD:

Dairyland Power Cooperative, through its board of directors, has reviewed the proposal of the U.S. Treasury Department to require all cooperatives to refund patronage capital to patrons in cash within 3 years of receipt and to require them to pay 4-percent cash dividends on patronage capital retained for such period.

Such a proposal is discriminatory and is obviously intended to cripple the sound operation of farmer and consumer cooperatives. It is inconceivable that it should be given serious consideration by Congressmen and Senators who appreciate the important role played by cooperatives in our rural economy.

The board of directors of Dairyland are appreciative of the criticism which may be levied at cooperatives and the income tax status of retained patronage capital as the result of court decisions, acquiesced in by the Internal Revenue Service, holding that patronage refunds distributed to patrons in a form other than cash is not income to the recipient unless shown to have a definite market value.

These court decisions, and the Internal Revenue Service regulation following them, run counter to the intention of the Internal Revenue Act of 1951 and the time-honored policy applicable to the taxation of patronage dividends distributed other than in cash.

To meet this problem, the board of directors of Dairyland Power Cooperative urges Congress to adopt legislation which would clarify the problem and expressly provide that noncash patronage dividends or refunds constituting taxable income be taxable to the patron at par in the year received. Such a provision would carry out the intent of the Revenue Act of 1951.

Illinois Court Rules Customers Should Get Benefit of Federal Subsidies to Private Power Companies

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. EVINS. Mr. Speaker, the other day I commented on the disposition that the private power companies are making of the approximately $1½ billion worth of subsidies they are receving under the accelerated amortization program. I pointed out that many of the private power companies are passing on this generous windfall to their stockholders, but that in some States the public utilities commissions are insisting that these benefits from the Federal subsidies be passed on to the customers from whose pockets the money originally came. In this connection, the Illinois Supreme Court, in a recent decision, has also agreed with this point of view as reported in the following excerpt from the weekly APPA Newsletter. Those of us who have deplored the granting of these subsidies in the first place find some satisfaction in the news that the customers will benefit from them.

The excerpt from the newsletter follows:

ILLINOIS COURT RULES RATEPAYERS MUST GET BENEFIT OF LIBERALIZED DEPRECIATION

The Illinois Supreme Court, in a precedent-setting ruling, has declared that the State commerce commission erred in allowing a water utility to charge rates which did not reflect the utility's savings through liberalized depreciation. The court's decision is expected to affect future rates of all utilities in Illinois.

The case went to the high court after the Illinois commission had granted a rate boost to the Alton Water Co. Cities and industries served by the water company intervened and opposed the 47½ percent rate increase and, when the commission ruled against them, took the issue to court.

In upholding a lower court decision, appealed by both the water company and the State commission, the supreme court declared:

"The commission allowed the company to subtract from gross income as a current expense not only Federal taxes actually paid but also an amount equal to the saving produced by the use of accelerated depreciation—that is, the difference between actual taxes and the taxes which would have been due if normal straight-line depreciation had been employed. This amount is credited to a special account which may not be used for dividend distribution to shareholders or transferred to surplus.

"We agree with the lower court that the commission's approach was erroneous and that only actual tax expenses should have been allowed," the supreme court said.

Noting that these reserve funds could be used for plant expansion and that the resulting new properties "would presumably be included in the rate base," the court said: "Consumers will then be forced not only to contribute the prepayments but to pay a return on them for the benefit of the shareholders, who will thus receive a return on money they did not invest in the company. This result cannot be approved."

The court noted that the liberalized depreciation section of the tax law is intended to stimulate expansion "particularly in high risk, growing and small businesses." Since utilities are allowed a rate of return "calculated to attract the capital required for necessary expansion * * * the purpose of section 167 would not be thwarted nor would discrimination be introduced into the Federal tax law by requiring utilities to pass the savings of accelerated depreciation on to its customers."

Figures compiled by the Federal Power Commission show that five private power companies in Illinois have collected $25.5 million more in taxes from their consumers than they have paid to the Federal Government, by using section 167 of the Federal tax law. In addition, these five companies, plus another small utility, have collected an additional $13 million from their consumers, by using defense-related fast tax writeoffs, under section 168 of the Internal Revenue Code.

The total accumulated tax deferrals—which the Illinois Supreme Court in the recent water company decision called a forced, interest-free loan from the present consumers for the benefit of the utility—for these companies at the end of 1958 under both sections 167 and 168 are: Central Illinois Gas & Electric Co., $1,744,969; Central Illinois Light Co., $3,013,000; Central Illinois Public Service Co., $2,553,000; Commonwealth Edison Co., $20,920,000; Illinois Power Co., $10,224,000; and Mount Carmel Public Utility Co., $54,765.

Book Review: "Communist China and Asia"

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. PORTER. Mr. Speaker, our China policy must be changed drastically—and soon. It is leading us away from effective controlled disarmament and toward World War III. The Conlon report to the Senate Foreign Relations Committee last November made this clear. So, apparently, does A. Doak Barnett, a leading authority in this field, in his just-published book, "Communist China and Asia," published for the Council on Foreign Relations by Harper & Bros., New York.

Under a previous consent I am including herein the review by Henry R. Lieberman from the New York Times book review section, February 28, 1960. Mr. Lieberman was a Far Eastern correspondent for 12 years following World War II and is now assistant foreign news editor of the Times. His review follows:

THE PROBLEM WHOSE NUCLEUS IS PEIPING—REVIEW OF BOOK ENTITLED "COMMUNIST CHINA AND ASIA," BY A. DOAK BARNETT

(By Henry R. Lieberman)

This is clearly one of the best analytical reports on Comunist China and Asia that has yet appeared in print. It may even be the best.

A. Doak Barnett's book is no journalistic "quickie." Published under the auspices of the Council on Foreign Relations, it is a solid piece of work by an American who was born in China, who has spent years traveling in and around that country both as a student and reporter, who has supplemented this with extra research, who thinks clearly, writes lucidly and who has no particular ax to grind.

Mercifully, Mr. Barnett comes at the reader not with pitchforks, but with documented facts and plausible, if sometimes arguable, conclusions. Although he has his own views of American China policy, and states them forcefully, he has not ignored other views based on the same facts.

In developing his analysis of the challenge posed by the Chinese Communists in Asia, Mr. Barnett makes these key points:

1. There is considerable evidence of disaffection in Red China, but the Peiping Government has established tight authoritarian control, and there are no indications that its rule is under serious domestic threat.

2. Peiping's leaders are determined that Red China shall play the role of a great power. They are making every effort to develop rapidly China's industrial, scientific and military capacities.

3. The Sino-Soviet alliance is not monolithic; there have been signs of differences between Peiping and Moscow. But the available evidence in recent years indicates a strengthening rather than weakening of this Communist Axis, and there seems little immediate prospect of an open split.

4. The United States and other non-Communist nations are involved in a long-term struggle with Red China throughout Asia. A heavy commitment of American resources, "intellectual and moral as well as material," will be required to check Peiping's spreading influence and shore up non-Communist Asian states.

Red China's weltanschaung, as examined by Mr. Barnett, envisages a continuing worldwide struggle between the forces of communism and the forces of "imperialism" (noncommunism). Generally, he notes, Peiping tends to regard the world as split into three main groups: the Communist bloc, the newly independent uncommitted countries and the imperialist bloc led by the United States.

While seeking to curry favor with the neutralist nations, and sometimes falling over its own feet in the process—as in the cases of India, Indonesia and Burma—Red China looks upon the United States as the "No. 1 enemy" and the prime target for all Communists. Mr. Barnett notes in his analysis that Peiping is determined not only to absorb United States-supported Taiwan as part of Communist China, but also to drive United States influence from Asia.

"The prospect of a prolonged struggle between the United States and Communist China is not a comforting one, especially for those Americans who seek quick solutions to all international problems," he writes. "Yet, this is what the immediate future holds. The best that the United States can hope for is that this struggle can be waged primarily by nonmilitary means, and if the United States acts wisely and effectively, this seems to be at least possible."

On the controversial issue of U.S. recognition of Red China, Mr. Barnett points out that the extreme views expressed on both sides of this question have tended to obscure the more important long-term question of how to deal with the China problem. Thus far, we have applied what he calls a policy of limited pressure. Mr. Barnett suggests that a two-China policy coupled with a policy of strong American support of non-Communist Asian states might achieve more effective results. The two-China idea involves international acceptance of two Chinese Governments: one in Peiping, controling mainland China; the other in Tapei, controlling the Taiwan and the Pescadores.

As part of the two-China approach, Mr. Barnett proposes effective action to persuade the Chinese Nationalists to evacuate the offshore islands they hold near mainland China. But he advocates continued rejection of Peiping's claim to Taiwan itself, and he calls for efforts to induce some of the United States' allies to commit themselves to the defense of Taiwan.

Mr. Barnett emphasizes the need to bring American China policy more closely in line with the approaches of other non-Communist countries as a means of making our China policy more effective. He also urges increased efforts to open up certain channels of nonofficial contact with Red China and the gradual relaxation of existing restrictions on trade, except for strategic goods.

None of these moves would solve the basic problem, Mr. Barnett concedes. He feels, however, that such steps could reduce many of the dangers and bring about wider international support for the American position in Asia.

He writes: "American policymakers have reacted strongly against the oft-made charges that they have been 'inflexible' in their approach to China policy. In practice, however, they have consistently maintained in recent years that any substantial change of any important aspect of American policy toward China would result in undermining

the whole policy, thus weakening the entire non-Communist position in Asia."

In this reviewer's mind, there is still a question about the wisdom of our forcing a Nationalist evacuation of the "offshore islands" before the achievement of some kind of modus vivendi settlement along the China coast.

The fact remains, nevertheless, that Mr. Barnett has done an excellent job. Perhaps the chief value of his book is that it provides an authoritative background and unemotional setting for further intelligent discussion of the China problem.

Educational Readjustment Assistance to Veterans Who Serve in the Armed Forces Between January 31, 1955, and July 1, 1963

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FLYNN. Mr. Speaker, soon there will come before the House for consideration a Senate-passed bill, S. 1138, which provides educational and vocational training, rehabilitation training for service-connected disabilities, and loans for homes, farms, livestock, farm machinery, and otherwise closely parallels the World War II and Korean GI bills. The principal feature of this bill is the educational opportunity it will afford our young men and women who serve in the military service of their country during the peacetime years of 1955 through 1963.

Testimony before the House Veterans' Affairs Committee has clearly shown the greatest asset this country has is the brains and intellectual potential of its young people. Failure of the United States to develop the minds and skills of its young and strong is one of the greatest crimes of our age. Testimony has shown that this country will, in the very near future, be repaid in full for all expense it was put to in providing educational training for the GIs of World War II and Korea. Yet this investment will continue to produce a financial, productive, and technological return for the next 30 years or more. The Senate has seen the wisdom of enabling ex-GI's to gain an education with Government help—yet there are powerful forces, including the Departments of Defense and Health, Education, and Welfare, which oppose this legislation.

The Defense Department opposes it maintaining it tends to cause some enlistees or draftees not to reenlist. They have found, in the past, that 45 percent of those separating from the service did so to take advantage of educational opportunities afforded by the GI bill of rights I believe this is a wonderful tribute to modern American youth who have the desire to learn and be of greater value to themselves, their families and their country. On the basis of testimony offered by the Defense Department, approximately 100,000 young men are being inducted into service each year. The majority of these men receive from 9 to 21 weeks of technical training. About 50 percent of those trained are in the lower schools and 50 percent are in the higher technical schools, such as electronics and mechanics.

Would it not be a wonderful thing to permit young men who have served and will serve their country in the next few years to go on to college under the GI bill of rights and equip themselves to render greater service to their country and to their home communities? The cost to the Government would be slight and the Government would get it back many times over during the lifetime of the GI's benefited. It is narrow thinking on the part of the Defense Department officials to deny boys and girls who have served their country the opportunity of finacial assistance toward an education, merely because the various branches of the military do not want to be bothered with training new recruits to take the place of those who leave to go back to school.

I am hopeful that Members of this House will acquaint themselves with the provisions of S. 1138, passed by the Senate on July 21, 1959, and make it possible for GI's and WAC's to secure a higher education.

The Need for Outside Help in Cleaning Up Water Pollution

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 29, 1960

Mr. STRATTON. Mr. Speaker, when I voted on last Thursday to override President Eisenhower's unfortunate veto of H.R. 3610, the bill that would have made a modest increase in annual funds available to help local communities in building sewage treatment facilities to end pollution of our Nation's lakes and rivers, I pointed out the serious squeeze confronting at least three major cities in my own district in upstate New York—Amsterdam, Gloversville, and Johnstown.

These cities have been ordered by the State of New York to construct costly sewage treatment plants before a fixed deadline. Yet in each case the local tax revenues to underwrite such construction are simply not available, and the State has offered no financial assistance to help these communities carry out the State's own mandate.

Hence, either the Federal Government steps in to help these local communities help themselves in meeting their serious pollution problems, or else the needed sewage treatment facilities just don't get built. It's as simple as that. What these cities face, Mr. Speaker, is not a theory but a condition. With the knowledge they might be able to get some modest Federal help in meeting their problem, they would have been stimulated to move ahead to help themselves and finance their own local share. Without such help their financial problem is almost insurmountable and their river and streams will have to remain polluted.

It is true, of course, that in spite of the President's veto the present program of Federal assistance will continue in effect with annual appropriations expected at the rate of some $45 million a year—of which roughly $2.7 million will be allocated for projects in New York State. But the backlog of requests for such help is already so great that chances of any one city getting help from these limited funds within the foreseeable future are slim indeed.

Mr. Speaker, to point up the urgent need of these cities I have the honor to represent, a need which prompted me to try to try to help them by supporting the expanded program the President rejected, I desire to include herewith editorials from the Amsterdam Evening Recorder of February 26 and the Gloversville Leader-Herald of February 25 which discuss this situation objectively and certainly from a most nonpartisan point of view.

The editorials follow:

[From the Amsterdam Evening Recorder, Feb. 26, 1960]

OUR POLLUTION PROBLEM

The current session of Congress has suffered its first veto. President Eisenhower rejected the bill which would have increased Federal appropriations to deal with stream pollution.

Ending water pollution is an essential matter. Carelessness in the past has permitted many of our streams to become so contaminated that even fish shun them. But the expense involved creates a problem for which no one has offered a solution.

For several communities in our area the pollution problem is of paramount importance. The Mohawk River has been adjudged polluted to the point where it constitutes a health menace. Communities along its banks discharge untreated sewage in such quantities that the stream, noted for its natural beauty, has become an exposed sewer.

A solution is possible through only one effective means. This sewage must be treated in disposal plants which eliminate health hazards. But such plants would represent tremendous expense. So much so that more than one community in this part of the Mohawk Valley would face bankruptcy if they were compelled to finance construction of disposal plants at this time.

Since stream pollution is a locally created problem, the President feels that it should be eliminated through local efforts. There are many who will agree with that point of view.

That might answer the question as to "why" responsibility for pollution abatement rightfully reverts to the communities directly involved. But the answer as to just how they are going to solve the problem without State or Federal help is no clearer now than it was when the original cleanup edict was issued in Albany.

[From the Gloversville Leader-Herald, Feb. 25, 1960]

WATER POLLUTION SHOULD CONCERN PUBLIC

By the time this appears in print, the question of increased Federal aid to battle water pollution may be academic. The

House of Representatives was scheduled to vote today on overriding President Eisenhower's veto of the $900 million water pollution control bill.

If the veto is overridden in the House, it should be good news to the officials of a number of area communities who are gathering tonight in Johnstown to discuss the water pollution situation. Naturally, Johnstown and Gloversville are as vitally concerned as any of the other communities.

The legislation the President vetoed would have continued and broadened the original 1956 Water Pollution Act, raising from $500 million to $900 million the amount of Federal funds that could have been spent at the rate of $90 million yearly to help States and local governments construct sewage disposal plants.

President Eisenhower feels that the water pollution control program must be henceforth a financial concern principally of the States and communities concerned.

Politics is involved in today's scheduled effort to override the veto. The Democrats believe there will be public reaction to the Republican votes that back up the veto. There won't be that reaction locally as our Representative already has said he will vote to override the veto which he has described as "completely ill-advised and mistaken."

It is doubtful, though, that the reaction will be so great that water pollution becomes even a fair-sized political issue in the coming election. The apathy of the public, even within the Glove Cities, to water pollution control measures has been tremendous. The attitude has not been any healthier than the pollution itself.

In any event, the officials assembling in Johnstown tonight know they have a serious problem on their hands. It's too bad they aren't meeting at a time they are assured greater Federal aid to solve their pollution problems. But let's wish them well and hope they make progress.

Workers are Slaves in Castro's Cuba

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a revealing report made by the United Press International, dateline, Havana, Cuba, February 13, 1960. This dispatch, which was brought to my attention by a specialist on inter-American history, the Reverend Father Joseph F. Thorning, Ph. D., D.D., associate editor of World Affairs, illustrates the new industrial slavery which is being imposed upon Cuban workers by Fidel and Rául Castro, military dictators.

The report follows:

HAVANA, February 13, 1960.—The Cuban Government today assumed the task of hiring and firing workers in private industry. Moreover, it demanded that, in the future, private business firms give an accounting to the Labor Ministry of all such work contracts and dismissals, none of which can have validity without the approval of the aforesaid ministry.

At the same time, the Cuban Government decreed limitations upon personal employment. Employers cannot give a job to any worker who is not inscribed in the "Labor Market." Moreover, he must have a certificate from that agency. The worker, for his part, can enroll himself only once and, upon obtaining employment, he cannot seek a job anywhere else.

The Labor Minister, Augusto Martínez Sánchez, in a TV speech last Sunday, declared that, in the future, no one could be dismissed from a job without the authorization and approbation of his ministry.

NOTE.—It was Labor Minister Augusto Martínez Sánchez who, at the time Secretary of State Christian A. Herter was expressing satisfaction that no insults had been hurled at the United States of America by Fidel Castro "for the last 3 days," described the officials and people of the United States of America as "vultures."

Of Cabbages and Kings

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish to introduce into the RECORD a column which appears regularly in the East Oregonian, of Pendleton, Oreg. This column is written by my friend, Bud Forrester, and in this one he deals with the problem of outdoor advertising, a subject of interest to all of us:

OF CABBAGES AND KINGS
(By J. W. F.)

"The time has come," the Walrus said, "To talk of many things: Of shoes, and ships, and sealing wax—of cabbages and kings—"

The controversy about whether outdoor advertising should be allowed along Federal highways has been going on for some time in the U.S. Senate. It has spread to the State of Oregon and you will hear much more of it before the year is out. It undoubtedly will appear on your ballot this year.

In the February issue of Harper's magazine, a San Francisco advertising agency executive has written, and extremely well, his thoughts on outdoor advertising. He begins: "It is so strange that billboards exist at all that the current controversy about whether outdoor advertising should be allowed along Federal highways achieves the unreality of a debate on whether witch-burning should be permitted in critical fire areas. Apparently no one has thought to wonder just what in h— billboards are doing anywhere.

He quickly tells us that more and more people are wondering what billboards are doing anywhere and he flatly predicts that the days of billboards are numbered.

He explains why billboards have survived so well against attack—because the attacks have been made on the wrong grounds. "Almost the only argument," he says, "against outdoor advertising one ever seems to hear is that it blocks out the scenery and is unsightly." He argues that this is a mistake: "Do you see why it is a mistake to attack outdoor advertising on aesthetic grounds? The row then becomes a matter of comparative beauty and one can go on haggling about that forever. It is like arguing that mice should be kept out of the kitchen because they don't match the formica. What a billboard looks like has nothing to do with whether it should be there."

He tells us that the outdoor advertising business claims it has two fundamental rights. In the first place, it invokes the spirit of free enterprise. He writes: "Outdoor advertising is, of course, a business, and as such would ordinarily have a strong case against inroads on its domain. However, there is a very real question whether it has a title to its domain. Outdoor advertising is peddling a commodity it does not own, and without the owner's permission: your field of vision." He explains that while it may be contended that everything visible violates one's airspace that that isn't so. Many things that violate your vision are there for a specific and necessary purpose. He says a billboard is there for the sole and express purpose of trespassing on your field of vision; it has no other purpose.

Outdoor advertising's second line of defense is that what discriminates against one advertising medium discriminates against all advertising medium. Of this the writer says:

"What is the difference between seeing an ad on a billboard and seeing an ad, even the same ad, in this magazine? The answer, in a word, is permission—or in three words, freedom of choice. Through a sequence of voluntary acts you have given the magazine advertisement permission to be seen by you. You bought the magazine of your own volition; you opened it at your own pleasure, you flipped or did not flip through it; you skipped or did not skip the ads; finally it is possible to close the magazine entirely. You exercise freedom of choice all down the line. The same is true of advertisements in newspapers. It also is true of radio and television commercials.

"You cannot throw U.S. 40 out of the window if you are on it. Nor can you flip a billboard over."

Finally, the writer says, "Outdoor is not an advertising medium; it is isolated advertising. An advertising medium is a medium which incidentally carries advertising, but whose primary function is to provide something else: entertainment, news, matches, telephone listings, anything. I'm afraid the poor old billboard doesn't qualify as a medium at all; its medium, if any, is the scenery around it and that is not its to give away. Nor is a walk down the street brought to you by the courtesy of outdoor advertising."

We have quoted from this article at length because you are going to hear these points argued over and over again.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.
